- providing leadership to others when managing international freight transfer operations
- reading and interpreting instructions, procedures, information and labels relevant to managing international freight transfer operations
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and applying appropriate technology, information systems and procedures when managing international freight transfer operations
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of relevant Australian Standards and associated certification requirements
- contacts and sources of information/documentation needed when managing international freight transfer systems
- operational requirements for the safe transfer and storage of dangerous goods and hazardous substances
- operational work systems, resources, management and workplace operating systems
- procedures for establishing and monitoring suitable international freight transfer operations
- procedures for liaising with relevant Australian and international contacts using appropriate technology
- procedures for reviewing options for international freight transfer systems
- procedures for identifying and evaluating information needed to manage the international transfer of freight
- procedures for identifying and interpreting requirements of current and potential clients
- quality and customer service policies and procedures
- relevant Australian and international regulations, codes of practice and legislative requirements including local and international freight regulations
- relevant permit and licence requirements
- relevant workplace documentation procedures applicable to the international transfer of freight.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations

- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIA5058 Manage facility and inventory requirements

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to manage a facility and its inventory requirements, in various contexts within the transport and logistics industry.

It includes identifying space, safety and security requirements; developing a documentation system; designing storage zones and evaluating facility utilisation.

This unit generally applies to those who provide leadership of others individually or in teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

A – Handling Cargo/Stock

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify space requirements

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Organisational medium-term and long-term storage needs are assessed to facilitate planning, in accordance with the enterprise business plan and legislative requirements

- 1.2 Product type, picking frequencies, value, fragility, weight, handling characteristics, quantity and holding periods are assessed to consider type and amount of storage
  - 1.3 Facility is assessed to determine stock holding and handling requirements for each inventory item
  - 1.4 Volume requirements are calculated to ensure ongoing stock holding needs are met
  - 1.5 Total space requirement is calculated and used to formulate a space utilisation plan
- 2 Identify safety and security requirements**
- 2.1 Assessment is made of risks to ensure maximum safety and security for personnel, stock and facilities
  - 2.2 Storage handling security and incident/emergency procedures for each class or type of product are identified and documented
  - 2.3 Fire prevention and firefighting systems are identified in accordance with building code regulations and storage material requirements
  - 2.4 Evacuation plan is developed in accordance with the enterprise safety program
- 3 Develop and implement documentation system**
- 3.1 System for recording and tracing stock location, receipt, throughput and despatch is developed and implemented to enable reporting, quality assurance and financial requirements to be met
  - 3.2 System for recording communication with carriers, customers and employees is developed and implemented to assess operational effectiveness and to provide data for system improvement
- 4 Design storage zones**
- 4.1 Space requirements and equipment operation are accurately assessed to facilitate warehouse zone planning
  - 4.2 Assessment is made of the facility to enable the most effective use of available space
  - 4.3 Positioning of storage areas, bays, work stations and the like is undertaken in accordance with planning process data
  - 4.4 Provision for maintenance and cleaning is catered for
- 5 Evaluate facility**
- 5.1 Continual system of review is used involving regular checks to ensure storage areas and systems are functioning at

**utilisation**

optimum levels

- 5.2 Receiving and despatching systems are assessed to ensure they provide efficient operations
- 5.3 Storage and handling systems are assessed to ensure they provide ease of access and comply with ergonomic principles
- 5.4 Product handling and storage process are assessed to ensure minimisation of product damage, contamination and stock losses
- 5.5 Flexibility of facility layout to meet changing storage and handling requirements is maintained
- 5.6 Appropriate reporting systems are established and used to capture and maintain data to design improved facilities and systems

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIA5058A Manage facility and inventory requirements.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIA5058 Manage facility and inventory requirements

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when managing facility and inventory requirements
- developing and implementing contingency plans
- prioritising work and coordinating the work of others
- providing leadership to others when managing facilities and inventory requirements
- reading and interpreting plans, diagrams, regulations, codes of practice and other documentation relevant to managing facilities and inventory requirements
- reporting and/or rectifying identified problems promptly
- selecting and applying appropriate technology, information systems and procedures when managing facility and inventory requirements.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- enterprise business policies and plans including procedures for facility operations
- operational warehouse systems, resources, management and workplace operating systems
- principles, purpose and location of controls, monitoring devices and systems
- procedures for managing and controlling hazardous situations when carrying out work activities, particularly those that relate to storing materials

- procedures for operating electronic communications equipment
- relevant sections of national and state/territory regulatory requirements and codes of practice, including applicable facility fire safety and building regulations
- requirements for completing relevant documentation
- selection and appropriate application of technology, information systems and procedures
- throughput and storage requirements for specific types of inventory.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIB0117 Assist with preparation of a train prior to operation

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to assist with the preparation of a train prior to operation in accordance with organisational procedures, and the requirements of relevant safeworking rules and codes of practice.

It includes preparing for and implementing the prescribed pre-departure checks, completing required train documentation and confirming the train can proceed.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed in conjunction with a train driver. It involves the application of routine operational principles and procedures when preparing for train operations, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Prepare for pre-departure checks**

1.1 Required checks and relevant procedures and standards are identified

1.2 Purpose of the journey and activities to be undertaken are identified

1.3 Constraints and special instructions that may apply for the journey are identified

1.4 Hazards are identified, risks are assessed and risk control measures are implemented

1.5 Documentation is read to identify and confirm consist, attach/detach information and characteristics of the train

### **2 Implement pre-departure checks**

2.1 Train, or relevant portion of the train, is checked to ensure that rolling stock is coupled and sequenced correctly

2.2 Rolling stock is checked to ensure it is fit for operation in accordance with regulatory requirements and organisational procedures

2.3 Assistance is provided when train braking systems are tested to ensure they are operating effectively

2.4 Visual inspection is conducted to identify obvious faults or defects that would prevent safe transit

2.5 Action is taken within limits of own role to rectify faults and ensure minimum delay to planned running schedule

2.6 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are followed to prevent injury and damage

### **3 Confirm train can proceed**

3.1 Documentation is completed after checking rolling stock and train equipment in accordance with organisational procedures

3.2 Relevant personnel are promptly advised of the result of completed checks

3.3 Authority to proceed relevant to the operational situation is obtained and followed

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB0117A Assist with preparation of a train prior to operation.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB0117 Assist with preparation of a train prior to operation

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- carrying out all pre-departure checks in accordance with workplace procedures
- communicating effectively with others when preparing a train for operation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying typical faults and defects for the type of rolling stock being operated
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and rectifying within limits of own role identified problems, faults and malfunctions, in accordance with workplace procedures
- testing braking systems in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements and relevant codes of practice and/or guidelines
- contingency management processes
- emergency procedures
- pre-departure train testing procedures
- procedures for preparing a train for operation
- relevant methods to overcome identified faults and defects
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- safeworking systems and requirements
- train characteristics and specifications
- train coupling equipment and methods
- train preparation documentation procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIB0127 Certify rolling stock prior to handover

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to certify rolling stock as fit for purpose in accordance with relevant organisational procedures, rail industry standards, rules, regulations and codes of practice.

It includes completing certification and documentation in accordance with organisational or client requirements.

This unit applies to workers required to carry out these activities as part of a maintenance role within a defined location on behalf of their own or a client's organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

## **1 Complete certification requirements**

- 1.1 Certification requirements for particular rolling stock are confirmed by reference to applicable specifications
- 1.2 Planned activities are identified in accordance with organisational procedures
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Completed maintenance activities are verified against planned activities
- 1.5 Completed maintenance activities are validated as required in accordance with organisational procedures
- 1.6 Where maintenance activities are not completed an assessment is carried out to confirm rolling stock is fit for purpose in accordance with organisational procedures
- 1.7 Completed maintenance activities are confirmed against operational performance requirements
- 1.8 Certificate is issued in accordance with organisational procedures

## **2 Complete documentation**

- 2.1 Required documentation procedures and processes are confirmed
- 2.2 Documentation is filled in legibly and proofread, in accordance with organisational procedures and regulatory requirements
- 2.3 Required documentation is archived in accordance with organisational procedures and regulatory requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIB0127A Certify rolling stock prior to handover.

## **Links**

Companion Volume implementation guides are found in VETNet -

# TLIB0128 Conduct pre-movement checks on motive power units

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to conduct pre-movement checks on motive power units in accordance with relevant organisational procedures, rules and codes of practice.

It includes conducting pre-start checks, and starting and positioning motive power units in accordance with workplace requirements.

This unit applies to people required to carry out these activities as part of a maintenance role within a defined location.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Carry out pre-start checks**
  - 1.1 Allocation of motive power units is checked in conjunction with appropriate personnel
  - 1.2 Motive power unit to be inspected and prepared is located
  - 1.3 Completion of all maintenance activities is confirmed
  - 1.4 Checks for safety controls are conducted in accordance with organisational procedures
  - 1.5 Internal and external integrity checks are conducted in accordance with organisational procedures
  - 1.6 Fluid levels are checked and appropriate action is taken as required
- 2 Start motive power unit**
  - 2.1 Motive power unit is started in accordance with manufacturer instructions and/or organisational procedures, and faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up
  - 2.2 Hazards are identified, risks are assessed and risk control measures are implemented
  - 2.3 For critical or serious equipment faults that cannot be readily rectified, motive power unit is shut down, faulty equipment is isolated and tagged, and problem is reported for rectification
  - 2.4 All instruments and gauges are observed, readings are interpreted to confirm effective air and electrical operation, and where a problem is indicated, action is taken to determine the cause and to rectify or report the situation
  - 2.5 Fluid levels are rechecked after starting and appropriate action is taken as required
  - 2.6 Pre-movement checks are carried out to ensure motive power unit is braking and powering effectively and is safe to move
- 3 Complete documentation**
  - 3.1 All required documentation concerning inspecting the motive power unit is completed and processed in accordance with organisational procedures and regulatory requirements
  - 3.2 Logbook and other maintenance records on the motive power unit are completed and processed in accordance with organisational procedures and regulatory requirements
- 4 Position motive power unit**
  - 4.1 Authority to move and position motive power unit is obtained and relevant personnel are advised of intention and procedures

- 4.2 Relevant personnel are made aware that motive power unit is about to be moved in accordance with organisational procedures
- 4.3 Motive power unit is operated in accordance with standard procedures and regulatory requirements, and within operating and operational constraints
- 4.4 Motive power unit is positioned in accordance with operational requirements and directions
- 4.5 Motive power unit performance is monitored during operation to confirm effective operation and/or to identify defects
- 4.6 Equipment defects are identified, reported, rectified and recorded or relevant personnel are advised for assistance
- 4.7 Relevant work health and safety (WHS)/occupational health and safety (OHS) and regulatory requirements are followed to ensure safety and to prevent injury and damage
- 4.8 Relevant personnel are advised that the motive power unit is secured in the required position and is ready for service

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB0128A Conduct pre-movement checks on motive power units.

## Links

Companion Volume implementation guides are found in VETNet -

# TLIB0132 Start up and shut down a single locomotive

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to start up and shut down a single locomotive.

It includes inspecting, preparing and starting up a single locomotive; conducting in-cab and post start-up checks; completing start-up documentation; stabling locomotive; and carrying out post-operational checks.

Locomotives may include:

- diesel locomotives
- electric locomotives
- railcars.

This work is conducted as part of operating locomotives and may be carried out by different personnel working within rail operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Inspect and prepare locomotive**

- 1.1 Identification and location of locomotive is confirmed
- 1.2 Logbook and locomotive are checked for out of service indications and to confirm serviceability
- 1.3 Locomotive kit and equipment are checked as required, and defects and deficiencies are recorded and rectified, isolated, tagged or reported as required, in accordance with organisational procedures
- 1.4 Fuel, lubricating oils, water, coolant and sand equipment are checked as required and then replenished as required, in accordance with manufacturer and/or organisational procedures
- 1.5 Hazards are identified, risks are assessed and control measures are implemented
- 1.6 External visual checks are conducted in accordance with manufacturer and/or organisational policies and procedures

#### **2 Start up locomotive**

- 2.1 Locomotive is started in accordance with manufacturer instructions and/or organisational procedures
- 2.2 Operating faults are identified, diagnosed, rectified and/or reported and recorded in appropriate records
- 2.3 All instruments and gauges are observed and readings are interpreted to confirm effective operation in accordance with manufacturer and/or organisational procedures
- 2.4 Fluid levels are rechecked after starting, as required, and appropriate action is taken as required

#### **3 Conduct in-cab checks**

- 3.1 Locomotive in-cab checks are conducted in accordance with manufacturer and/or organisational policies and procedures
- 3.2 Vigilance and safety controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly
- 3.3 Communications equipment is checked to ensure it is functioning correctly and appropriate action is taken if it is not

- working correctly
- 3.4 Personal in-cab equipment and crew comfort requirements are checked and adjusted for correct functionality and comfort
  - 3.5 Auxiliary and emergency equipment is checked and confirmed to be operational in accordance with operating requirements
- 4 Conduct post start-up checks**
- 4.1 Post start-up checks are carried out to ensure locomotive is braking and powering effectively and is safe to move, in accordance with manufacturer and/or organisational policies and procedures
  - 4.2 Communications equipment is obtained and checked, as required, to ensure it is functional
  - 4.3 Pantographs are raised or lowered and confirmed to be operational, as required, in accordance with manufacturer instructions and/or organisational procedures
- 5 Complete start-up documentation**
- 5.1 All required documentation concerning inspecting the locomotive is completed and processed in accordance with organisational policies and procedures
  - 5.2 Logbook and other locomotive service records are completed and stored in accordance with organisational policies and procedures
- 6 Stable locomotive**
- 6.1 Location for stabling locomotive is identified and confirmed with appropriate personnel
  - 6.2 Directions of appropriate personnel are interpreted and followed as required
  - 6.3 Locomotive is stabled and shut down in accordance with manufacturer and/or organisational procedures
  - 6.4 Locomotive is secured in accordance with organisational policies and procedures
  - 6.5 Control equipment and cab are secured in accordance with organisational policies and procedures
  - 6.6 Additional protection is set in place as required, in accordance with organisational policies and procedures
- 7 Carry out post-operational checks**
- 7.1 Fuel, oil, water and sand levels are checked as required and then replenished as required
  - 7.2 Outcomes of post-operational checks are recorded and

processed in accordance with organisational policies and procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIB0132A Start up and shut down a single locomotive.

## **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB0132 Start up and shut down a single locomotive

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in locomotives and associated equipment and procedures
- communicating effectively with others
- completing all pre start-up checks on a locomotive
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures and information and signs.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- auxiliary systems on a locomotive, and related checks and workplace procedures
- braking and safety system procedures for a locomotive
- defects that can occur on a locomotive and related action that should be taken
- external features of a locomotive that must be checked during a visual inspection
- functions of all supervisory indicators and controls, and related checks for correct operation
- inspection procedures for a locomotive
- lubrication requirements for a locomotive
- procedures and required protocol for operating electronic communications equipment
- purpose and location of controls, monitoring devices, braking, power source and traction systems

- relevant state/territory legislated rail safety requirements, codes of practice and/or guidelines
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIB1024 Clean transportation units and facilities for passenger use

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to clean transportation units and facilities for passenger use in accordance with workplace and codes/regulatory requirements as part of work activities within the transport and logistics industry.

It includes identifying and preparing for cleaning, cleaning the facility or unit, identifying minor maintenance requirements of transportation units and facilities, and completing all work requirements.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Identify and prepare for cleaning**
  - 1.1 Transportation units and facilities are inspected for hygiene and cleanliness on an ongoing basis
  - 1.2 Customer complaints regarding lack of hygiene and cleanliness within transport units and facilities are investigated
  - 1.3 Transport units or areas requiring cleaning and the nature of the material to be cleaned is identified to determine appropriate response
  - 1.4 Cleaning procedures are identified, and cleaning materials and equipment are organised in accordance with workplace procedures
  - 1.5 Areas that require cleaning that breach work health and safety (WHS)/occupational health and safety (OHS) regulations or workplace standards are cordoned off to prevent access by staff and customers
- 2 Clean facility or unit**
  - 2.1 Transportation units and facilities are cleaned or detailed to workplace standards
  - 2.2 Cleaning equipment is operated in accordance with WHS/OHS regulations, codes of practice, and workplace procedures
  - 2.3 Chemicals are used in accordance with WHS/OHS legislation, codes of practice, policies and procedures
  - 2.4 Hazardous and general waste is removed in accordance with WHS/OHS regulations, codes of practice and workplace procedures
- 3 Identify minor maintenance requirements of transportation units and facilities**
  - 3.1 Transport units and facilities are inspected to identify maintenance requirements
  - 3.2 Minor maintenance of transport units and facilities is conducted in accordance with workplace policies and procedures
  - 3.3 Minor maintenance actions are reported in accordance with workplace procedures
  - 3.4 Further maintenance requirements of transport units or facilities are reported in accordance with workplace procedures
- 4 Complete the work**
  - 4.1 Cordoned off area is re-opened for use when safe for staff

and customer access

- 4.2 Transportation units/facilities cleanliness and appearance is verified prior to being released for service
- 4.3 Cleaning equipment stocks are monitored and replenished as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB1024A Clean transportation units and facilities for passenger use.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB1024 Clean transportation units and facilities for passenger use

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist when cleaning transportation units and facilities
- applying relevant legislation and workplace procedures in reference to cleaning transportation units and facilities for passenger use
- communicating and working effectively with others when cleaning transportation units and facilities
- completing documentation related to work activities
- demonstrating an understanding of work health and safety (WHS)/occupational health and safety (OHS) requirements for cleaning transportation units and facilities
- demonstrating an understanding of WHS/OHS requirements for cordoning off an area to the public when cleaning transportation units and facilities
- handling and storing hazardous substances and materials
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communication equipment to required protocol
- reading, interpreting and following instructions, procedures, information and signs relevant to cleaning transportation units and facilities
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and safely using relevant equipment and materials when cleaning transportation units and facilities
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- selecting, mixing and applying appropriate cleaning materials
- working systematically with required attention to detail without injury to self or others,

or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communication requirements when cleaning transportation units and facilities
- documentation and record requirements
- equipment, chemicals and materials used when cleaning transportation units and facilities for passenger use, and the precautions and procedures to be followed in their use
- housekeeping standards and procedures
- operational work systems, equipment, management and site operating systems for cleaning transportation units and facilities for passenger use
- problems that may occur when cleaning transportation units and facilities, and appropriate action that can be taken to resolve these problems
- regulations relevant to cleaning transportation units and facilities for passenger use including, where relevant, the Australian Dangerous Goods (ADG) Code and relevant health and hygiene requirements
- relevant WHS/OHS and environmental protection procedures and guidelines
- site layout
- workplace procedures and policies for cleaning transportation units and facilities for passenger use, including discharging waste and charging water containers.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIB1028 Maintain and use hand tools

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to maintain and use hand tools in accordance with workplace procedures and safeworking codes across a variety of operational workplace contexts within the transport and logistics industry.

It includes selecting and using hand tools to complete workplace tasks, maintaining basic hand tools in accordance with manufacturer's instructions, and securing and storing hand tools in accordance with workplace procedures.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Select and use

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Correct tools are chosen to complete workplace tasks and to

- hand tools** ensure efficient and safeworking conditions
- 1.2 Appropriate personal safety protection is used to minimise personal injury risk
- 2 Maintain hand tools**
- 2.1 Equipment is cleaned and maintained in accordance with manufacturer's specifications and/or local instructions to ensure correct functionality of equipment
- 2.2 Unserviceable tools are repaired, replaced or reported to relevant personnel to ensure correct functionality
- 3 Secure and store hand tools**
- 3.1 Tools are transported in a safe, secure, efficient manner to minimise risk of injury to personnel and damage to equipment
- 3.2 Tools are stored and secured according to manufacturer's or workplace procedures to prevent damage to, and losses of, equipment

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB1028A Maintain and use hand tools.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB1028 Maintain and use hand tools

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- identifying, selecting, and efficiently and effectively using relevant hand tools and related materials
- reading, interpreting and following relevant instructions, procedures, information and signs.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- emergency procedures
- materials for maintaining and using hand tools and the procedures and precautions for their care, use and storage
- problems that can occur maintaining and using hand tools and related action that should be taken
- relevant work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- relevant sections of state/territory regulations, codes of practice and safeworking system requirements
- workplace documentation and records requirements
- workplace procedures and policies for maintaining and using hand tools.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIB1030 Undertake general site maintenance

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to undertake general site housekeeping and maintenance in depots, sub-depots, factories, compounds and campsites according to safeworking and regulatory requirements and workplace procedures.

It includes preparing for work, conducting site housekeeping functions, applying pest and vegetation control measures, and completing all work requirements.

Work is performed under minimal supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Prepare for work

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Works order including drawings, sketches and material lists is received/accessed, analysed and confirmed as required by

site inspection

- 1.2 Resources, including equipment and materials, are identified and obtained
- 1.3 Liaison and communication issues with other personnel at the site are resolved
- 1.4 Hazards are identified prior to commencing work
- 1.5 Site safety requirements are observed
- 2 Conduct site housekeeping functions**
  - 2.1 Stores, materials and equipment are loaded/off-loaded safely and secured
  - 2.2 Site, including stores and materials, is laid out to plan
  - 2.3 Stores and materials are checked for serviceability, cleaned as required and prepared for use
  - 2.4 Minor earthwork maintenance is conducted
  - 2.5 Excess materials and refuse are disposed of/returned, as required by workplace procedures
- 3 Apply pest and vegetation control measures**
  - 3.1 Pest and vegetation control requirements are identified and appropriate control measure is selected in accordance with workplace procedures
  - 3.2 Chemical control agents are prepared in accordance with safety requirements and workplace procedures
  - 3.3 Pest control measures are applied, monitored and varied to maintain effectiveness
  - 3.4 Control measures are applied, and pests and vegetation are removed/neutralised
- 4 Complete work**
  - 4.1 Worksite is rehabilitated
  - 4.2 Work completion details are finalised and recorded/advised to appropriate personnel

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB1030A Undertake general site maintenance.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB1030 Undertake general site maintenance

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when carrying out general site maintenance
- completing documentation related to general site maintenance
- identifying and organising resources required for work activities
- implementing contingency plans and modifying activities depending on operational contingencies, risk situations and environments that may occur when carrying out general site maintenance
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communication equipment to required protocol
- reading, interpreting and following instructions, procedures, information, labels and signs relevant to general site maintenance
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- using hand tools and minor plant
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of plant and equipment, transport, structures, hardware and electrical components used in work activities
- contents of workplace technical manuals and instructions relating to the work activities concerned
- hazardous chemicals used in general site maintenance, and related precautions and personal protection measures
- hazards that may exist during site maintenance activities and ways of controlling the risks involved
- impact on work activities of regulatory requirements
- problems that may occur during site maintenance activities, and action that can be taken to report or resolve these problems
- relevant WHS/OHS and environmental procedures and regulations
- relevant recording and documentation procedures
- relevant sections of applicable regulatory requirements
- workplace documentation and records system management related to the work concerned
- workplace procedures for general site maintenance.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIB1031 Clean up plant, equipment and worksite

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to clean up plant, equipment and worksite in accordance with state/territory Acts and regulations, nationally approved compliance codes and/or guidelines and workplace procedures.

Work is undertaken as part of workplace activities across a variety of operational contexts within the transport and logistics industry.

It includes planning and preparing work, arranging the clear up and disposal/reclamation of material, operating cleaning equipment and mobile plant, finalising the work and restoring the site.

Work is performed under minimal supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Plan and prepare work**
  - 1.1 Details of cleaning requirements are identified by instructions, inspections, work orders and schedules
  - 1.2 Materials and equipment are identified and obtained
  - 1.3 Relevant legislative, statutory and workplace requirements and standards are identified and built into the planning process
  - 1.4 Environmental regulatory requirements are identified and built into the planning process to ensure site is left in an environmentally sound condition
  - 1.5 Required materials to be removed and methods of removal are identified to facilitate clean up
- 2 Arrange clear up and disposal/reclamation of material**
  - 2.1 Storage/disposal areas and quarantine zones are identified and arranged to ensure environmentally sound disposal
  - 2.2 Reclaimed material is removed to storage areas using appropriate methods
  - 2.3 Non-required materials/services are removed and disposed of in appropriate manner to ensure clean and environmentally stable site
  - 2.4 Site is inspected for overlooked materials to minimise wastage and losses
- 3 Operate cleaning equipment and mobile plant**
  - 3.1 Cleaning equipment and mobile plant are operated to site and manufacturer's requirements
  - 3.2 Operator maintenance is performed to manufacturer's/site standards
  - 3.3 Cleaning equipment is cleaned and stored
- 4 Finalise work and restore site**
  - 4.1 Drainage is established/restored as necessary to ensure well drained site
  - 4.2 Re-vegetation/environmental repair is arranged as required to return site to environmentally sound condition
  - 4.3 Barriers are removed or checked for integrity to ensure access to correct areas
  - 4.4 Access roads are closed as required to prevent unauthorised access to closed site

- 4.5 Site level and surface condition are left in a suitable state to ensure an environmentally sound, safe and clean site

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB1031A Clean up plant, equipment and worksite.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB1031 Clean up plant, equipment and worksite

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying cleaning agents, sealants and chemicals
- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when cleaning up plant, equipment and worksites
- completing documentation related to cleaning up plant, equipment and worksites
- handling hazardous materials
- identifying and reclaiming salvageable materials
- identifying and removing water/waste/surplus materials
- implementing contingency plans when cleaning up plant, equipment and worksites
- levelling and re-vegetating sites
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment and sites in accordance with standard operating procedures
- operating and maintaining relevant mobile plant and mobile plant equipment
- operating electronic communication equipment to required protocol
- reading, interpreting and following instructions, procedures, information and signs relevant to cleaning up plant, equipment and worksites
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- using barriers correctly
- using hand and power tools
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable legislated safety requirements including state/territory Acts, regulations and nationally approved compliance codes and/or guidelines
- applications and characteristics of plant and equipment
- cleaning agents/sealants and their properties and precautions for their use
- cleaning equipment, related materials and their applications
- hazards that may exist when cleaning up plant, equipment and worksites and ways of controlling the risks involved
- manufacturer instructions for servicing and cleaning equipment
- permit to work system
- plant and equipment cleaning procedures and instructions
- problems that may occur when cleaning up plant, equipment and worksites, and action that can be taken to report or resolve these problems
- relevant recording and documentation requirements
- workplace procedures for cleaning up plant, equipment and worksites.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIB1093 Clean equipment and restore worksite

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to clean up plant, equipment and worksite in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes planning and preparing work, arranging the clear up and disposal/reclamation of material, operating cleaning equipment and mobile plant, finalising the work and restoring the site.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when cleaning up plant, equipment and worksite, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Plan and prepare work**
  - 1.1 Details of cleaning requirements are identified by referring to instructions, inspections, work orders and schedules
  - 1.2 Hazards are identified, risks are assessed and control measures are implemented
  - 1.3 Cleaning material and equipment are identified and obtained
  - 1.4 Required materials to be removed and methods of removal are identified to facilitate clean up
- 2 Clear up and dispose of or reclaim material**
  - 2.1 Storage/disposal areas and quarantine zones are identified to ensure environmentally sound disposal
  - 2.2 Reclaimed material is removed to storage areas using appropriate methods
  - 2.3 Non-required material/services are removed and disposed of appropriately to ensure clean and environmentally stable site is maintained
  - 2.4 Site is inspected for overlooked material to minimise wastage and losses
- 3 Operate cleaning equipment and mobile plant**
  - 3.1 Cleaning equipment and mobile plant are operated safely to minimise risk of injury to people and equipment damage
  - 3.2 Personal protective equipment required to operate cleaning equipment and mobile plant is identified, obtained and worn as required
  - 3.3 Site/manufacture requirements for operating cleaning equipment and mobile plant are confirmed, clarified as required and followed
  - 3.4 Site/manufacture requirements for maintaining cleaning equipment and mobile plant are confirmed, clarified as required and followed
  - 3.5 Cleaning equipment is cleaned and stored in accordance with site/manufacture requirements
- 4 Finalise work and restore site**
  - 4.1 Barriers are removed or checked for integrity to ensure access to correct areas as required

- 4.2 Site is left in suitable surface condition to ensure an environmentally sound, safe and clean site
- 4.3 Required documentation is completed and processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB1093A Clean equipment and restore worksite.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB1093 Clean equipment and restore worksite

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying cleaning agents, sealants and chemicals in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and workplace procedures
- applying relevant workplace procedures
- completing relevant documentation
- disposing of waste materials in accordance with workplace procedures
- identifying and obtaining correct materials and equipment
- identifying and reclaiming salvageable materials
- identifying and removing water/waste/surplus materials
- interpreting and following operational instructions
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- leaving site in a suitable condition
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment and sites in accordance with operating procedures
- operating and maintaining relevant cleaning equipment in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly, in accordance with workplace procedures
- using quarantine zone and barriers in accordance with environmental and workplace procedures when disposing of material
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- cleaning agents/sealants and their properties and precautions for their use
- cleaning equipment and related materials, and their applications
- hazards that may exist when cleaning up plant, equipment and worksites, and ways of controlling the risks involved
- manufacturer instructions for cleaning equipment
- problems that may occur when cleaning up plant, equipment and worksites, and action that can be taken to report or resolve these problems
- relevant rail danger zones
- relevant recording and documentation requirements
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and codes of practice
- SDSs/MSDSs, manufacturer instructions and organisational procedures
- workplace procedures for cleaning up plant, equipment and worksites.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, SDSs/MSDSs, codes of practice and operation manuals.
-

# TLIB2001 Check and assess operational capabilities of equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to check and assess the operational capabilities of equipment in accordance with regulations, workplace procedures and requirements, within the transport and logistics industry.

It includes inspecting equipment and the work area, checking the operational capability of equipment and its safety devices, identifying and assessing the impact of faults on safety and work requirements, and recording and reporting inspection and testing results.

Safety checks and equipment tests are performed under limited supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Inspect equipment and

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Equipment is inspected prior to start-up in accordance with workplace pre-operational functional safety check

<b>work area</b>	procedures and manufacturer's specifications
	1.2 Aspects of equipment/work area found to be outside manufacturer's and/or workplace specifications are reported to designated persons for appropriate action
<b>2 Check equipment operational capability</b>	2.1 Equipment and components are tested after start-up in accordance with manufacturer's specifications and workplace procedures
	2.2 Warning systems are checked for operational effectiveness
<b>3 Identify and assess impact of faults on work requirements</b>	3.1 Faults are identified and assessment is made of the potential effect on the operation of the equipment for the required work
	3.2 Faults that may affect the safe operation of the equipment are reported to the appropriate personnel for rectification
<b>4 Record and report inspection and testing results</b>	4.1 Inspection and testing results are accurately reported in accordance with regulatory requirements, workplace policies and industry guidelines
	4.2 Clear, unambiguous and concise records are kept, in accordance with workplace policies
	4.3 Clear reference is made to any items that may affect the future safety of the equipment

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIB2001A Check and assess operational capabilities of equipment.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB2001 Check and assess operational capabilities of equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- checking and replenishing fluids and carrying out lubrication processes during work activities
- communicating and working effectively with others when checking and assessing equipment operational capability
- completing documentation related to checking and assessing equipment operational capability
- implementing contingency plans and modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading, interpreting and following instructions, procedures, information, labels and signs relevant to the checking and assessing of the operational capability of equipment
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant equipment and communications technology when checking and assessing equipment operational capability
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- servicing equipment in terms of maintenance schedule and standard operating procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- equipment characteristics, capabilities, limitations and operational safety requirements
- housekeeping procedures
- operational work systems, equipment, management and site operating systems for checking and assessing equipment operational capability
- problems that may occur when checking and assessing equipment operational capability and appropriate action that can be taken to resolve these problems
- site layout and obstacles
- tools and equipment used when checking and assessing equipment operational capability and the precautions and procedures to be followed in their use.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

## **TLIB2034 Maintain poles and associated hardware**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to maintain poles and associated hardware, in accordance with safeworking and regulatory requirements and workplace procedures.

It includes planning for the maintenance of poles and associated hardware, preparing the worksite, conducting the maintenance of poles and associated hardware, and completing all of the work requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when maintaining poles and associated hardware, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

B – Equipment Checking and Maintenance

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan for maintenance of poles and associated hardware**

- 1.1 Works order is received/accessed, analysed and confirmed, as required by site inspection
- 1.2 Resources required for the job are identified and scheduled
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Replacement or additional poles, associated hardware and plant/equipment are transported to the worksite
- 1.5 Liaison and communication issues are acknowledged and resolved

#### **2 Prepare the worksite**

- 2.1 Personnel participating in task, including plant operators and contractors, are fully briefed
- 2.2 Road signs, barriers and warning devices are positioned, and worksite protection is provided
- 2.3 Safeworking rules are observed within the rail corridor
- 2.4 Replacement or additional poles and associated hardware are placed in planned assembly and/or pre-lift location
- 2.5 Excavation/foundation is inspected and confirmed as being in accordance with the works order or specification

#### **3 Conduct maintenance of poles and associated hardware**

- 3.1 Actual maintenance requirement is confirmed by site inspection
- 3.2 Pole and associated hardware to be maintained is stabilised as required
- 3.3 Maintenance of pole and associated hardware is carried out in accordance with the work order and workplace requirements

#### **4 Complete work**

- 4.1 Worksite is rehabilitated, and work is completed in an agreed time and with minimum waste

4.2 System data and pole records are updated in accordance with workplace procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIB2034A Maintain poles and associated hardware.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB2034 Maintain poles and associated hardware

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in tools and equipment in accordance with operating procedures
- applying relevant workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety and safeworking requirements, relevant codes of practice and/or guidelines
- characteristics, capabilities, uses, limitations and location standards for different types of poles

- documentation and records systems related to pole management
- hazards that may exist when maintaining poles and associated hardware and ways of controlling the risks involved
- pole maintenance techniques and processes
- pole treatment chemicals and HAZCHEM requirements in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and organisational procedures
- procedures for support plant and equipment
- relevant rail danger zones
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations including WHS/OHS instructions related to pole erection, site safety and rescue techniques
- responsibilities in relation to other authorities, clients and land-owners
- workplace procedures for maintaining poles and associated hardware
- workplace technical manuals and instructions for maintaining poles and associated hardware.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, SDSs/MSDSs, regulations, codes of practice and operation manuals.
-

## **TLIB2081 Repair timber structures**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to repair timber structures and their components, in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes determining job requirements; preparing and maintaining components, and performing repairs; cleaning up the site after maintenance activities; and completing documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when repairing structures and their components, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

B – Equipment Checking and Maintenance

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Determine job requirements

#### 2 Prepare component for repair

#### 3 Perform repairs

#### 4 Clean up site

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Structures are inspected as required to locate defects

1.2 Hazards are identified, risks are assessed and control measures are implemented

1.3 Job requirements are determined in accordance with workplace procedures, and scope of work and resources required are identified

2.1 Components requiring replacement are checked against standards and are measured for preparation of replacement component

2.2 Materials required for job are identified and organised as required to enable appropriate replacement of components

2.3 Replacement components are cut and shaped to the required standard in accordance with workplace procedures

2.4 Surfaces of components are treated using appropriate methods and materials as required

3.1 Component is replaced to required standard in accordance with workplace procedures

3.2 Connections between timber members are tightened, repaired or replaced using approved material and techniques

3.3 External timber deficiencies in components are treated with suitable materials as required to minimise degradation of components

4.1 Workplace procedures and environmental regulations and standards relevant to site clean-up are confirmed and clarified as required

4.2 Waste is minimised and reused or disposed of in accordance with relevant workplace procedures, and environmental regulations and standards

4.3 Cleaning products and materials are disposed of in accordance with relevant workplace procedures, and environmental regulations and standards

- 4.4 Established site restoration practices are followed and problems with these practices are identified and reported
- 5 Complete documentation**
- 5.1 Required documentation procedures and processes are confirmed
- 5.2 Documentation is filled in legibly and proofread
- 5.3 Documentation is processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB2081A Repair timber structures.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB2081 Repair timber structures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three separate occasions** and include:

- adapting to differences in tools, equipment and work requirements in accordance with operating procedures
- applying relevant workplace procedures
- communicating effectively with others
- following operational instructions and work sequences when undertaking timber structures repair
- identifying defects in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant plans and specifications
- repairing a range of defect types
- repairing existing timber structures using a range of repair techniques
- replacing timber components in accordance with workplace procedures
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant tools and equipment
- working collaboratively with others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- carpentry principles
- functions of different types of timber structures
- hazards that may exist when repairing structures and/or components, and ways of controlling the risks involved
- problems that may occur during the repair of structures and/or components, and action that can be taken to report or resolve the problems
- relevant rail danger zones
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions
- timber structures repair methods and techniques
- types of timber and their characteristics and features
- workplace procedures for the repair of timber structures and/or components.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Practical assessment must occur in an appropriate range of situations, techniques and defect types in the workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulated practical and knowledge assessments
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.
-

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Determine job requirements

#### 2 Prepare component for repair

#### 3 Perform repairs

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Structures are inspected as required to locate defects

1.2 Hazards are identified, risks are assessed and control measures are implemented

1.3 Job requirements are determined in accordance with workplace procedures, and scope of work and resources required are identified

2.1 Components requiring repair are prepared in accordance with requirements

2.2 Materials required for job are identified and organised as required to enable appropriate repair of components

2.3 Surfaces of components are treated using appropriate methods and materials as required

2.4 Components are assembled using appropriate lifting methods to ensure safety

2.5 Connection locations are checked for clearances and tolerances to allow smooth fitting of components

2.6 Fastening of components is performed to specification as required

3.1 Steel members are accurately marked, drilled and cut in accordance with workplace procedures

3.2 Component is replaced or repaired to required standard in accordance with workplace procedures

3.3 Replaced or repaired components are connected to the structure by approved methods in accordance with workplace procedures

3.4 Connections between steel members are tightened, repaired or replaced using approved material and techniques

3.5 External steel deficiencies in components are treated with suitable materials as required to minimise degradation of components

- 4 Clean up site**
- 4.1 Workplace procedures and environmental regulations and standards relevant to site clean-up are confirmed and clarified as required
  - 4.2 Waste is minimised and reused or disposed of in accordance with relevant workplace procedures and environmental regulations and standards
  - 4.3 Cleaning products and materials are disposed of in accordance with relevant workplace procedures and environmental regulations and standards
  - 4.4 Established site restoration practices are followed and problems with these practices are identified and reported
- 5 Complete documentation**
- 5.1 Required documentation procedures and processes are confirmed
  - 5.2 Documentation is filled in legibly and proofread
  - 5.3 Documentation is processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIB2082 Repair steel structures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- adapting to differences in tools and equipment and work requirements in accordance with operating procedures
- applying relevant workplace procedures
- following operational instructions and work sequences when undertaking steel structures repair
- identifying defects in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant plans and specifications
- repairing a range of defect types in accordance with workplace procedures
- repairing existing steel structures using a range of repair techniques
- replacing steel components in accordance with workplace procedures
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant tools and equipment in accordance with workplace procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic steel component assembly techniques
- functions of different types of steel structures
- hazards that may exist when repairing structures and/or components and ways of controlling the risks involved
- information on the use of epoxy and grouts for mortar pads in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and organisational procedures
- problems that may occur during the repair of steel structures and action that can be taken to report or resolve these problems
- relevant rail danger zones
- relevant recording and documentation procedures
- relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- steel structures repair methods and techniques
- workplace procedures for repairing steel structures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Practical assessment must occur in an appropriate range of situations, techniques and defect types in the workplace.

# TLIB2083 Maintain bridge bearings

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to maintain bridge bearings in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes determining job requirements, maintaining bridge bearings, cleaning up the site after maintenance activities, and completing documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when maintaining bridge bearings, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB2084A Carry out routine maintenance of structures.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB2084 Carry out routine maintenance of structures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- applying relevant workplace procedures
- cleaning structures and components routinely in accordance with workplace procedures
- communicating effectively with others
- following operational instructions and work sequences
- identifying defects and remedies
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating communications equipment to required protocol
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- selecting and using required tools and equipment
- tightening a range of fastener types.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hazards that may exist when completing routine maintenance of structures and ways of controlling the risks involved
- problems that may occur during the routine maintenance of structures and action that can be taken to report or resolve these problems

- relevant recording and documentation procedures
- relevant rail danger zones
- relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- routine maintenance methods and techniques
- workplace procedures for maintaining structures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations and fastener types in the workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.
-

# TLIB2085 Apply track fundamentals

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to apply fundamentals of track maintenance and construction, and to carry out basic track measurement, in accordance with approved rail industry standards, safeworking and regulatory requirements, and workplace procedures.

It includes identifying track terminology, track components and track tools and equipment; and undertaking basic track measurement.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the fundamentals of track maintenance and construction, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify track and structures infrastructure

#### 2 Identify track components

#### 3 Identify track tools and equipment

#### 4 Undertake basic track measurement

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Basic track and structures infrastructure terminology is explained

1.2 Track geometry features are explained

2.1 Principal track components are identified and their purpose is explained

2.2 Principal turnout components are identified and their purpose is explained

3.1 Tools and equipment for track installation and maintenance are identified

3.2 Track machines for track installation and maintenance are identified

4.1 Terminology for track measurement is identified and defined

4.2 Measuring equipment is identified and relevant equipment is selected for taking basic track measurements

4.3 Measuring equipment is checked for accuracy

4.4 Measurements are taken accurately and recorded in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIB2085A Apply track fundamentals.

## **Links**

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB2085 Apply track fundamentals

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- completing documentation related to basic track measurement
- identifying job hazards and required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information, technical data, standards and drawings
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting equipment used for basic track measurement
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- authorisation/approval processes and procedures
- fundamentals of track layout and geometry
- fundamentals of track structures
- hazards that may exist when measuring track and ways of controlling the risks involved
- problems that may occur when measuring track and action that can be taken to report or

resolve these problems

- relevant safeworking systems and procedures
- relevant rail danger zones
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- tools and equipment used in track construction and repair
- track components including rails, rail connectors, sleepers, ballast, points, and crossings (and substitute devices, as required)
- workplace procedures for measuring track.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

## **TLIB2086 Apply awareness of structures fundamentals**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to apply awareness of structures fundamentals in accordance with approved rail industry standards, safeworking and regulatory requirements, and workplace procedures.

It includes identifying types of structures, structures terminology and conventions, and defect categories; and locating and identifying defects in structures.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when applying awareness of structures fundamentals, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

B – Equipment Checking and Maintenance

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify types of bridges and structures

#### 2 Identify structures terminology and conventions

#### 3 Identify defect categories

#### 4 Locate structures defects

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Principal bridge types and their purpose are identified

1.2 Other principal structure types and their purpose are identified

2.1 Basic terminology for structures infrastructure is defined

2.2 Principal components of structures and their purpose are identified

2.3 Conventions for numbering structures and their components are explained

3.1 Types of defect are identified

3.2 Conventions for categorising defects are explained

4.1 Hazards are identified, risks are assessed and control measures are implemented

4.2 Tools and equipment for visual inspection of structures are identified and selected

4.3 Previously identified defects in structures are located and identified

4.4 Defects in structures are located and identified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB2086A Apply awareness of structures fundamentals.

## Links

# TLIB2091 Measure and record track geometry

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to measure and record track geometry in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes measuring and recording track geometry, and reporting results.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when measuring and recording track geometry, across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
----------	----------------------

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                           |  |
|---------------------------|--|
| <b>1 Measure geometry</b> | 1.1 Equipment and tools appropriate to task are selected and checked for correct operation in accordance with manufacturer instructions and workplace procedures |
|                           | 1.2 Hazards are identified, risks are assessed and control measures are implemented  |
|                           | 1.3 Equipment is operated in accordance with manufacturer and work instructions to provide appropriate data for analysis   |
| <b>2 Record results</b>   | 2.1 Data is recorded in a complete and accurate manner   |
|                           | 2.2 Documentation is completed in accordance with workplace procedures, as required  |
| <b>3 Process data</b>     | 3.1 Data is compared to maintenance/construction tolerances in accordance with workplace procedures  |
|                           | 3.2 Results are reported in accordance with workplace procedures   |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB2091A Measure and record track geometry.

## Links

## **TLIB2092 Operate minor mechanical equipment**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to operate and maintain minor mechanical equipment in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes carrying out pre-operation checks on equipment, operating mechanical equipment, conducting routine maintenance, and securing and storing equipment.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine procedures when operating and maintaining minor mechanical equipment across a variety of operational contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

B – Equipment Checking and Maintenance

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Carry out pre-operation checks**

1.1 Pre-operational checks are conducted in accordance with manufacturer specifications to ensure optimum functionality of equipment

1.2 Hazards are identified, risks are assessed and control measures are implemented

1.3 Necessary adjustments to equipment are made to ensure efficient operation, in accordance manufacturer instructions

1.4 Faulty equipment is tagged-out and reported to relevant person to ensure equipment is safe and effective to use

#### **2 Operate mechanical equipment**

2.1 Equipment is operated in accordance with manufacturer and workplace operating instructions to ensure safe and effective operation

2.2 Appropriate personal safety protection is used to minimise the risk of injury to operator

2.3 Work operational hazards are identified and eliminated or controlled appropriately when using equipment, to ensure safeworking conditions

2.4 Assisting personnel are given clear instructions about their duties as required to ensure safe and effective working conditions

#### **3 Conduct routine maintenance**

3.1 Equipment is cleaned and maintained in accordance with manufacturer specifications to ensure optimum functionality

3.2 Records are maintained according to workplace procedures

#### **4 Secure and store equipment**

4.1 Equipment is handled and transported in a safe, secure, efficient manner to minimise risk of injury to personnel and damage to equipment

4.2 Equipment is secured in storage area in accordance with operational procedures

4.3 Equipment is stored in accordance with manufacturer and workplace procedures to prevent loss and damage to equipment

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB2092A Operate minor mechanical equipment.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB2092 Operate minor mechanical equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying, selecting and efficiently and effectively using relevant tools and equipment
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring equipment performance
- reading and interpreting relevant manufacturer instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- servicing equipment in terms of maintenance schedule and standard operating procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- problems that can occur when operating and maintaining minor mechanical equipment, and related action that should be taken
- relevant manufacturer operating procedure or manual
- relevant safety, WHS/OHS and environmental procedures and regulations
- tools and equipment used when operating and maintaining minor mechanical equipment, and the procedures and precautions for their care, use and storage
- workplace documentation and records requirements
- workplace procedures and policies for operating and maintaining minor mechanical equipment.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

## **TLIB2096 Repair concrete/masonry structures**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to repair concrete/masonry structures and their components in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes determining job requirements, preparing components, performing repairs and cleaning up the site after maintenance activities.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when repairing concrete/masonry structures and their components, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

B – Equipment Checking and Maintenance

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Determine job requirements**

- 1.1 Structures are inspected as required to locate defects
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Scope of work and resources required are identified
- 1.4 Job is planned in accordance with availability of required resources

#### **2 Prepare components for repair**

- 2.1 Components requiring repair are identified and isolated or marked in accordance with workplace procedures
- 2.2 Materials required for job are identified and organised as required to enable appropriate repair of components

#### **3 Perform repairs**

- 3.1 Defective area is removed in accordance with workplace procedures
- 3.2 Repairs are carried out to required standard in accordance with workplace procedures

#### **4 Clean up site**

- 4.1 Workplace procedures and environmental regulations and standards relevant to site clean-up are confirmed and clarified as required
- 4.2 Waste is minimised and reused or disposed of in accordance with relevant workplace procedures and environmental regulations and standards
- 4.3 Cleaning products and materials are disposed of in accordance with relevant workplace procedures and environmental regulations and standards
- 4.4 Established site restoration practices are followed and problems with these practices are identified and reported

#### **5 Complete documentation**

- 5.1 Required documentation procedures and processes are confirmed
- 5.2 Documentation is filled in legibly and proofread
- 5.3 Documentation is processed in accordance with workplace

procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIB2096A Repair concrete/masonry structures.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB2096 Repair concrete/masonry structures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- applying relevant workplace procedures
- following operational instructions and work sequences
- identifying defects in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant plans and specifications
- repairing a range of defect types
- repairing existing concrete/masonry structures using a range of repair techniques
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant tools and equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic concrete construction techniques
- concrete/masonry structure repair methods and techniques
- functions of different types of concrete/masonry structures
- hazards that may exist when repairing concrete/masonry structures and ways of controlling the risks involved

- problems that may occur during the repair of structures and action that can be taken to report or resolve these problems
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant rail industry standards
- safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and workplace procedure information on the use of epoxy and grouts for mortar pads and cracks
- workplace procedures for repairing concrete/masonry structures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations, repair techniques and defect types in the workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including SDSs/MSDSs, workplace procedures, rail industry standards, regulations, codes of practice and operation manuals.

# TLIB2097 Install and maintain guard rails

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to install and maintain guard rails in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes determining job requirements, installing guard rails and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Guard rails include guard rails installed on:

- level crossings and sharp curves to prevent derailment
- underbridges and near vulnerable structures to limit lateral movement of derailed wagons.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when installing and maintaining guard rails, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Determine job requirements

#### 2 Install guard rail

#### 3 Complete documentation

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Worksite is identified

1.2 Hazards are identified, risks are assessed and control measures are implemented

1.3 Obstructions are cleared from gangways/flangeways to ensure safe passage of trains

1.4 Installation, replacement or repair method is selected in accordance with work requirements, rail industry standards and workplace procedures

1.5 Plant, equipment and materials are prepared for work

2.1 Existing rail is removed, as required, to enable fitting of new rail

2.2 New or replacement guard rail is installed to required standards using suitable equipment and fastening system to restore functionality of guard rail

2.3 Final job is checked for compliance to required standards to enable services to be restored safely

3.1 Required documentation procedures and processes are confirmed

3.2 Documentation is filled in legibly and proofread

3.3 Documentation is processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB2097A Install and maintain guard rails.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB2097 Install and maintain guard rails

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- ensuring completed work meets track geometry requirements
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- installing and maintaining guard rails on underbridges, level crossings in open track in accordance with workplace requirements
- interpreting and following operational instructions
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with rail industry standards, regulatory requirements and workplace procedures
- selecting appropriate material for guard rails
- working systematically with required attention to detail without injury to self or others, or damage to materials or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- guard rail installation and maintenance techniques and processes
- hazards that may exist when carrying out the installation and maintenance of guard rails, and ways of controlling the risks involved
- principles of guard rail function

- problems that may occur when installing and maintaining guard rails, and action that can be taken to report or resolve these problems
- rail industry standards applicable to guard rails
- relevant rail industry standard
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant technical manuals and instructions
- workplace procedures for installing and maintaining guard rails.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.
-

# **TLIB2104 Identify, diagnose and rectify faults on electric passenger trains**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to identify, diagnose and rectify faults on electric passenger trains in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes identifying maintenance and/or repair requirements, conducting minor maintenance and routine repairs, and checking and reporting minor repairs and/or maintenance in accordance with workplace procedures.

Work is generally performed without supervision and within a team environment. It involves the application of routine fault identification, diagnosis and rectification procedures when maintaining the safety and operation of equipment on electric passenger trains operating within Australian rail systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

B – Equipment Checking and Maintenance

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Diagnose faults

1.1 Electric passenger train and equipment are monitored for potential faults

1.2 Hazards are identified, risks are assessed and risk control measures are implemented

1.3 Faulty or damaged components or equipment are identified and assessed

1.4 Equipment and/or tools required to rectify faults are identified and obtained

1.5 Work area and equipment are prepared and made safe to repair faults or to replace components

#### 2 Carry out fault rectification, repair or replacement

2.1 Rectification, repair or component exchange are carried out in accordance with workplace procedures

2.2 Required equipment, tools and materials are operated, applied and handled to conform to work health and safety (WHS)/occupational health and safety (OHS) requirements and manufacturer specifications to prevent injury and damage

2.3 Activities are carried out in accordance with WHS/OHS and workplace procedures

#### 3 Check and report rectification, repair or replacement

3.1 Rectification, repair, or component exchange activities are checked for compliance with safety requirements and workplace procedures

3.2 Equipment is checked to confirm it has been restored to operational standards

3.3 Rectification, repair, component exchange activities are reported and accurately documented in appropriate records or logbooks

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB2104A Identify, diagnose and rectify faults on electric passenger trains.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB2104 Identify, diagnose and rectify faults on electric passenger trains

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- completing relevant documentation
- explaining and following procedures for reporting faults and inoperable equipment
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying typical faults that may occur on electric passenger trains
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring equipment performance
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- rectifying a range of faults correctly on an electric passenger train
- reporting and/or rectifying problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- relevant rail danger zones
- relevant sections of applicable state/territory legislated rail safety requirements, codes of practice and/or guidelines, and safeworking system requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection requirements
- tools and equipment used when identifying, diagnosing and rectifying faults, and the procedures and precautions for their care, use and storage
- typical repair problems that can occur and related action that should be taken
- workplace documentation and records requirements
- workplace procedures and policies for diagnosing and repairing faults.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

# **TLIB2111 Assist with testing train braking system on electric passenger train**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to assist with testing the train braking system on electric passenger trains in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes preparing for train brake inspection and testing, inspecting and testing train brake operation, dealing with identified faults, and reporting and/or recording brake test results in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety and safeworking requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of operational principles, regulations, safeworking codes, protocols and procedures when testing a train braking system, as part of workplace activities across a variety of operational contexts within the Australian rail industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

B – Equipment Checking and Maintenance

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare for train brake inspection and testing**

1.1 Work health and safety (WHS)/occupational health and safety (OHS) legislation, codes of practice, policies and procedures are identified and followed

1.2 Isolation or securing of train is confirmed in accordance with workplace procedures to make the work area safe for the inspection and test

1.3 Hazards are identified, risks are assessed and risk control measures are implemented

1.4 Readiness of brake system for inspection and testing is confirmed

#### **2 Test train brake operation**

2.1 Brake tests are conducted to ensure compliance with required rail industry standards

2.2 Modified brake tests are conducted in accordance with workplace procedures to meet required rail industry standards, as required

2.3 Continuity tests are conducted in accordance with workplace procedures to ensure train braking system meets functional specifications

2.4 Corrective action is taken when faults are identified to ensure operational safety

2.5 Faults or defects found during brake tests are reported and/or recorded in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB2111A Assist with testing train braking system on electric passenger train.

## Links

# Assessment Requirements for TLIB2111 Assist with testing train braking system on electric passenger train

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying rail safety practices, rail industry standards, rules, codes of practice and guidelines
- assessing brake system defects
- completing relevant documentation
- identifying correct procedures to be followed in a failed brake test
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in brakes and related equipment in accordance with operating procedures
- performing all types of applicable brake tests in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- brake systems, their components and their operation
- diagnostic techniques for electric passenger train braking systems
- different types of electric passenger train braking systems failures/defects that could occur
- documentation requirements relating to brake testing
- emergency procedures
- relevant sections of applicable state/territory legislated rail safety requirements, rail industry standards, codes of practice and/or guidelines
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations including codes of practice
- types of brake tests and their purpose.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.
-

## **TLIB2121 Maintain rail joints**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to maintain rail joints in accordance with rail industry standards, safeworking and regulatory requirements, and workplace procedures.

It includes identifying and determining parameters or components that require repair, cutting and boring rail, maintaining rail joints and completing required documentation.

People achieving competence in this unit will need to fulfil applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally in a team environment. It involves the application of routine operational principles and procedures when maintaining rail joints, as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

B – Equipment Checking and Maintenance

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Determine parameters or components that require adjustment**

#### **2 Check and maintain rail joint**

#### **3 Complete documentation**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Rail joint condition, component, fastening and anchoring defects affecting rail joints are identified in accordance with organisational procedures

1.2 Hazards are identified, risks are assessed and control measures are implemented

1.3 Appropriate repair method is selected to ensure rail joint meets specifications

1.4 Scope of work is determined and resources are arranged

2.1 Surfaces and component parts are checked in accordance with specifications and organisational procedures

2.2 Rail joint is maintained to specifications in accordance with organisational procedures

3.1 Required documentation procedures and processes are confirmed

3.2 Documentation is filled in legibly and proofread

3.3 Documentation is processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIB2121B Maintain rail joints.

## **Links**

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB2121 Maintain rail joints

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- examining rail joints to determine defects and selecting appropriate repair methods
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information, technical data, rail industry standards and drawings
- reporting and rectifying identified problems, faults and malfunctions in accordance with workplace procedures
- selecting and using hand tools, power tools and equipment
- using relevant plant and mechanised equipment in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation requirements
- fundamentals of track structures relating to rail joints
- hazards that may exist when maintaining rail joints and ways of controlling the risks involved
- problems that may occur when maintaining rail joints and action that can be taken to report or resolve these problems
- rail joint components

- rail joint defects
- relevant rail industry standards
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- track and rail industry standards relating to rail joints
- workplace procedures for maintaining rail joints.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIB2122 Apply awareness of fundamentals of rail operations in yards or sidings

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to apply an awareness of the fundamentals of rail operations in yards or sidings.

It includes fixed structures, rail vehicles and rolling stock, signals, safety devices, primary activities and safety systems.

This unit is intended as an introduction to rail yards or sidings for people entering the rail industry who will be working on or around rail yards or sidings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Identify yard or siding structures, layout and terminology**
  - 1.1 Terminology for track, trackside equipment and fixed structures is identified
  - 1.2 Features of track, including geography and geometry are identified
  - 1.3 Infrastructure categories and their purpose are identified
  - 1.4 Other principal structure types and their purpose are identified
  - 1.5 Relevant stakeholders for reporting structural faults or anomalies to, are identified
  
- 2 Identify above and below ground services**
  - 2.1 Principal overhead and/or electrical components and their purpose are identified and explained
  - 2.2 Power supply voltages are identified
  - 2.3 Methods of isolation are identified and their purpose is explained
  
- 3 Identify rail track vehicles and rolling stock**
  - 3.1 Types of trains and rolling stock are identified
  - 3.2 Types of rail track vehicles are identified
  - 3.3 Relevant stakeholders for reporting rolling stock faults or anomalies to, are identified
  
- 4 Identify signals and safety devices**
  - 4.1 Types, location and purpose of signals are identified
  - 4.2 Types, location and purpose of safety devices are identified
  - 4.3 Relevant stakeholders for reporting signal or safety device faults or anomalies to, are identified
  
- 5 Identify primary rail activities and safety systems**
  - 5.1 Primary rail activities and other operators are identified as required
  - 5.2 Types and purpose of safety systems are identified
  - 5.3 Relevant stakeholders for reporting safety events to, are identified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB2122A Apply awareness of fundamentals of rail operations in yards or sidings.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB2122 Apply awareness of fundamentals of rail operations in yards or sidings

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- identifying activities carried out in a rail yard or siding
- identifying job hazards and possible safety events and taking required action to minimise, control or eliminate identified hazards
- identifying layout, main features and equipment in a rail yard or siding
- interpreting and following operational instructions.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- above and below ground services
- features of track, layout and geometry
- overhead and/or electrical infrastructure
- primary rail activities and safety management systems
- rail, rail track vehicles and rolling stock
- relevant communications systems and procedures
- relevant rail danger zones
- relevant sections of applicable state/territory legislated rail safety requirements, codes of practice and/or guidelines
- track components and layout
- track, trackside equipment and yard structure terminology.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIB2125 Apply awareness of tram or light rail track fundamentals

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to apply an awareness of tram or light rail fundamentals.

It includes identifying tram or light rail track terminology, track and system components, and the tools and equipment used on or around tram or light rail track.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

# Assessment Requirements for TLIB2125 Apply awareness of tram or light rail track fundamentals

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- identifying job hazards and required action to minimise, control or eliminate identified hazards
- identifying tools and equipment required for a range of tram or light rail track maintenance tasks
- identifying track machines required for a range of tram or light rail track installation and maintenance tasks
- interpreting and following operational instructions
- modifying activities depending on operational contingencies, risk situations and environments.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations related to tram or light rail
- fundamentals of tram or light rail track and structures
- fundamentals of tram or light rail track layout and geometry
- rail electrical system related to tram or light rail infrastructure
- relevant safeworking system and workplace procedures
- tools and equipment used in tram or light rail track construction and repair
- tram or light rail track and overhead trolley components
- tram or light rail track terminology.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIB2130 Diagnose and rectify minor faults on on-track vehicles

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to diagnose and rectify minor faults on on-track vehicles, in accordance with organisational requirements.

It includes identifying repair and maintenance requirements, and conducting repairs and minor maintenance.

It involves the application of routine minor fault diagnosis and rectification procedures to maintain the safety and operation of on-track vehicles. This unit only covers minor repairs as defined by organisational policies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Identify repair and maintenance requirements**
  - 1.1 Faulty or damaged components or equipment are identified and assessed for component exchange or minor repair
  - 1.2 Hazards are identified, risks are assessed and control measures are implemented
  - 1.3 Identified faulty or damaged components outside own scope, as determined by organisational policies, are reported in accordance with organisational procedures
  - 1.4 Where repair/maintenance/component exchange is appropriate, equipment and tools required are identified and obtained
  - 1.5 Work areas and equipment are prepared and made safe for repair/maintenance/component exchange activities
- 2 Conduct minor repairs and maintenance**
  - 2.1 Routine repair/maintenance/component exchange is carried out in accordance with manufacturer specifications and organisational procedures
  - 2.2 Equipment, tools and materials are operated, applied and handled in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements and manufacturer specifications to prevent injury and damage
- 3 Check and report minor repairs and maintenance**
  - 3.1 Minor repair/maintenance/component exchange activities are checked for compliance with manufacturer specifications and workplace procedures
  - 3.2 Equipment is checked to confirm it has been restored to operational standards
  - 3.3 Worksite is checked for cleanliness and operational safety, and appropriate action is taken to restore site and equipment
  - 3.4 Repair/maintenance/component exchange activities are documented and processed in accordance with organisational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB2130A Diagnose and rectify minor faults on on-track vehicles.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB2130 Diagnose and rectify minor faults on on-track vehicles

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in on-track vehicles and associated equipment and procedures
- applying relevant workplace procedures
- carrying out minor repairs, maintenance and component exchange on different on-track vehicles
- changing out faulty components in accordance with organisational procedures and manufacturer specifications
- following correct procedure for identifying minor faults
- following correct workplace requirements for reporting identified defects
- identifying equipment checks required for a range of on-track vehicles in the workplace
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying typical faults or defects that may occur on on-track vehicles
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information and signs
- reporting minor faults and completing organisational documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hazards that may exist when diagnosing and rectifying minor faults with on-track vehicle/s and ways of controlling the risks involved
- organisational procedures for diagnosing and rectifying minor faults with on-track vehicle/s

- problems that may occur when diagnosing and rectifying minor faults with on-track vehicle/s and action that can be taken to report or resolve these problems
- relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- tools and equipment used when diagnosing and rectifying minor faults and the procedures and precautions for their care, use and storage
- workplace documentation and records requirements.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

## TLIB2131 Prepare train

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to prepare a train for operation in accordance with organisational policies and procedures.

It includes conducting pre-departure checks and confirming the required train documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

B – Equipment Checking and Maintenance

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Identify pre-departure checks**
  - 1.1 Required checks, and relevant procedures and standards are identified in accordance with organisational policies and procedures
  - 1.2 Constraints and special instructions that may apply for the journey are obtained
  - 1.3 Compliance with the Australian Dangerous Goods (ADG) Code and relevant regulatory requirements are identified, as required
- 2 Implement pre-departure checks**
  - 2.1 Motive power unit control systems are set up and checked in accordance with organisational policies and procedures
  - 2.2 Hazards are identified, risks are assessed and control measures are implemented
  - 2.3 Train is checked to ensure rolling stock is coupled and sequenced correctly
  - 2.4 Train braking systems are tested to ensure they are operating effectively, in accordance with organisational policies and procedures
  - 2.5 Action is taken to rectify identified faults to ensure minimum delay to planned running schedule
- 3 Confirm train can proceed**
  - 3.1 Relevant personnel are advised of the result of completed checks
  - 3.2 Authority to proceed relevant to the operational situation is obtained and followed in accordance with organisational policies and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB2131A Prepare train.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB2131 Prepare train

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- communicating effectively with others
- completing relevant documentation
- conducting pre-departure checks and confirming the required train documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications procedures and protocols
- emergency procedures
- maintenance and servicing procedures
- relevant sections of the Australian Dangerous Goods (ADG) Code and any other dangerous goods regulations

- relevant state/territory legislated rail safety requirements, codes of practice and/or guidelines
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- train preparation documentation procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIB2133 Test medium/heavy track vehicle braking system

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to test the braking system on medium/heavy track vehicle/s in accordance with manufacturer specifications and/or organisational procedures.

It includes planning and preparing for track vehicle brake inspecting and testing, inspecting and testing track vehicle brake operations, and completing documentation.

This unit applies to people involved in testing a track vehicle braking system as part of workplace activities within the rail industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Plan and prepare for track vehicle brake inspection and testing**
  - 1.1 Logbooks and other relevant documentation are checked to establish existing identified defects
  - 1.2 Hazards are identified, risks are assessed and control measures are implemented
  - 1.3 Track vehicle is isolated or secured, in accordance with workplace procedures, to make the work area safe prior to inspection
- 2 Inspect and test track vehicle brake operation**
  - 2.1 Tools and equipment required to inspect and test brake equipment are identified and obtained
  - 2.2 Visual and acoustic inspections are conducted to identify faults or defects
  - 2.3 Brakes are applied and released to ensure track vehicle braking system meets functional specifications
  - 2.4 Identified defects and faults are rectified and/or reported in accordance with manufacturer specifications and/or organisational procedures
- 3 Complete documentation**
  - 3.1 Required documentation procedures and processes are confirmed
  - 3.2 Logbook and other service records on the track vehicle are completed in accordance with organisational procedures
  - 3.3 Documentation and records are proofread and processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB2133A Test medium/heavy track vehicle braking system.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB2133 Test medium/heavy track vehicle braking system

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in track vehicles and associated equipment and procedures
- completing test result records in accordance with workplace procedures
- conducting inspections and testing of different types of brakes on medium/heavy track vehicle/s
- conducting brake system test on medium/heavy track vehicles in accordance with operational procedures and manufactures specification
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing correct procedure for testing braking system
- implementing workplace procedures to deal with identified defects and faults
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information and signs.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hazards that may exist when starting up and shutting down medium/heavy track vehicles and ways of controlling the risks involved
- organisational procedures for conducting brake tests on medium/heavy track vehicles
- problems that may occur when testing brakes on medium/heavy track vehicles and action that can be taken to report or resolve these problems
- relevant rail industry standards
- relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS)

- and environmental procedures and regulations
- types of brake system tests and their purpose.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

## **TLIB3002 Test equipment and isolate faults**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to test equipment and to isolate faults in accordance with relevant codes of practice, regulations and workplace requirements within the transport and logistics industry.

It includes scoping and planning operational checks, checking equipment through its full operating range, and isolating faults and/or formulating recommendations for adjustment, repair or replacement.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

B – Equipment Checking and Maintenance

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Scope operational checks**
  - 1.1 Physical condition of equipment is observed
  - 1.2 Test procedures and parameters are identified in accordance with workplace procedures and manufacturer specifications
  - 1.3 Preliminary observations are recorded
  - 1.4 Test procedures are confirmed with appropriate staff as required and necessary permission is obtained
- 2 Plan operational checks**
  - 2.1 Specifications and notes from preliminary observations are checked and clarified as required
  - 2.2 Sequence of tests are planned noting where results and observations should be recorded
  - 2.3 Hazards are identified, risks are assessed and control measures are implemented
  - 2.4 Safe area for testing is identified
  - 2.5 Arrangements are made to obtain additional resources and staff, as required
- 3 Check equipment through its full operating range**
  - 3.1 Tests are undertaken in accordance with relevant safety and operational requirements
  - 3.2 Results are recorded and findings are confirmed
- 4 Isolate fault and/or formulate recommendations**
  - 4.1 Proposals for equipment repair are recorded based on faults found, cost/time implications and workplace approval systems
  - 4.2 Report is explained to relevant workplace personnel including options and recommendations
  - 4.3 Parts are procured and/or repairs are undertaken in accordance with enterprise procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3002A Test equipment and isolate faults.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB3002 Test equipment and isolate faults

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant meters, gauges, equipment and tools when testing equipment and isolating faults
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics, capabilities and limitations of equipment concerned
- documentation and record requirements
- fault-finding techniques including identification of cost/time effective rectification procedures
- faults that may occur with equipment, and appropriate action that can be taken to report and/or rectify identified equipment or component faults
- guidelines relating to the safe use of machinery and equipment including tagging unserviceable or damaged items
- housekeeping standards and procedures
- operational safety requirements for equipment concerned
- operational work systems, equipment, management and site operating systems for testing equipment and isolating faults
- relevant sections of regulatory requirements applicable to testing equipment and isolating faults
- site layout and obstacles
- tools, meters, gauges and equipment used when testing equipment and isolating faults and the precautions and procedures that should be followed in their use
- workplace procedures and policies for testing equipment and isolating faults, including tagging and reporting faulty equipment and components.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including manufacturers specifications, workplace procedures, regulations, codes of practice and operation manuals.

## TLIB3018 Conduct full train examination

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to conduct a full train examination in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes preparing for a train examination, preparing a train for examination, examining rolling stock, examining loads, and documenting and actioning examination results.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

B – Equipment Checking and Maintenance

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

#### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Prepare for examination**

- 1.1 Train consist and information on load detail is established for examination purposes
- 1.2 Location for full train examination is confirmed and relevant personnel are notified of examination
- 1.3 Customer defect notices/carded wagon information is established for examination purposes
- 1.4 Materials and equipment required to conduct full train examination are prepared
- 1.5 Hazards are identified, risks are assessed and risk control measures are implemented
- 1.6 Work health and safety (WHS)/occupational health and safety (OHS) requirements applicable to the examination are confirmed
- 1.7 Relevant train documentation is accessed and reviewed to establish key information on rolling stock required for examination, as required

### **2 Prepare train for examination**

- 2.1 Applicable safety device or system is used to ensure train is isolated or secured for examination
- 2.2 Road is locked out using appropriate techniques to ensure safety during examination
- 2.3 Flags, banners, signs and other relevant safety equipment are positioned before and during examination to ensure safety is maintained

### **3 Examine rolling stock**

- 3.1 Types of rolling stock and capacities are confirmed as appropriate for the safe transportation of passengers or freight
- 3.2 Brake systems are checked, all brake tests are conducted and certificates are issued as required
- 3.3 Structure of rolling stock and major components are checked and tested to ensure operational safety
- 3.4 Rolling stock is carded and information is recorded in organisational system
- 3.5 Train irregularities are noted and corrective action is initiated

in accordance with operational requirements

3.6 End-of-train monitor is attached and correct operation is confirmed

3.7 WHS/OHS legislation, codes of practice, policies and procedures are observed during the examination to prevent injury and damage

3.8 Communication is maintained with other personnel involved to ensure safe, efficient and complete examination

#### **4 Examine loads**

4.1 Load security is checked and confirmed that it meets operational safety requirements

4.2 Load contamination is identified and rectified in accordance with WHS/OHS and dangerous goods requirements

4.3 Load dimensions are confirmed appropriate to wagon type and checked against documentation for accuracy

#### **5 Document and action examination results**

5.1 Documentation is completed and forwarded for recording examination results and initiating corrective actions, as required

5.2 Relevant personnel are informed of remedial or appropriate action required prior to resumption of train service

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIB3018A Conduct full train examination.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB3018 Conduct full train examination

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assessing rolling stock defects
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/ occupational health and safety (OHS) standards
- working individually and as part of a team
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications protocols
- emergency procedures
- rail industry standards and specifications for items requiring examination during a full train examination
- relevant rail danger zones
- relevant safety, WHS/OHS, and environmental procedures and regulations
- signals and signalling systems
- train movement documentation procedures
- workplace procedures for conducting a full train examination.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.
-

# TLIB3019 Test train braking system

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to test a train braking system in accordance with workplace procedures, safeworking regulations and codes of practice.

It includes planning and preparing for, and testing train brake operation; dealing with identified faults; and recording brake test results in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment.

Testing train braking system can involve:

- air continuity test
- brake leakage test
- hose and pipe components repair or replacement
- modified brake test
- train brake test.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan and prepare for train brake inspection and testing**

- 1.1 Brake test documentation, rolling stock data and other relevant reports are read and clarified as required to confirm required action
- 1.2 Appropriate tools and equipment are obtained as required and checked prior to inspection
- 1.3 Work health and safety (WHS)/occupational health and safety (OHS) legislation, codes of practice, policies and procedures are identified and followed
- 1.4 Hazards are identified, risks are assessed and risk control measures are implemented
- 1.5 Train is isolated or secured in accordance with workplace procedures to make the work area safe for inspection

#### **2 Inspect and test train brake operation**

- 2.1 Brake leakage test is conducted to ensure compliance with required standards
- 2.2 Modified brake tests are conducted to ensure compliance with required standards
- 2.3 Air continuity test is conducted to ensure train braking system meets functional specifications
- 2.4 Brakes are applied and released to ensure train braking system meets functional specifications
- 2.5 Hoses and pipe components are inspected for defects requiring repair or replacement
- 2.6 Defects and faults are identified and rolling stock is carded

#### **3 Deal with identified faults**

- 3.1 Plans and/or procedures for replacement or repair of identified defective components are implemented in accordance with workplace procedures and manufacturer specifications

- 3.2 Confirmation/verification of minor repairs or replacements is obtained
  - 3.3 Defective rolling stock not fit to run is identified and detachment arrangements are made in compliance with workplace procedures
- 4 Record test results**
- 4.1 Brake test records are completed to reflect inspection results in accordance with workplace policies and procedures
  - 4.2 Records are filed in accordance with workplace policies and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3019B Test train braking system.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB3019 Test train braking system

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying rail safety practices and procedures
- conducting inspections and testing brake operations on relevant types of passenger train, freight train or railcar in accordance with workplace procedures
- communicating effectively with others
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in brakes and related equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- brake systems, their components and their operation
- communications protocols
- defects and faults in train braking systems and relevant workplace procedures to deal with identified defects and faults including isolation and tag out procedures
- diagnostic techniques
- documentation requirements relating to brake testing
- procedures for completing relevant documentation
- relevant workplace procedures
- tools and equipment applications
- types of brake tests and their purpose.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIB3021 Conduct train roll-by inspection

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to conduct a train roll-by inspection in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes preparing to carry out a roll-by inspection of a moving train, inspecting a moving train in accordance with workplace procedures, and reporting and/or actioning inspection results.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment. It involves the application of operational principles, regulations, safeworking codes, protocols and procedures when conducting a roll-by inspection of a moving train, as part of workplace activities across a variety of operational contexts within the Australian rail industry.

Inspecting condition of rolling stock and load may involve:

- air and electrical connections
- bearings
- brake equipment
- dangerous goods condition and separation
- draw gear
- load condition (damage, leaks)
- load securing devices (chains, ropes, pins)
- locking and securing devices
- out-of-gauge conditions
- superstructures
- trailing items (ropes, hoses)
- wheels.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare for train roll-by inspection**

#### **2 Conduct a roll-by inspection of a moving train**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Documentation and other relevant reports are read and clarified as required to confirm inspection requirements

1.2 Individual responsibilities required to complete roll-by inspection are agreed with relevant personnel as required

1.3 Hazards are identified, risks are assessed and risk control measures are implemented

1.4 Position is taken for roll-by inspection at planned time to ensure complete observation without personal risk

1.5 Conditions are assessed and necessary actions are taken to ensure roll-by inspection is effective

2.1 Train identification and status is confirmed

2.2 Train hazards are identified, risks are assessed and risk control measures are implemented

2.3 Condition of rolling stock and load are systematically observed as train passes and specific faults are identified and noted

2.4 Communication is maintained with relevant personnel to ensure safe, efficient and complete roll-by inspection

2.5 Inspection is conducted in accordance with work health and safety (WHS)/occupational health and safety (OHS) workplace

policies and procedures to prevent injury and damage

2.6 Faults requiring urgent action are noted and appropriate action is taken to initiate immediate response to minimise risk from continued movement of train

### **3 Report and action roll-by inspection results**

3.1 Reports of inspections are completed to reflect inspection results

3.2 Appropriate personnel are informed of faults or defects requiring rectification

3.3 Records are circulated and filed in accordance with workplace policies and procedures

### **4 Report on-train roll-by inspection results**

4.1 Outcomes of on-train roll-by inspections are transmitted to appropriate personnel

4.2 Records of on-train roll-by inspections are made in accordance with workplace policies and procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIB3021A Conduct train roll-by inspection.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB3021 Conduct train roll-by inspection

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others
- completing relevant documentation
- documenting results of roll-by inspection including faults or defects requiring rectification, in accordance with workplace operational procedures
- identifying and actioning urgent faults to minimise risk from continued movement of train
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying safe position from which to conduct roll-by inspection
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- interpreting documentation and reports to confirm roll-by inspection requirements
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- observing condition of rolling stock and load of moving train systematically
- positioning self at appropriate location and time to conduct roll-by inspection
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- communications protocols
- contingency management processes for conducting a roll-by inspection of a moving train
- documentation requirements for a roll-by inspection
- procedures for planning and carrying out a roll-by inspection of a moving train
- procedures for completing documentation relevant to a roll-by inspection of a moving train
- relevant rail industry standards, rules, codes of practice, guidelines and specifications for items requiring examination.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, Australian Dangerous Goods (ADG) Code, rail industry standards, regulations, codes of practice and operation manuals.
- 

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# TLIB3026 Prepare for train operation

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to prepare for train operation in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes preparing for and implementing the prescribed pre-departure checks and confirming required train documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment. It involves the application of routine operational principles and procedures when preparing for train operation, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare for pre-departure checks**

- 1.1 Checks and relevant procedures and standards are identified
- 1.2 Purpose of journey and activities to be undertaken are identified
- 1.3 Constraints and special instructions that may apply for journey are identified
- 1.4 Documentation is read and clarified as required to identify and confirm consist, attach/detach vehicle information, loading information and characteristics of the train
- 1.5 Hazards are identified, risks are assessed and risk control measures are implemented
- 1.6 Compliance with relevant regulatory and Australian Dangerous Goods (ADG) Code requirements are identified, as required

#### **2 Implement pre-departure checks**

- 2.1 Motive power control systems are set up and checked in accordance with workplace policies and procedures
- 2.2 Train, or relevant portion of the train, is checked to ensure rolling stock is coupled and sequenced correctly
- 2.3 Train braking systems are applied and released to ensure they are operating effectively
- 2.4 Visual inspection is conducted to identify obvious faults or defects that would prevent safe transit
- 2.5 Corrective action is taken to rectify faults and ensure minimum delay to planned running schedule
- 2.6 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are followed to prevent injury and damage

#### **3 Confirm train can proceed**

- 3.1 Relevant personnel are promptly advised of result of completed checks
- 3.2 Authority to proceed relevant to operational situation is obtained and followed

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3026A Prepare for train operation.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB3026 Prepare for train operation

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying appropriate procedures to overcome identified faults or defects including isolation and tag out procedures
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- setting up and checking train control systems
- testing air continuity and braking systems
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- communications procedures and protocols
- contingency management processes
- procedures for pre-departure train testing
- procedures for preparing a train for operation
- relevant safety, WHS/OHS, and environmental procedures and regulations
- relevant sections of the Australian Dangerous Goods (ADG) Code and other dangerous goods regulations as they apply to freight operations
- relevant workplace procedures
- safeworking systems, procedures and requirements
- set-up procedures for equipment used when controlling trains
- train characteristics and specifications
- train preparation documentation procedures
- typical faults or defects for the type of rolling stock being operated.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations

# TLIB3027 Set up and shut down on-train remote control system

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to set up and shut down an on-train remote control system in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes setting up the remote control system, setting up the lead control system, and shutting down the remote control equipment.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment. It involves the application of routine operational principles and procedures when setting up and shutting down an on-train remote control system, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Set up remote control system

1.1 Remote control system components are set up in accordance with operational plans and manufacturer instructions

1.2 Remote motive power units are placed in required operating mode

1.3 Communications code is entered, and air and electrical systems are activated

1.4 Brake and traction systems are tested using approved personnel to ensure correct operation

#### 2 Set up lead control system

2.1 Cab console is checked, electrical systems are activated and system self-test is confirmed

2.2 Communications code is entered and confirmation is obtained that system has entered link mode

2.3 Full control is obtained and brake tests are conducted using lead control equipment, to ensure correct braking is operational

2.4 Procedures to establish total control are repeated as required

2.5 Train is moved using the full range of tests to ensure operational safety and control

#### 3 Shut down remote control equipment

3.1 Shut-down procedures of lead and remote control equipment are followed to ensure train security and system de-activation

3.2 Equipment indicators or functions are operated to ensure shut-down process is correct and complete

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3027A Set up and shut down on-train remote control system.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB3027 Set up and shut down on-train remote control system

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- conducting post set-up tests to ensure remote control system is operating in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- monitoring performance of equipment
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- setting up remote control system in a range of configurations and/or trains
- shutting down remote control system in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.
- 

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- braking and safety system procedures
- controls, instruments and indicators of an on-train remote control unit and their purpose, location and use

- procedures for controlling motive power units
- procedures for identifying equipment defects in remote control units and assessing identified defective units for appropriate action
- procedures for managing hazardous situations involving on-train remote control systems
- procedures for operating remote control units
- relevant rail danger zones
- relevant safety, work health and safety(WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- relevant workplace procedures
- set-up and shut-down workplace procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIB3040 Inspect poles and associated hardware

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to inspect poles and associated hardware in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes planning and preparing for inspection, conducting inspection of poles and associated hardware, and completing inspection.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when inspecting poles and associated hardware, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan and prepare for inspection**

#### **2 Conduct inspection of poles and associated hardware**

#### **3 Complete the inspection**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Inspection program or works order is received/accessed, analysed and confirmed as required by site inspection

1.2 Resources required for the job are identified and scheduled

1.3 Hazards are identified, risks are assessed and control measures are implemented

1.4 Liaison and communication issues are resolved

1.5 Personnel participating in task, including plant operators and contractors, are fully briefed

2.1 Worksite requirements are confirmed by site inspection

2.2 Road signs, barriers and warning devices are positioned, and worksite protection is provided

2.3 Safeworking rules are observed within the rail corridor

2.4 Pole structures, including foundations and hardware, are inspected by test or examination against approved specifications

3.1 Worksite is rehabilitated, and work is completed in an agreed time with minimum waste

3.2 Inspection reports are completed, pole records are updated and documentation is processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3040A Inspect poles and associated hardware.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB3040 Inspect poles and associated hardware

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- applying relevant workplace procedures
- communicating effectively with others
- communicating plans, intentions and safety criteria to other workers (including plant operators and contractors) prior to work commencing
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant technical instructions and manuals, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- selecting and using appropriate pole testing equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety and safeworking requirements, and relevant codes of practice, rail industry standards and/or guidelines
- characteristics, capabilities, uses, limitations and location standards of different types of poles
- diagnostic and fault finding techniques relevant to inspecting poles and associated hardware
- hazards that may exist when inspecting poles and associated hardware, and ways of controlling the risks involved
- mechanical principles related to structures
- pole maintenance techniques and processes
- problems that may occur when inspecting poles and associated hardware, and action that can be taken to report or resolve these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations, including WHS/OHS instructions related to inspecting poles and associated hardware
- soil types and stabilisation processes
- workplace documentation and records systems related to pole management
- workplace instructions that relate to pole quality and chemical treatment in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions
- workplace procedures for inspecting poles and associated hardware
- workplace requirements for traffic control and guidance signals for planned operations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# **TLIB3046 Service and clean mechanical signalling equipment and infrastructure**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to service and clean mechanical signalling equipment and infrastructure, in accordance with safeworking and regulatory requirements, and workplace standards and procedures.

It includes cleaning and servicing the equipment/infrastructure, and checking/testing the operation and functionality of the equipment/infrastructure after cleaning.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rail industry standards and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when servicing and cleaning mechanical infrastructure signalling equipment, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

B – Equipment Checking and Maintenance

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Clean and service equipment

1.1 Cleaning and servicing equipment, resources and consumables are confirmed ready for use

1.2 Hazards are identified, risks are assessed and control measures are implemented

1.3 All rubbish, weeds and obstructions are removed from equipment and housings

1.4 Initial visual check of operational equipment is performed to identify equipment faults

1.5 External surfaces are inspected and are prepared/painted to organisational standards as required to protect the equipment

1.6 All internal and external surfaces and operational components are cleaned and lubricated to ensure operational effectiveness

1.7 All chemicals, lubricants and consumables are used and disposed of in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs), work health and safety (WHS)/occupational health and safety (OHS) codes and practices, and environmental procedures

#### 2 Check equipment operation

2.1 Approval to conduct a check of equipment operation is obtained in accordance with relevant operational rules and procedures

2.2 Track clearance check is made before conducting equipment operation check to ensure safe train movement

2.3 Authorised equipment operation check is carried out in accordance with operating procedures to identify equipment faults

2.4 Operational effectiveness of equipment is confirmed through observation during train movements as required

2.5 Equipment faults are identified, reported and appropriate corrective action is taken

2.6 Serviced equipment is locked and secured to prevent unauthorised access

### **3 Complete documentation**

- 3.1 Required documentation procedures and processes are confirmed
- 3.2 Documentation is filled in legibly and proofread
- 3.3 Documentation is processed in accordance with workplace procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIB3046A Service and clean mechanical signalling equipment and infrastructure.

## **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB3046 Service and clean mechanical signalling equipment and infrastructure

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- carrying out visual inspection and functional checking tests
- checking operation of equipment in accordance with workplace procedures
- checking/confirming operational requirements
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information, diagrams and signs
- reporting identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- using chemical cleaning agents, solvents and lubricants in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements and relevant rail industry standards, codes of practice and/or guidelines
- documentation and record keeping requirements
- fault detection techniques
- fundamentals of signalling and operations of mechanical signalling equipment
- hazards that may exist when servicing and cleaning mechanical signalling equipment and infrastructure, and ways of controlling the risks involved
- problems that may occur when servicing and cleaning mechanical signalling equipment and infrastructure, and action that can be taken to report or resolve these problems
- rail/train movement systems
- recording procedures
- relevant WHS/OHS and environmental procedures and regulations
- workplace safeworking authorisation/approval processes and procedures
- workplace standards and procedures for servicing and cleaning mechanical signalling equipment and infrastructure.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation including workplace procedures, rail industry standards, SDSs/MSDSs, codes of practice and operation manuals.
-

# TLIB3047 Repair and adjust mechanical signalling equipment and infrastructure

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to repair and adjust mechanical signalling equipment and infrastructure (excluding interlocking equipment), in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes diagnosing equipment faults, correcting equipment faults, and testing and adjusting the equipment after repair.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when repairing and adjusting mechanical signalling equipment and infrastructure (excluding interlocking equipment), as part of workplace activities across a variety of operational contexts within the Australian rail system.

Cleaning and lubrication includes:

- all cleaning operations by hand
- chemical or steam cleaning
- applying lubricating oils and greases.

Operational compliance includes the manufacturer and/or safeworking operational specifications for functional movements, operations and outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
<b>1 Diagnose equipment faults</b>	<p>1.1 Out-of-specification or non-operating equipment/components are correctly identified through operational testing</p> <p>1.2 Viability of adjustments/replacements/repairs to equipment/components is correctly evaluated to ensure cost effective operations</p> <p>1.3 Hazards are identified, risks are assessed and control measures are implemented</p> <p>1.4 Work is planned to ensure minimum disruption to train operations and safe repair activities</p> <p>1.5 Support/assistance with diagnosis or repair operation is obtained through liaison with appropriate personnel</p> <p>1.6 Work health and safety (WHS)/occupational health and safety (OHS) and environmental requirements for a given task area are obtained and clarified as required, in consultation with appropriate personnel</p>
<b>2 Correct equipment faults</b>	<p>2.1 Liaison with or support to other personnel is maintained to ensure equipment is maintained within specification</p> <p>2.2 Equipment and components are replaced or repaired in accordance with operational specifications to ensure required level of operations</p> <p>2.3 Equipment and component adjustment is performed to specifications to ensure required level of operations</p> <p>2.4 Viability of repairs to replaced equipment/components is evaluated and equipment is tagged for repair or disposed of in accordance with</p>

organisational requirements

- 3 Test and adjust equipment**
- 3.1 Final cleaning, lubricating and adjustments to equipment is carried out to ensure operational compliance
  - 3.2 Equipment functions are tested to ensure operational compliance with required standards
  - 3.3 Equipment is locked/secured as specified to ensure safety and protection from elements or people
  - 3.4 Records of repair activities are correctly completed and forwarded to appropriate personnel for use in identifying future maintenance requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3047A Repair and adjust mechanical signalling equipment and infrastructure.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB3047 Repair and adjust mechanical signalling equipment and infrastructure

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- applying relevant test procedures
- applying relevant workplace procedures
- checking compliance with operational specification
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating mechanical signalling equipment
- reading and interpreting relevant instructions, procedures, information, diagrams and signs
- repairing and replacing equipment
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- testing and adjusting equipment function after repair has been completed to ensure compliance with manufacturer and operational requirements
- using chemical cleaning agents, solvents and lubricants in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and organisational procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation/authorisation processes and procedures, and technical specifications manuals
- fault detection techniques
- fundamentals of signalling and operations of mechanical signalling equipment
- hazards that may exist when repairing and adjusting mechanical signalling equipment and infrastructure, and ways of controlling the risks involved
- mechanical fitting techniques
- problems that may occur when repairing or adjusting mechanical signalling equipment and infrastructure, and action that can be taken to report or resolve these problems
- recording procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- SDSs/MSDSs for cleaning and lubricating equipment
- workplace procedures and rail industry standards for repairing and adjusting mechanical signalling equipment and infrastructure (excluding interlocking equipment).

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, rail industry standards, codes of practice and operation manuals.

# **TLIB3048 Carry out off-site repair, overhaul and assembly of mechanical signalling equipment**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to carry out off-site repair, overhaul and assembly of mechanical signalling equipment in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes assessing equipment condition, replacing out-of-specification components, producing components as required, assembling components, and testing and adjusting equipment to ensure overall system integrity.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the off-site repair, overhaul and assembly of mechanical signalling equipment, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

B – Equipment Checking and Maintenance

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Assess equipment condition

- 1.1 Equipment condition is established through tagged repair sheets from the field and initial examination
- 1.2 Condition of all out-of-tolerance equipment and components is correctly identified and recorded through detailed inspection and testing
- 1.3 Type and extent of required repairs are evaluated to determine viability of repair operations and to estimate time requirements
- 1.4 Components requiring disposal are identified and replacement components are arranged to allow work to commence

#### 2 Replace components

- 2.1 Equipment is dismantled to the extent required to carry out previously identified repairs
- 2.2 Components requiring replacement are stored for later repair/disposed of in line with organisational requirements
- 2.3 Components are replaced/repaired/returned to operational condition in line with technical specifications and standard workshop practices

#### 3 Produce components

- 3.1 Components are produced to comply with the defined job requirements and technical specifications
- 3.2 Appropriate manufacturing/workshop techniques are applied to ensure required quality components are produced

#### 4 Assemble components

- 4.1 Assembly methods and sequencing are planned to ensure efficient operations
- 4.2 Components are laid out for assembly in accordance with planned processes
- 4.3 Assembly of all components, sub-assemblies and equipment is correctly carried out in accordance with planned operations, and job and technical specifications
- 4.4 Securing methods and operations are carried out in accordance with job and technical specifications

#### 5 Test and adjust

- 5.1 Equipment functions are tested to ensure conformance to

## **equipment**

drawings and specifications

- 5.2 Assembly and joining/securing processes and outcomes are checked and tested as required to match the job and technical specifications
- 5.3 Adjustments are made to ensure all equipment operations meet the technical specifications
- 5.4 Operational/functional compliance to the job and technical specifications is confirmed and certified
- 5.5 Required documentation is correctly completed and forwarded to appropriate personnel to confirm the equipment is certified for use

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIB3048A Carry out off-site repair, overhaul and assembly of mechanical signalling equipment.

## **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB3048 Carry out off-site repair, overhaul and assembly of mechanical signalling equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- carrying out appropriate repairs in accordance with workplace requirements
- carrying out visual inspection and checking in accordance with workplace procedures
- checking/confirming compliance with operational specifications
- identifying faults in accordance with organisational procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- using chemical cleaning agents, solvents and lubricants in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and organisational procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation and record keeping requirements
- chemical cleaning agents, solvents and lubricants, SDSs/MSDSs and manufacturer instructions
- fault detection techniques
- fundamentals of signalling and operations of mechanical signalling equipment
- hazards that may exist when off-site repairing, overhauling and assembling mechanical signalling equipment, and ways of controlling the risks involved
- problems that may occur when off-site repairing, overhauling and assembling mechanical signalling equipment, and action that can be taken to report or resolve these problems
- relevant mechanical signalling equipment components and technical specifications
- relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace procedures for off-site repairing, overhauling and assembling mechanical signalling equipment.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# **TLIB3053 Maintain mechanical signalling locking and interlocking devices**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to maintain mechanical signalling locking and interlocking devices in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes diagnosing and correcting faults in the devices, and testing and adjusting the repaired equipment to meet workplace and manufacturer standards.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when maintaining mechanical signalling locking and interlocking devices, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

B – Equipment Checking and Maintenance

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Diagnose locking/interlocking equipment faults**

#### **2 Correct equipment faults**

#### **3 Test and adjust locking/interlocking equipment**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Out-of-specification or non-operating mechanical locking and interlocking signalling equipment /components are correctly identified through operational testing
  - 1.2 Viability of adjustments/replacements/repairs to equipment/components is correctly evaluated to ensure cost effective operations
  - 1.3 Work is planned to ensure minimum disruption to train operations and safe repair activities
  - 1.4 Support/assistance with diagnosis or repair operations is obtained through liaison with appropriate personnel
- 2.1 Mechanical locking and interlocking signalling equipment and component cleaning/lubrication and adjustment is performed to specifications to ensure required level of operations
  - 2.2 Equipment and components are replaced or repaired in accordance with operational specifications to ensure required level of operations
  - 2.3 Viability of repairs to replaced equipment/components is evaluated and equipment is tagged for repair or disposed of in accordance with workplace requirements
  - 2.4 Liaison with or support to other personnel is maintained to ensure equipment is maintained within specification
- 3.1 Locking/interlocking equipment functions are tested to ensure operational compliance with required standards
  - 3.2 Final cleaning, lubricating and adjustments to equipment are carried out to ensure operational compliance
  - 3.3 Equipment is locked/secured as specified to ensure safety and protection from elements or people
  - 3.4 Records of repair activities are correctly completed and forwarded to appropriate personnel for use in identifying future maintenance requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3053A Maintain mechanical signalling locking and interlocking devices.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB3053 Maintain mechanical signalling locking and interlocking devices

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- applying relevant test procedures
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- operating mechanical signalling equipment
- reading and interpreting relevant instructions, procedures, information and signs
- repairing and replacing mechanical locking and interlocking equipment
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using hand, portable, power and air tools
- using chemicals, solvents and lubricants in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and organisational procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- contents of technical specifications and manuals
- documentation/authorisation processes and procedures
- fault detection techniques
- hazards that may exist when repairing and adjusting mechanical locking and interlocking signalling equipment, and ways of controlling the risks involved
- mechanical fitting techniques
- organisational procedures
- principles of railway signalling, particularly those dealing with mechanical locking and interlocking equipment
- problems that may occur when repairing and adjusting mechanical locking and interlocking signalling equipment, and action that can be taken to report or resolve these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- SDSs/MSDSs, manufacturer instructions and workplace procedures for repairing and adjusting mechanical locking and interlocking signalling equipment.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

- applicable documentation including workplace procedures, rail industry standards, SDSs/MSDSs, regulations, codes of practice and operation manuals.

# TLIB3058 Maintain aerial signal/telecommunications lines and cables

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to maintain aerial signal/telecommunications lines and cables in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes inspecting and servicing line and cable routes, diagnosing identified line and cable faults, and repairing line and cable faults to the standards specified to ensure system integrity.

Work is performed under minimal supervision, generally within a team environment.

It involves the application of routine operational principles and procedures when maintaining aerial signal/telecommunications lines and cables, as part of workplace activities across a variety of operational contexts within the Australian rail system.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Inspect and service line and cable routes

- 1.1 Routes are inspected and recorded, and arrangements are made for the removal of any obstructions, damage or infringing vegetation to provide free access to cables/aerials
- 1.2 Hazards are identified, risks are assessed and risk control measures are implemented
- 1.3 Routes are physically inspected to determine breaks, misalignments, damage and insulation wear requiring repair
- 1.4 Poles are inspected for deterioration and a safety assessment is made

#### 2 Diagnose line and cable faults

- 2.1 Permission to test isolated equipment is confirmed prior to work being undertaken
- 2.2 Probable location of fault is identified from visual inspection and circuit tests are conducted to isolate fault area
- 2.3 Nature of fault is identified from further tests and corrective action required is identified to enable appropriate arrangements for resources and for work to be performed
- 2.4 Disconnection/insulation procedures are applied to enable maintenance work to be performed in isolation to systems where lines are in close proximity to high voltage services

#### 3 Repair line and cable faults

- 3.1 Worksite is made safe in accordance with organisational safety requirements to enable repair work to be safely undertaken
- 3.2 Aerial lines/cables are repaired to operational and technical requirements using appropriate jointing or replacement/repair procedures
- 3.3 Repaired/replaced line/cable is tested to specified standards to ensure conformity to operational and technical requirements

- 3.4 Appropriate personnel are notified of completed repairs/replacement and appropriate documentation is completed and processed in accordance with organisational requirements and returned to appropriate organisation/department as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3058A Maintain aerial signal/telecommunications lines and cables.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB3058 Maintain aerial signal/telecommunications lines and cables

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant rail industry standards, codes of practice, guidelines and workplace procedures
- carrying out line/cable/conductor jointing and termination
- communicating effectively with others when maintaining aerial signal/telecommunications lines and cables
- diagnosing and repairing aerial cable faults
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- inspecting aerial signal/telecommunications line routes and poles
- installing aerial signal/telecommunications lines and cables to rail industry standards, rules, codes of practice and guidelines
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information, technical data and drawings
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- selecting and using hand tools, power tools and equipment
- using relevant test equipment and aerial cable testing techniques
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable legislated rail safety and rail industry standards requirements
- clearance and separation procedures from other services for aerial signal/telecommunications lines and cables
- common aerial cable system faults
- documentation and record keeping requirements
- electrical theory and principles relevant to aerial cables
- fault diagnosis/problem solving
- hazards that may exist when maintaining aerial signal/telecommunications lines and cables, and ways of controlling the risks involved
- line/cable technical specifications
- problems that may occur when maintaining aerial signal/telecommunications lines and cables, and action that can be taken to report or resolve these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- separation and installation rail industry standards requirements for aerial signal/telecommunications lines and cables
- static clearance (electrical) as defined by rail industry standards and organisational procedures
- technical requirements for installing and maintaining aerial signal/telecommunications lines and cables
- techniques for operating support equipment
- test equipment and procedures
- workplace procedures for maintaining aerial signal/telecommunications lines and cables.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIB3075 Inspect and prepare a motive power unit

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to inspect, prepare and start a motive power unit in accordance with relevant workplace procedures, rail safety regulations and codes of practice.

It includes checking and preparing a motive power unit, visually examining a motive power unit, conducting in-cab checks, and starting and positioning a motive power unit for service in accordance with workplace requirements.

A motive power unit is a rail vehicle used to provide the power to move itself or other vehicles.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare for work activities**

- 1.1 Roster is checked and interpreted for day's train driving activities
- 1.2 Allocation of motive power units is checked as required by notices, in conjunction with network control officer and roster clerk
- 1.3 Hazards are identified, risks are assessed and risk control measures are implemented
- 1.4 Trackside safety and basic electrification awareness procedures are followed as required, while locating allocated motive power unit in the yard
- 1.5 Motive power unit inspection and preparation duties are identified and interpreted
- 1.6 Train schedules, notices and other operational and regulatory documentation are accessed and interpreted in accordance with workplace procedures
- 1.7 Communication equipment required for day's operations is obtained and checked to ensure it is functional
- 1.8 Required personal protective equipment is obtained for use prior to day's train driving activities
- 1.9 Motive power unit to be inspected and prepared is located in the yard

#### **2 Inspect and prepare motive power unit**

- 2.1 Features, functions and location of motive power unit and associated equipment are identified
- 2.2 Logbook is checked to confirm serviceability of unit
- 2.3 Preparation and safety checks are conducted, in accordance with work health and safety (WHS)/occupational health and safety (OHS) and other workplace policies and procedures
- 2.4 Motive power unit, kit and equipment are checked and defects and deficiencies are recorded and rectified, isolated, tagged or reported as required, in accordance with workplace procedures and regulatory requirements

- 2.5 Availability of appropriate fuel, lubricating oils, water, coolant and sand quantities are checked against journey requirements as required and appropriate action is taken to replenish them
  - 2.6 Relevant WHS/OHS and regulatory requirements are followed
- 3 Start motive power unit**
- 3.1 Motive power unit is started in accordance with manufacturer instructions and/or workplace procedures and operating faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up
  - 3.2 Where critical or serious equipment faults cannot be readily rectified, motive power unit is shut down, faulty equipment is isolated and tagged, and problem is reported
  - 3.3 Instruments and gauges are observed and readings are interpreted to confirm effective operation
  - 3.4 Action is taken to determine cause of identified problem in instruments and gauges, and situation is rectified or reported, as required
  - 3.5 Fluid levels are rechecked after starting and appropriate action is taken as required
  - 3.6 Pre-departure checks are carried out to ensure motive power unit is braking and powering effectively and is safe to move
- 4 Conduct in-cab checks**
- 4.1 Motive power unit is checked in correct sequence and all equipment is confirmed to be operating to optimum requirements
  - 4.2 Cab layout is checked and confirmed that it meets operating requirements
  - 4.3 Pre-departure mechanical checks are correctly performed and correct functioning of equipment is confirmed in accordance with workplace procedures and manufacturer operating requirements
  - 4.4 Supervisory controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly
  - 4.5 Communications equipment is checked to ensure it is functioning correctly and appropriate action is taken if it is not working correctly
  - 4.6 Seat, windows, blinds, air conditioners, heaters and other

personal in-cab equipment are checked and adjusted for correct functionality, safety and comfort

4.7 Auxiliary equipment is checked and is confirmed to be operational in accordance with operating requirements

4.8 Fire extinguisher and emergency toolbox are checked to confirm they are in position and meet operational requirements

## **5 Complete documentation**

5.1 Required documentation concerning inspecting motive power unit is completed and processed in accordance with workplace procedures and regulatory requirements

5.2 Logbook and other service records on the motive power unit are completed and filed in accordance with workplace procedures and regulatory requirements

## **6 Position motive power unit**

6.1 Authority to move and position motive power unit is obtained and relevant personnel are advised of intention and procedures

6.2 Motive power unit is operated in accordance with standard procedures and regulatory requirements, within operating and operational constraints

6.3 Motive power unit is positioned in accordance with operational requirements and directions

6.4 Motive power unit performance is monitored during operation to confirm effective operation or to identify defects

6.5 Equipment defects are identified, reported, rectified and recorded or relevant personnel are advised for assistance

6.6 Relevant WHS/OHS and regulatory requirements are followed to ensure safety and to prevent injury and damage

6.7 Network control officer and other relevant personnel are advised that motive power unit is secured in the required position and is ready for service

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3075A Inspect and prepare a motive power unit.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB3075 Inspect and prepare a motive power unit

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in motive power units and associated equipment and procedures
- checking and replenishing fluids and carrying out lubrication requirements on a motive power unit
- communicating effectively with others
- conducting a visual inspection of a motive power unit and associated equipment
- identifying and assessing motive power unit defects and deficiencies and taking appropriate action to report, isolate, repair or replace identified defective equipment in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- operating electronic communications equipment to required protocol
- preparing a motive power unit prior to service
- reading and interpreting relevant instructions, procedures and information and signs
- working collaboratively with others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- braking and safety system procedures for motive power units
- cleaning requirements for a motive power unit
- communications equipment checks
- emergency procedures
- external features of a motive power unit that must be checked during a pre-operational visual inspection
- fuel tank capacity and range (where applicable)
- functions of all supervisory indicators and controls and related checks for correct operation
- functions of auxiliary systems on a motive power unit and related checks for correct operation
- in-cab pre-operational checks for a motive power unit
- inspection procedures for a motive power unit
- lubrication requirements for a motive power unit
- operating controls to start, accelerate, decelerate and stop a motive power unit
- operating procedures for a motive power unit
- principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
- procedures for adjusting controls to optimise the operation of a motive power unit
- procedures for checking fuel and fluid levels and carrying out lubrication processes on a motive power unit
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing and controlling hazardous situations when preparing and starting up a motive power unit
- procedures for minor maintenance including cleaning, brake shoe/pad replacement and sand box requirements
- procedures for operating electronic communications equipment in accordance with required protocol
- procedures for starting and operating auxiliary systems on a motive power unit
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- requirements for completing relevant documentation
- start-up procedures for motive power units
- typical defects that can occur on a motive power unit and related action that should be taken
- workplace procedures and operating requirements.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations*, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations*, current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIB3078 Inspect, prepare and start an electrical tram

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to inspect, prepare and start an electric tram in accordance with relevant regulations and workplace practices.

It includes checking and preparing an electric tram, visually examining an electric tram, conducting on-tram checks, and starting and positioning an electric tram for service in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines, as well as relevant road rules and tramway regulatory requirements.

Work is performed under minimal supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

<b>ELEMENTS</b>	<b>PERFORMANCE CRITERIA</b>
-----------------	-----------------------------

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
<b>1 Plan and prepare electric tram</b>	<ul style="list-style-type: none"><li>1.1 Roster is checked and interpreted for day's tram driving activities</li><li>1.2 Allocation of electric trams is checked in conjunction with tram controllers and roster clerk</li><li>1.3 Electric tram inspection and preparation duties are identified and interpreted</li><li>1.4 Tram schedules, notices and other operational and regulatory documentation are accessed and interpreted in accordance with workplace procedures</li><li>1.5 Communications equipment required for the day's operations is obtained and checked to ensure it is functional</li><li>1.6 Hazards are identified, risks are assessed and risk control measures are implemented</li><li>1.7 Required personal protective equipment is obtained for use prior to tram driving activities</li><li>1.8 Electric tram to be inspected and prepared is located in the depot</li><li>1.9 Depot safety and basic electrical equipment awareness procedures are followed while locating tram in the depot</li></ul>
<b>2 Visually inspect and prepare electric tram</b>	<ul style="list-style-type: none"><li>2.1 Features, functions and location of electric tram and associated equipment are identified</li><li>2.2 Logbook is checked to confirm serviceability of unit</li><li>2.3 Pre-start internal and external safety and maintenance checks are conducted, in accordance with work health and safety (WHS)/occupational health and safety (OHS) and other workplace policies and procedures</li><li>2.4 Electric tram and equipment are checked visually, and defects and deficiencies are recorded and rectified, isolated, tagged or reported as required, in accordance with workplace procedures and regulatory requirements</li><li>2.5 Availability of traction power and sand are checked against journey requirements as required, in accordance with workplace procedures and regulatory requirements</li></ul>

- 2.6 Relevant WHS/OHS and regulatory requirements are followed
  - 2.7 Documentation for electric tram inspection and preparation results is completed in accordance with workplace procedures
- 3 Conduct on-tram checks**
- 3.1 Electric tram is checked in correct sequence and all lights are confirmed as operating to optimum requirements
  - 3.2 Pre-departure mechanical checks are correctly performed and correct functioning of all equipment is confirmed in accordance with workplace procedures and manufacturer operating requirements
  - 3.3 Supervisory controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly
  - 3.4 Communications equipment is checked to ensure it is functioning correctly and appropriate action is taken if it is not working correctly
  - 3.5 Seat, windows, blinds and other personal in-cab equipment are checked and adjusted for correct functionality, safety and comfort
  - 3.6 Ancillary equipment is checked and is confirmed to be operational in accordance with operating requirements
  - 3.7 Fire extinguisher, point bars and any other required tools are checked to confirm they are in position
- 4 Start electric tram**
- 4.1 Electric tram is started in accordance with instructions and any operating faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up
  - 4.2 Where critical or serious equipment faults cannot be readily rectified, electric tram is shut down and reported for rectification in accordance with procedures
  - 4.3 Instruments and gauges are observed and readings are interpreted to confirm effective operation
  - 4.4 Action is taken to determine cause of identified problem in instruments and gauges, and situation is rectified or reported, as required
  - 4.5 Sand operation is checked after starting and appropriate action is taken as required if not effectively functioning
  - 4.6 Pre-departure checks are carried out to ensure electric tram is

braking and powering effectively and is safe to move

- 5 Position electric tram**
- 5.1 Authority to move and position electric tram is obtained and relevant personnel are advised of intention and procedures
  - 5.2 Electric tram is positioned in accordance with operational requirements and directions
  - 5.3 Tram performance is monitored during operation to confirm effective operation or to identify defects
  - 5.4 Equipment defects are identified, rectified and recorded or relevant personnel are advised for assistance
  - 5.5 Relevant WHS/OHS and regulatory requirements are followed to ensure safety and to prevent injury and damage
  - 5.6 Relevant personnel are advised electric tram is secured in required position and is ready for service
  - 5.7 Required documentation concerning inspecting, preparing and starting up electric tram is completed and processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3078A Inspect, prepare and start an electric tram.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB3078 Inspect, prepare and start an electrical tram

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in trams and associated equipment and procedures
- checking and replenishing sand on an electric tram as required
- checking electric tram equipment in accordance with workplace procedures
- conducting pre-operational and in-cab checks in accordance with workplace operational procedures
- conducting a visual inspection of an electric tram and associated equipment in accordance with workplace procedures
- identifying and assessing tram defects and deficiencies and taking appropriate action to report, isolate, repair or replace identified defective equipment in accordance with workplace procedures
- identifying job hazards and required action to minimise, control or eliminate identified hazards
- interpreting and following instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- operating and checking electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures and information and signs
- selecting and using required personal protective equipment conforming to work health and safety (WHS)/occupational health and safety (OHS) and industry standards.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- braking and safety system procedures for an electric tram
- cleaning requirements for an electric tram
- communication equipment checks
- electric tram controls, instruments and indicators and their purpose, location and use
- emergency procedures
- external features of an electric tram that must be checked during a pre-operational visual inspection
- functions of all supervisory indicators and controls and related checks for correct operation
- functions of ancillary systems on an electric tram and related checks for correct operation
- functions of sand as used on an electric tram and the procedures for checking and refilling sand levels and carrying out sand system testing processes on an electric tram
- monitoring devices, braking and power equipment, safety systems, ancillary systems and any signalling systems
- on-tram pre-operational checks for an electric tram
- operating controls to start, accelerate, decelerate and stop an electric tram
- principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
- procedures for adjusting controls to optimise the operation of an electric tram
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing and controlling hazardous situations when preparing and starting up an electric tram
- procedures for minor maintenance including cleaning
- procedures for operating electronic communications equipment in accordance with required protocol
- procedures for raising and lowering a pantograph or trolley pole on an electric tram
- procedures for starting and operating ancillary systems on an electric tram
- relevant safety, WHS/OHS, and environmental procedures and regulations
- relevant state/territory road traffic authority and tramway operating procedures
- requirements for completing relevant documentation when inspecting, preparing and starting an electric tram
- start-up procedures for an electric tram
- typical defects that can occur on an electric tram and related action that should be taken
- visual inspection procedures for an electric tram.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate tram workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## **TLIB3087 Examine timber structures**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to examine timber structures in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes obtaining all relevant previous reports, performing a detailed examination, initiating appropriate actions and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when conducting a detailed timber structures examination, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

B – Equipment Checking and Maintenance

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Obtain previous reports**

1.1 Operational history of structure from available sources is reviewed

1.2 Previous defects identified in reports are noted to enable rechecking of problem areas

1.3 Relevant personnel are contacted to identify reported complaints or indications of wear or damage

#### **2 Perform detailed examination**

2.1 Hazards are identified, risks are assessed and risk control measures are implemented

2.2 Timber structures and components are visually inspected and checked for signs of movement, deterioration and damage in accordance with workplace procedures

2.3 Connections between timber components are visually inspected and checked for signs of wear, looseness, corrosion, deterioration and damage in accordance with workplace procedures

2.4 Relevant inspection aids are used to perform detailed inspection to identify defects in accordance with workplace procedures

#### **3 Take appropriate actions**

3.1 Major defects affecting safe passage are acted on as soon as possible in accordance with workplace procedures

3.2 Defects and deficiencies are reported to enable repairs to be effected in a timely manner

#### **4 Complete documentation**

4.1 Examination schedule or work report data is completed in accordance with workplace procedures

4.2 Documentation is filled in legibly and proofread

4.3 Documentation is processed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3087A Examine timber structures.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB3087 Examine timber structures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- communicating effectively with others when conducting a detailed timber structures examination
- examining a range of timber structure types
- following operational instructions and work sequences when examining timber structures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying, selecting and using measuring instruments and equipment
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- planning and organising remedial work
- reading and interpreting relevant plans and specifications
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- taking appropriate action for identified defects.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hazards that may exist when conducting a detailed timber structures examination and ways of controlling the risks involved
- problems that may occur when conducting a detailed timber structures examination and action that can be taken to report or resolve these problems
- relevant rail danger zones
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions
- timber structures examination methods and fault detection techniques
- workplace procedures for conducting a detailed timber structures examination.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

## **TLIB3088 Examine steel structures**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to examine steel structures in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes obtaining all relevant previous reports, performing a detailed examination, initiating appropriate necessary actions and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment.

It involves the application of routine operational principles and procedures when conducting a detailed steel structures examination, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

B – Equipment Checking and Maintenance

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Obtain previous reports**

- 1.1 Operational history of structure from available sources is reviewed
- 1.2 Previous defects identified in reports are noted to enable rechecking of problem areas
- 1.3 Relevant personnel are contacted to identify reported complaints or indications of wear or damage

#### **2 Perform detailed examination**

- 2.1 Hazards are identified, risks are assessed and risk control measures are implemented
- 2.2 Steel structures and components are visually inspected and checked for signs of buckling, cracking, corrosion, deterioration and damage in accordance with workplace procedures
- 2.3 Connections between steel components are visually inspected and checked for signs of wear, looseness, cracking, corrosion, deterioration and damage in accordance with workplace procedures
- 2.4 Protective coatings on steel structures and components are visually inspected and checked for condition
- 2.5 Relevant inspection aids are used to perform detailed inspection to identify defects in accordance with workplace procedures
- 2.6 Defects or deficiencies are identified in accordance with workplace procedures

#### **3 Take appropriate actions**

- 3.1 Major defects affecting safe passage are acted on as soon as possible in accordance with workplace procedures
- 3.2 Defects and deficiencies are reported to enable repairs to be effected in a timely manner

#### **4 Complete documentation**

- 4.1 Examination schedule or work report data is completed in accordance with workplace procedures
- 4.2 Documentation on work undertaken is completed and processed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIB3088 Examine steel structures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- communicating effectively with others when conducting a detailed steel structures examination
- examining a range of structure types
- following operational instructions and work sequences when undertaking steel structures examination
- identifying relevant sections of applicable state/territory legislated rail safety requirements, codes of practice and/or guidelines
- identifying, selecting and using measuring instruments and equipment
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- planning and organising remedial work
- reading and interpreting relevant plans and specifications
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance workplace procedures
- taking appropriate action for identified steel structures defects
- working collaboratively with others when conducting a detailed steel structures examination.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- fault detection techniques
- hazards that may exist when conducting a detailed steel structures examination and ways of controlling the risks involved
- problems that may occur when conducting a detailed steel structures examination and action that can be taken to report or resolve these problems
- relevant rail danger zones
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions
- steel structures examination methods and techniques
- workplace procedures for conducting a detailed steel structures examination.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in appropriate range of situations in the rail environment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.
-

# TLIB3094 Check and repair track geometry

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to check and repair track geometry, in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes determining the job requirements, restoring track geometry, checking track compliance after work and completing required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally in a team environment. It involves the application of routine operational principles and procedures when checking and repairing track geometry, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Determine job requirements**

- 1.1 Faults and deficiencies in track geometry are identified, and work required to restore track to required standard is determined
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Appropriate repair methods are identified to enable repairs to be effected
- 1.4 Job requirements and resources are determined in accordance with workplace procedures and scope of work

#### **2 Restore track geometry**

- 2.1 Survey data is used as required to establish correct geometry
- 2.2 Appropriate lifting and lining methods and equipment are used to lift and line track to restore running surface to required geometry in accordance with workplace standards and procedures

#### **3 Confirm compliance after work**

- 3.1 Track geometry is checked for compliance with acceptance rail industry standards
- 3.2 Vertical and horizontal structural and overhead clearances are checked against required standards to allow safe passage of trains
- 3.3 Track structure where work has been undertaken is checked for compliance with standards required to enable reinstatement of service
- 3.4 Appropriate operating conditions are applied in accordance with workplace procedures

#### **4 Complete documentation**

- 4.1 Required documentation procedures and processes are confirmed
- 4.2 Documentation is filled in legibly and proofread
- 4.3 Documentation is processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3094B Check and repair track geometry.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB3094 Check and repair track geometry

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- adapting to differences in equipment in accordance with operating procedures
- applying relevant workplace procedures
- assessing and identifying track geometry defects against required rail industry standards and applying appropriate restrictions
- certifying track to operational standards after repair work is completed
- checking the horizontal and vertical alignment, cross-level and cant of the track
- confirming safe clearances of any structure erected adjacent to or over the track
- determining appropriate repair methods for identified faults
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying, selecting and using tools and equipment required for checking and repairing track geometry
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- planning and organising work, including determining work requirements and work methods
- reading and interpreting relevant instructions, procedures, information, plans, drawings and specifications
- recording and reporting results of track work in accordance with workplace procedures
- reporting and rectifying identified problems within limits of own role, in accordance with regulatory requirements and workplace procedures
- selecting and using appropriate lifting and lining methods, and equipment to correct geometry defects
- using appropriate lifting and lining methods, and equipment to restore running surface to required geometry
- using appropriate measurement methods to assess and correct track geometry defects
- working systematically with required attention to detail without injury to self or others, or

damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation and/or work authorisation and work completion processes and procedures
- emergency procedures
- fault detection techniques
- hazards that may exist when checking and repairing track geometry, and ways of controlling the risks involved
- maintenance and measuring of track geometry workplace procedures
- problems that may occur when checking and repairing track geometry, and action that can be taken to report or resolve these problems that may occur when measuring track geometry
- relevant rail industry standards, technical specifications and workplace manuals and/or procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant work recording procedures
- track certification requirements
- track geometry acceptance standards
- track geometry maintenance methods and techniques
- track stability and the work requirements for different weather conditions
- workplace procedures for checking and repairing track geometry.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in appropriate range of situations in the rail environment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, rail industry standards, regulations, codes of practice and operation manuals.

# TLIB3095 Check and repair points and crossings

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to check and repair points and crossings in accordance with rail industry standards, safeworking and regulatory requirements, and workplace procedures.

It includes determining job requirements, maintaining components and tolerances, installing components, conducting post-installation checks and completing required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when checking and repairing points and crossings, as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Determine job requirements

#### 2 Maintain components and tolerances

#### 3 Install components

#### 4 Conduct post-installation checks

#### 5 Complete documentation

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Faults and deficiencies in points and crossings are identified and work required to restore track to required standard is determined

1.2 Hazards are identified, risks are assessed and control measures are implemented

1.3 Repair methods are appropriately identified to enable repairs to be made

1.4 Job requirements are determined in accordance with workplace procedures, and scope of work activities and resources required are identified

2.1 Clearances are adjusted to specifications to ensure correct functioning

2.2 Wearing surfaces are cleaned and lubricated as required to minimise wear and ensure correct functioning

3.1 New components are prepared to specifications ready for installation

3.2 Tools and equipment required for installation are identified and accessed

3.3 New and replacement components are installed in accordance with rail industry standards and workplace procedures

4.1 Functional checks are carried out to ensure correct operation

4.2 Completed work is checked for compliance to acceptance standards in accordance with workplace procedures

4.3 Operating conditions are applied appropriately, in accordance with workplace procedures

5.1 Required documentation procedures and processes are confirmed

5.2 Documentation is filled in legibly and proofread

5.3 Documentation is processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3095A Check and repair points and crossings.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB3095 Check and repair points and crossings

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- applying relevant workplace procedures
- cleaning and adjusting components, and/or preparing and installing components
- completing relevant documentation accurately and to required workplace standards
- determining work requirements and work methods
- identifying defects in special track work affecting safe operation
- identifying faults and appropriate repair methods
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying/locating defects in points and crossings
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures, information, technical data, standards and drawings
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- selecting and applying appropriate lubricants in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and workplace procedures
- selecting and using appropriate installation and repair techniques and equipment to correct defects in points and crossings
- using appropriate equipment and methods to make accurate measurements on points and crossings
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- component replacement techniques
- defect tolerances and maintenance techniques
- defects that can occur in points and crossings
- documentation and record keeping requirements
- features and principles of operation of points and crossings
- hazards that may exist when checking and repairing points and crossings, and ways of controlling the risks involved
- installation and maintenance requirements for manual points equipment
- measurement techniques
- points and crossings rail industry Standards
- problems that may occur when checking and repairing points and crossings, and action that can be taken to report or resolve these problems
- relevant clearances/tolerances specifications required when checking and repairing points and crossings
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- special maintenance requirements for points and crossings
- types of lubricants and SDSs/MSDSs and manufacturer instructions
- workplace procedures for checking and repairing points and crossings.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in appropriate range of situations in the rail environment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

## **TLIB3098 Examine concrete/masonry structures**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to examine concrete/masonry structures in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes obtaining all relevant previous reports, performing a detailed examination, initiating appropriate necessary actions and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment.

It involves the application of routine operational principles and procedures when conducting a detailed concrete/masonry structures examination, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

B – Equipment Checking and Maintenance

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Obtain previous reports**

1.1 Operational history of structure from available sources is reviewed

1.2 Previous defects identified in reports are noted to enable rechecking of problem areas

1.3 Relevant personnel are contacted to identify reported complaints or indications of wear or damage

#### **2 Perform detailed examination**

2.1 Hazards are identified, risks are assessed and risk control measures are implemented

2.2 Concrete and masonry structures and components are visually inspected and checked for signs of movement, deterioration and damage in accordance with workplace procedures

2.3 Relevant inspection aids are used to perform detailed inspection to identify defects in accordance with workplace procedures

2.4 Defects or deficiencies are identified in accordance with workplace procedures

#### **3 Take appropriate actions**

3.1 Major defects affecting safe passage are acted on as soon as possible in accordance with workplace procedures

3.2 Defects and deficiencies are reported to enable repairs to be effected in a timely manner

#### **4 Complete documentation**

4.1 Examination schedule or work report data is completed in accordance with workplace procedures

4.2 Documentation on work undertaken is completed and processed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3098A Examine concrete/masonry structures.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB3098 Examine concrete/masonry structures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- communicating effectively with others when conducting a detailed concrete/masonry structures examination
- examining a range of structure types
- following operational instructions and work sequences when undertaking concrete/masonry structures examination
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying, selecting and using measuring instruments and equipment
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant plans and specifications
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- taking appropriate action for identified defects
- working collaboratively with others when conducting a detailed concrete/masonry structures examination.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- concrete/masonry structures examination methods and techniques
- fault detection techniques
- hazards that may exist when conducting a detailed concrete/masonry structures examination and ways of controlling the risks involved
- problems that may occur when conducting a detailed concrete/masonry structures examination and action that can be taken to report or resolve these problems
- relevant rail danger zones
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions
- workplace procedures for conducting concrete/masonry structures examinations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIB3099 Examine track infrastructure

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to examine track and right of way infrastructure in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes preparing for examination, examining track and right of way, analysing examination results, and reporting findings.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when examining track infrastructure, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare for examination**

- 1.1 Examination task is reviewed to establish requirements
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Equipment appropriate to task is selected and checked for correct operation in accordance with manufacturer instructions and workplace procedures

#### **2 Examine track**

- 2.1 Examination task is undertaken in accordance with workplace procedures
- 2.2 Condition of track or right of way infrastructure being examined is recorded in accordance with workplace procedures
- 2.3 Measurements of track or right of way infrastructure being examined are taken and recorded in accordance with workplace procedures

#### **3 Analyse examination results**

- 3.1 Available data is analysed to identify trends, defects or variations from allowable tolerances
- 3.2 Appropriate action is taken to appropriately safeguard operation of the rail system

#### **4 Report findings**

- 4.1 Examination schedule or work report data is completed in accordance with workplace procedures
- 4.2 Defects and deficiencies are reported to enable repairs to be effected in a timely manner
- 4.3 Results of analysis are prioritised and reported to relevant personnel in accordance with workplace procedures
- 4.4 Documentation is completed as required, in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3099A Examine track infrastructure.

## Links

# Assessment Requirements for TLIB3099 Examine track infrastructure

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- applying relevant workplace procedures
- applying track and right of way infrastructure condition standards
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- measuring, calculating and recording data accurately
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures, information, plans, drawings and specifications
- reading and interpreting track recording data
- reporting and/or rectifying identified problems, in accordance with regulatory requirements and workplace procedures
- using and maintaining measurement equipment and tools
- working systematically with required attention to detail without injury to self or others
- writing clear and succinct reports.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- data analysis techniques for analysing track and right of way infrastructure parameters
- hazards that may exist when examining track and right of way infrastructure, and ways of controlling the risks involved
- problems that may occur when examining track, track geometry and right of way and action that can be taken to report or resolve these problems
- relevant records procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- track and right of way defects and their causes
- track and right of way infrastructure rail industry standards
- track deterioration rates under differing operating conditions
- track measurement equipment and techniques
- workplace procedures for examining, recording and reporting track and right of way infrastructure.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in appropriate range of situations in the rail environment.

# TLIB3100 Visually inspect track infrastructure

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to visually inspect track infrastructure in accordance with safeworking and regulatory requirements, and workplace procedure.

It includes patrolling the track and right of way infrastructure, and recording and documenting identified defects in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when visually inspecting railway track infrastructure, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Patrol track infrastructure

- 1.1 Appropriate inspection method is used to conduct visual examinations of track and right of way, to identify defects
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Visual examinations are performed in accordance with workplace procedures and inspection schedules
- 1.4 Variations from allowable tolerances, defects and deficiencies likely to affect train safety are identified to enable appropriate action to be taken on the repairs required
- 1.5 Unsatisfactory conditions are assessed in terms of seriousness and priority

#### 2 Record and document defects

- 2.1 Defects and deficiencies are reported to enable repairs to be undertaken in a timely manner
- 2.2 Inspection schedule or work report data is completed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3100A Visually inspect track infrastructure.

# Assessment Requirements for TLIB3100 Visually inspect track infrastructure

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- applying relevant workplace procedures
- completing relevant documentation
- identifying different types of track and right of way infrastructure defects
- identifying, selecting and using tools and equipment
- implementing contingency plans
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- recording and documenting identified defects in relation to workplace standards
- recording and reporting results of visually inspecting track and right of way in required format
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- contents of relevant technical specifications and manuals
- defect deterioration under different operating conditions
- different types of track and right of way defects
- emergency procedures
- fault identification and analysis techniques
- hazards that may exist when visually inspecting track and right of way, and ways of controlling the risks involved
- problems that may occur when visually inspecting track geometry and right of way infrastructure, and action that can be taken to report or resolve these problems
- relevant rail danger zones
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- techniques for prioritising defect rectification
- track and right of way infrastructure rail industry standards
- workplace procedures for visually inspecting track and right of way infrastructure.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in appropriate range of situations in the rail environment.

## **TLIB3102 Adjust rail**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to adjust rail in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes identifying and determining the requirements for rail adjustment, undertaking rail adjustment, and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when adjusting rail, as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

B – Equipment Checking and Maintenance

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Identify and determine rail adjustment requirements**

- 1.1 Appropriate adjustment method is determined and required resources are arranged
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Adjustment length is established depending on track geometry and location, in accordance with workplace procedures

#### **2 Adjust rail**

- 2.1 Anchor points are identified and created as required to enable rail adjustment to be undertaken in accordance with workplace procedures
- 2.2 Track is released and rail is vibrated to achieve stress free state in accordance with workplace procedures
- 2.3 Measurements are appropriately taken and used to calculate adjustment requirements in accordance with workplace procedures
- 2.4 Rail length is adjusted using appropriate method to achieve desired rail stress
- 2.5 Rail is joined using determined appropriate method in accordance with workplace procedures
- 2.6 Track fastenings are restored in accordance with workplace procedures
- 2.7 Creep control marks are installed or reset in continuous welded rail track as required, in accordance with workplace procedures

#### **3 Complete documentation**

- 3.1 Completed work is checked for compliance with rail industry standards to ensure safe operations of trains and compliance records are processed
- 3.2 Documentation is completed and processed, in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3102A Adjust rail.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB3102 Adjust rail

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- ensuring track is restored in accordance with operational procedures
- establishing appropriate adjustment length
- identifying and determining appropriate methods for adjusting rail
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- installing and resetting creep control marks in continuous welded rail track, as required
- interpreting and following operational instructions and prioritising work
- measuring and calculating adjustment condition
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- taking appropriate measurements and calculating adjustments
- using rail adjustment procedures for different track configurations
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- creep control marks
- documentation and record keeping requirements
- hazards that may exist when adjusting rail and ways of controlling the risks involved
- problems that may occur when adjusting rail and action that can be taken to report or resolve these problems
- rail adjustment methods and critical aspects of rail stress
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- temperature and alignment limitations on rail gap adjustment
- workplace procedures for adjusting rail.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIB3105 Prepare electric passenger train

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to check and assess the operational capabilities of equipment prior to an electric passenger train entering service.

It includes inspecting equipment and work area, checking the operational capability of equipment and its safety devices, identifying and assessing the impact of faults on safety and work requirements, and recording and reporting the results of inspection and testing in accordance with workplace procedures.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is generally performed without supervision and within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
<b>1 Carry out preparation checks</b>	<ul style="list-style-type: none"><li>1.1 Location of train is determined in accordance with allocation procedures</li><li>1.2 Organisational safety controls are identified and acted on</li><li>1.3 Relevant work health and safety (WHS)/occupational health safety (OHS) requirements are followed to prevent injury and damage</li></ul>
<b>2 Inspect, start and test equipment</b>	<ul style="list-style-type: none"><li>2.1 Required checks, procedures and standards are identified prior to start up</li><li>2.2 Prior to start up, relevant equipment is inspected in accordance with workplace pre-operational functional safety check procedures and operational instructions</li><li>2.3 Train is started up in accordance with operational instructions</li><li>2.4 Following start up, relevant equipment and components are tested in accordance with workplace procedures</li><li>2.5 Aspects of equipment found to be outside operational specifications are reported for appropriate action</li><li>2.6 Safety warning systems are checked for operational effectiveness</li><li>2.7 Control systems are checked in accordance with workplace policies and procedures</li><li>2.8 Train braking systems are applied and released to ensure they are operating correctly</li><li>2.9 Faults are identified and appropriate corrective action is taken to ensure operational safety</li></ul>
<b>3 Carry out visual inspection and check condition of train</b>	<ul style="list-style-type: none"><li>3.1 Visual inspection is conducted in accordance with workplace procedures to identify any defects that would prevent safe transit</li><li>3.2 Communication is maintained with relevant personnel to ensure safe, efficient and complete inspection</li><li>3.3 Condition of train consist is visually inspected and faults are rectified and/or reported</li></ul>

- 3.4 Conditions requiring urgent action are noted and appropriate action is taken to initiate immediate response
- 3.5 Passenger facilities are checked to ensure they are clean
- 3.6 Passenger operated equipment is visually checked to ensure operational readiness

#### **4 Record and report faults and/or defects**

- 4.1 Faults and/or defects are accurately reported in accordance with organisational requirements
- 4.2 Accurate records are kept in accordance with organisational requirements
- 4.3 Potential defects that may affect future safety of equipment are reported

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIB3105A Prepare electric passenger train.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB3105 Prepare electric passenger train

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- checking and testing train equipment in accordance with workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- inspecting electric passenger train exterior visually in accordance with workplace procedures
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information, labels and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant equipment and communications technology when checking and assessing equipment operational capability
- selecting and using required personal protective equipment conforming to work health and safety (WHS)/occupational health and safety (OHS) and industry standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- equipment characteristics, capabilities and limitations
- housekeeping procedures
- operational safety requirements when preparing an electric passenger train for service
- problems that may occur when preparing an electric passenger train for service, and appropriate action that can be taken to resolve these problems
- relevant safety, WHS/OHS, and environmental procedures and regulations
- workplace procedures for checking and assessing equipment operational capability when preparing an electric passenger train for service.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIB3108 Test operation of electric passenger train braking system

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to test the operation of an electric train braking system in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes preparing for train brake testing, testing train brake operation, dealing with identified faults, and recording brake test results in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is generally performed without supervision and within a team environment.

It involves the application of operational principles, regulations, safeworking codes, protocols and procedures when testing electric train braking systems, as part of workplace activities across a variety of operational contexts within the Australian rail industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare for train brake testing**

1.1 Work health and safety (WHS)/occupational health and safety (OHS) legislation, codes of practice, policies and procedures are identified and followed

1.2 Hazards are identified, risks are assessed and risk control measures are implemented

1.3 Train is isolated or secured in accordance with workplace procedures to make the work area safe for testing

1.4 Brake system is checked to ensure it is ready for testing

#### **2 Test train brake operation**

2.1 Brake tests are conducted to ensure compliance to required rail industry standards

2.2 Modified brake tests are conducted in accordance with workplace procedures to meet required rail industry standard, as required

2.3 Continuity tests are conducted in accordance with workplace procedures to ensure train braking system meets functional specifications

2.4 Brakes are applied and released on train and their function is confirmed

2.5 Faults are identified and appropriate corrective action is taken to ensure operational safety

#### **3 Deal with identified faults**

3.1 Identified faults are reported, rectified or isolated in accordance with workplace procedures

3.2 Confirmation/verification to continue is determined in accordance with workplace procedures

3.3 Detachment/uncoupling arrangements are made in accordance with operational requirements, as required

3.4 Faults or defects found during brake tests are recorded and/or reported in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3108A Test operation of electric passenger train braking system.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB3108 Test operation of electric passenger train braking system

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying rail safety practices and procedures
- assessing brake system defects
- conducting all relevant continuity brake system tests in accordance with workplace procedures and functional specifications
- conducting pre-safety tasks prior to brake test
- documenting outcomes of operation tests in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in brakes and related equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable minimum rail industry standards and codes of practice and/or guidelines
- brake systems, their components and their operation
- communications protocols
- diagnostic techniques
- documentation requirements relating to brake testing
- emergency procedures
- possible faults and appropriate reporting and rectification/isolation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- relevant workplace procedures
- types of brake tests and their purpose.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIB3112 Prepare electric passenger train as part of guard duties

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required as part of guard duties to check and assess the operational capabilities of equipment when preparing an electric passenger train prior to entering service.

It includes preparing for checks; inspecting, starting and testing equipment; checking equipment; carrying out visual checks and reporting the results of inspection and testing in accordance with workplace procedures and relevant regulatory requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines and workplace requirements.

Preparing an electric passenger train will ensure equipment:

- is free from damage, leaks and obstructions that may prejudice safety or limit operational capability
- operates within prescribed limits.

Safety checks and equipment tests are performed without supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Prepare for checks

#### 2 Inspect, start and test equipment

#### 3 Check equipment and visually inspect train

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Location of train is determined in accordance with allocation procedures

1.2 Organisational safety controls are identified and acted upon

1.3 Hazards are identified, risks are assessed and risk control measures are implemented

1.4 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are followed to prevent injury and damage

2.1 Checks, procedures and standards are identified as required

2.2 Relevant equipment is inspected in accordance with workplace pre-operational functional safety check procedures and operational instructions

2.3 Relevant equipment is started and equipment and components are tested in accordance with workplace procedures

2.4 Aspects of equipment found to be outside operational specifications are reported and/or recorded for appropriate action

2.5 Warning systems are checked for operational effectiveness

2.6 Control systems are checked in accordance with workplace policies and procedures

2.7 Visual inspection of train braking systems is conducted to ensure compliance with organisational specifications

3.1 Visual inspection is conducted in accordance with workplace procedures to identify any defects that would prevent safe transit

3.2 Communication is maintained with relevant personnel to ensure safe, efficient and complete inspection

3.3 Condition of train consist is visually inspected and faults are

rectified and/or reported

3.4 Conditions requiring urgent action are noted and appropriate action is taken to initiate immediate response

3.5 Passenger facilities are checked to ensure they are clean and fit for service

3.6 Passenger operated equipment is visually checked to ensure operational readiness

#### **4 Record and report faults and defects**

4.1 Faults and defects are accurately recorded and/or reported in accordance with workplace requirements

4.2 Accurate records are kept in accordance with workplace requirements

4.3 Potential defects that may affect future safety of equipment are recorded and/or reported

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIB3112A Prepare electric passenger train as part of guard duties.

## **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB3112 Prepare electric passenger train as part of guard duties

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- checking and testing train equipment is free from damage, leaks and obstructions that may prejudice safety or limit operational capability, in accordance with workplace requirements
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying typical faults/defects that may occur on electric passenger trains
- implementing contingency plans
- inspecting the interior of an electric passenger train visually
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and completing activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information, labels and signs
- reporting, recording and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- equipment characteristics, capabilities and limitations
- housekeeping procedures
- operational safety requirements when preparing an electric passenger train for service
- problems that may occur when preparing an electric passenger train for service and appropriate action that can be taken to resolve these problems
- workplace procedures for checking and assessing operational capability of equipment when preparing an electric passenger train for service.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# **TLIB3113 Diagnose and rectify minor faults on motive power units and rolling stock**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to identify, diagnose and rectify minor faults on motive power units and rolling stock in accordance with workplace requirements.

It includes identifying maintenance and/or repair requirements, conducting minor maintenance and routine repairs, checking and reporting minor maintenance and/or repairs, and providing support in accordance with workplace procedures.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine minor fault diagnosis and rectification procedures when maintaining the safety and operation of equipment across a variety of operational rail transport contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

B – Equipment Checking and Maintenance

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Identify maintenance and repair requirements**

- 1.1 Hazards are identified, risks are assessed and risk control measures are implemented
- 1.2 Condition of rolling stock and/or motive power unit ancillary equipment is assessed
- 1.3 Faulty or damaged components or equipment are identified and assessed for component exchange or minor repair
- 1.4 Equipment and tools required are identified and obtained
- 1.5 Equipment is prepared and work areas are checked to ensure maintenance, repair and component exchange activities are carried out in a safe environment
- 1.6 Faulty or damaged components or equipment that are not able to be repaired or exchanged are reported for further maintenance in accordance with workplace procedures

#### **2 Conduct minor maintenance and routine repairs**

- 2.1 Minor maintenance, routine repairs and component exchange are carried out in accordance with manufacturer specifications and workplace procedures
- 2.2 Equipment, tools and materials required are operated, applied and handled in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements and manufacturer specifications to prevent injury and damage

#### **3 Check and report minor maintenance and repairs**

- 3.1 Minor maintenance, repairs and component exchange activities are checked for compliance with safety requirements and workplace procedures
- 3.2 Equipment is checked to confirm it has been restored to operational standards
- 3.3 Maintenance, repair and component exchange activities are documented and filed in accordance with workplace procedures and regulatory requirements
- 3.4 Work area is checked for cleanliness and operational safety

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3113B Diagnose and rectify minor faults on motive power units and rolling stock.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB3113 Diagnose and rectify minor faults on motive power units and rolling stock

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- carrying out checks on different types of motive power units and rolling stock
- carrying out minor maintenance, repair and component exchange activities correctly
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying possible faults and defects and appropriate corrective measures
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to different tools and equipment
- reading and interpreting relevant instructions, procedures, information and signs
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- relevant sections of applicable state/territory legislated rail safety requirements, codes of practice and/or guidelines, and safeworking system requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection requirements
- tools and equipment used when diagnosing and rectifying minor faults and the procedures and precautions for their care, use and storage
- typical minor repair problems that can occur, and related action that should be taken in

accordance with workplace procedures

- workplace component and material supply system
- workplace documentation and records requirements
- workplace procedures and policies for diagnosing and repairing minor faults.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIB3118 Apply awareness of railway fundamentals

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to develop an awareness of railway fundamentals. This includes the track, trackside equipment, fixed structures, rail vehicles and rolling stock.

This unit is intended for people entering the rail industry who will be required to enter and work in the rail corridor.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify track and structures terminology and features

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1.1 Basic terminology is explained for track, trackside equipment and fixed structures

- 1.2 Features of track, including geography, geometry and classes are explained
  - 1.3 Bridges and other infrastructure categories and their purpose are identified
  - 1.4 Other principal structure types and their purpose are identified
  - 1.5 Relevant stakeholders to whom structural faults and anomalies are reported, are identified
- 2 Identify overhead and/or electrical components**
- 2.1 Principal overhead and/or other electrical components and their purpose are identified
  - 2.2 Power sources are identified
  - 2.3 Methods of isolation and their purpose are identified in accordance with organisational procedures
- 3 Identify rail track vehicles and rolling stock**
- 3.1 Types of trains and rolling stock are identified
  - 3.2 Types of machines used for track installation and maintenance are identified
  - 3.3 Types of rail track vehicles are identified
  - 3.4 Relevant stakeholders to whom rolling stock faults and anomalies are reported, are identified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3118A Apply awareness of railway fundamentals.

# TLIB3120 Test mechanical signalling equipment and isolate faults

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to test mechanical signalling equipment and isolate faults in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes undertaking preparation tasks, conducting testing and/or isolating equipment, checking equipment operation, and finalising the testing and/or isolation of equipment, in accordance with workplace procedures and relevant regulatory requirements.

People achieving competence in this unit will need to fulfil rail industry standards and/or guidelines relevant to testing mechanical signalling equipment and isolating faults.

Work is performed under minimal supervision, generally within a team environment. It involves the application of regulatory requirements and workplace procedures when testing and isolating faults in mechanical signalling equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to test and/or isolate equipment**

- 1.1 Testing is appropriately sequenced in accordance with job schedule
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Appropriate personnel are consulted to ensure work is coordinated effectively with others involved on the worksite
- 1.4 Location of equipment to be tested/isolated is determined from job specifications and diagrams
- 1.5 Tools, equipment and testing devices needed to test and/or isolate are obtained in accordance with established procedures and are checked for correct operation and safety

#### **2 Test and/or isolate equipment**

- 2.1 Initial visual check of operational equipment is performed to identify equipment faults
- 2.2 Equipment is isolated in accordance with relevant operational rules and procedures
- 2.3 Established methods for dealing with unexpected situations are discussed with appropriate personnel and documented
- 2.4 Unexpected situations are dealt with safely and with the approval of an authorised person

#### **3 Check equipment operation**

- 3.1 Approval to conduct a check of equipment operation is obtained in accordance with relevant operational rules and procedures
- 3.2 Authorised equipment check is carried out to identify equipment faults in accordance with operating procedures
- 3.3 Operational effectiveness of equipment is confirmed through observation during train movements as required
- 3.4 Equipment faults are correctly identified and recorded, and appropriate corrective action is taken
- 3.5 Service equipment is locked and secured to prevent unauthorised access

- 3.6 Work completion is documented and appropriate personnel are notified in accordance with established procedures
- 4 Finalise testing and/or isolation of equipment**
- 4.1 Test results are documented in accordance with organisation requirements
- 4.2 Faulty or replaced equipment is tagged and reported to the appropriate personnel for rectification
- 4.3 Fully operational equipment is handed over to approved personnel ensuring that hand over procedures are accurately followed and final documentation is completed

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3120A Test mechanical signalling equipment and isolate faults.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB3120 Test mechanical signalling equipment and isolate faults

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying basic mechanical, hydraulic, pneumatic and electrical awareness to testing and fault identification activities
- applying relevant workplace procedures
- checking equipment operation
- communicating effectively with others
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant meters, gauges, equipment and tools when testing mechanical signalling equipment and isolating faults
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics, capabilities and limitations of mechanical signalling equipment
- characteristics, capabilities and limitations of testing devices
- documentation and record requirements
- fault-finding techniques and procedures
- faults that may occur with equipment, and appropriate action that can be taken to report and/or rectify the identified faults in the equipment or its components
- focus of operation of work systems, equipment, management and site operating systems for testing mechanical signalling equipment and isolating faults
- guidelines relating to the safe use of machinery and equipment including the tagging of unserviceable or damaged items
- mechanical, hydraulic, pneumatic and electrical awareness
- operational safety requirements for signalling equipment
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant rail industry standards, rules, codes of practice and guidelines, and/or organisational procedures for inspecting, testing, isolating and tagging mechanical signalling equipment and isolating faults
- site layout and obstacles
- tools, meters, gauges and equipment used when testing mechanical signalling equipment and isolating faults and the precautions and procedures that should be followed in their use
- workplace procedures for testing mechanical signalling equipment and isolating faults, including tagging and reporting faulty equipment and components.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry

standards, rules, codes of practice and operation manuals.

# TLIB3123 Apply awareness of motive power unit fundamentals

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to apply awareness of motive power unit fundamentals.

It includes identifying basic motive power unit types, air/ vacuum systems, electrical systems, mechanical systems, control systems, cooling and lubricating systems, auxiliary equipment, safety system equipment and their basic operations.

This unit is intended as an introduction for people entering the rail industry who will be working on or around motive power units.

A motive power unit is a rail vehicle used to provide the power to move itself or other vehicles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
<b>1 Identify basic motive power unit types</b>	1.1 Different motive power unit types and/or gauges currently in operation are identified 1.2 Basic layout of different types of motive power unit is identified 1.3 Hazards are identified, risks are assessed and risk control measures are implemented
<b>2 Identify air/vacuum systems and operation</b>	2.1 Basic air/vacuum components relevant to motive power unit type are located and identified 2.2 Uses and operation of air/vacuum system are identified
<b>3 Identify electrical systems and operation</b>	3.1 Basic electrical components relevant to motive power unit type are located and identified 3.2 Uses and operation of electrical system are identified
<b>4 Identify mechanical systems and operation</b>	4.1 Basic mechanical components relevant to motive power unit type are located and identified 4.2 Uses and operation of mechanical system are identified
<b>5 Identify control systems and operation</b>	5.1 Basic control system components relevant to motive power unit type are located and identified 5.2 Uses and operation of control systems are identified
<b>6 Identify cooling and lubricating systems and operation</b>	6.1 Basic cooling and lubricating system components relevant to motive power unit type are located and identified 6.2 Uses and operation of cooling and lubricating systems are identified
<b>7 Identify auxiliary equipment and its operation</b>	7.1 Basic auxiliary equipment components relevant to motive power unit type are located and identified 7.2 Uses and operation of auxiliary equipment are identified
<b>8 Identify safety system equipment and their</b>	8.1 Safety system equipment and components relevant to motive power types are identified

**operation**

8.2 Uses and operation of safety system equipment are identified

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

**Unit Mapping Information**

This unit replaces and is equivalent to TLIB3123A Apply awareness of motive power unit fundamentals.

**Links**

# Assessment Requirements for TLIB3123 Apply awareness of motive power unit fundamentals

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying motive power unit types including:
  - air/vacuum systems
  - auxiliary equipment
  - control systems
  - cooling and lubricating systems
  - electrical systems
  - mechanical systems
  - safety system equipment and their operations.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- fundamentals of track layout
- electrical components, as required
- mechanical equipment, as required
- relevant railway terminology
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- relevant workplace and operational procedures
- types of motive power units including:
  - air/vacuum systems

- auxiliary equipment
- control systems
- cooling and lubricating systems
- electrical systems
- mechanical systems
- safety system equipment and their operations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIB3124 Apply awareness of steam locomotive fundamentals

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to apply an awareness of steam locomotive fundamentals.

It includes configurations, components, types of equipment and their basic operation.

This unit is intended as an introduction for people entering the rail industry who will be working on or around steam locomotives.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify basic locomotive

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Different locomotive configurations are identified

- configurations**
- 1.2 Basic layout of different types of locomotive is identified
  - 1.3 Hazards are identified, risks are assessed and risk control measures are implemented
- 2 Identify boiler construction and components**
- 2.1 Different boiler construction and configurations are identified
  - 2.2 Primary boiler fittings are identified
  - 2.3 Boiler secondary fittings are identified
- 3 Identify air/vacuum systems and operation**
- 3.1 Basic air/vacuum components relevant to locomotive type are located and identified
  - 3.2 Uses and operation of air/vacuum system are identified
- 4 Identify electrical systems and operation**
- 4.1 Basic electrical components relevant to locomotive type are located and identified
  - 4.2 Uses and operation of electrical system/s are identified
- 5 Identify mechanical systems and operation**
- 5.1 Basic mechanical components relevant to locomotive type are located and identified
  - 5.2 Uses and operation of mechanical system are identified
- 6 Identify control systems and operation**
- 6.1 Basic control system components relevant to locomotive type are located and identified
  - 6.2 Uses and operation of control systems are identified
- 7 Identify lubricating systems and operation**
- 7.1 Basic lubricating systems and components relevant to locomotive type are located and identified
  - 7.2 Uses and operation of lubricating systems are identified
- 8 Identify auxiliary equipment and its operation**
- 8.1 Basic auxiliary equipment components relevant to locomotive type are located and identified
  - 8.2 Uses and operation of auxiliary equipment are identified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB3124A Apply awareness of steam locomotive fundamentals.

## Links

# Assessment Requirements for TLIB3124 Apply awareness of steam locomotive fundamentals

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- identifying equipment on a steam locomotive including:
  - air/vacuum systems and operation
  - auxiliary equipment and its operation
  - boiler construction and components
  - control systems and operation
  - electrical systems and operation
  - lubricating systems and operation
  - mechanical systems and operation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- boiler and/or pressure vessel construction configuration
- fundamentals of track layout
- locomotive boiler code of practice
- relevant railway terminology
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- steam locomotive fundamentals including:
  - auxiliary equipment
  - cooling and lubricating systems

- electrical components and equipment, as required
- lubricating systems
- mechanical equipment, as required
- primary boiler fittings
- safety system equipment and components
- secondary boiler fittings
- steam locomotive control systems
- types of air/vacuum equipment
- workplace procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIB3126 Assist in the testing of heritage train braking systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to assist in testing heritage train braking systems, in accordance with organisational procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes assisting with locomotive brake testing, train brake examination and releasing handbrake.

This unit is intended for people who will be assisting with testing brake systems on steam and/or heritage locomotives and trains under the direction of the driver.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |   |   |
|---|---|
| <b>1 Assist with locomotive brake testing</b> | <ul style="list-style-type: none"><li>1.1 Under the direction of the driver, the application of the locomotive brake is observed to ensure it is within operational parameters</li><li>1.2 Work health and safety (WHS)/occupational health and safety (OHS) requirements, codes of practice, policies and procedures are identified and followed</li><li>1.3 Hazards are identified, risks are assessed and control measures are implemented</li><li>1.4 Work area is made safe for testing by ensuring locomotive is isolated and secured in accordance with workplace procedures</li><li>1.5 Problems, faults or malfunctions are identified, responded to and/or reported in accordance with workplace procedures</li></ul> |
| <b>2 Assist with train brake examination</b>  | <ul style="list-style-type: none"><li>2.1 Under the direction of the driver, train brake is applied in accordance with organisational procedures</li><li>2.2 Under the direction of the driver, train brake is released in accordance with organisational procedures</li></ul>  |
| <b>3 Apply and release handbrake</b>          | <ul style="list-style-type: none"><li>3.1 Under the direction of the driver, handbrake is applied in accordance with organisational procedures</li><li>3.2 Under the direction of the driver, handbrake is released in accordance with organisational procedures</li></ul>  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIB3126 Assist in the testing of heritage train braking systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying and removing handbrakes and brakes on a heritage locomotive
- applying relevant safeworking system and workplace procedures
- assisting the driver with a heritage train brake test
- communicating effectively with the train driver
- identifying job hazards and required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information and signs
- reporting identified problems, faults or malfunctions promptly, in accordance with organisational procedures
- working collaboratively with the driver when testing heritage locomotive and train braking systems.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- brake systems, their components and their operation
- procedures to test heritage train brake systems
- relevant work health and safety (WHS)/occupational health and safety (OHS) operational procedures and regulations

- types of brake tests and their purpose
- when it is applicable to release train brake.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the rail corridor workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIB3129 Conduct pre-movement checks on rolling stock

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to conduct pre-movement checks on rolling stock in accordance with relevant workplace practices, regulations and codes of practice.

It includes conducting pre-movement checks, moving and stabling the rolling stock in accordance with organisational requirements.

This unit applies to people required to carry out these activities as part of a maintenance role within a defined location.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Carry out pre-movement checks**
  - 1.1 Allocation of rolling stock is checked in conjunction with appropriate personnel
  - 1.2 Rolling stock to be inspected and prepared is located
  - 1.3 Hazards are identified, risks are assessed and control measures are implemented
  - 1.4 Completion of all maintenance activities is confirmed
  - 1.5 Checks for safety controls are conducted in accordance with organisational procedures
  - 1.6 Internal and external integrity checks are conducted in accordance with organisational procedures
  - 1.7 Fluid levels are checked and appropriate action is taken as required
- 2 Move rolling stock**
  - 2.1 Rolling stock is shunted in accordance with manufacturer instructions and/or organisational procedures, and faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up
  - 2.2 For critical or serious equipment faults that cannot be readily rectified, rolling stock shunt is halted, faulty equipment is isolated and tagged, and problem is reported for rectification
  - 2.3 Functionality of equipment is interpreted to confirm effective air and electrical operation, and where a problem is indicated, action is taken to determine the cause and to rectify or report the situation
  - 2.4 Fluid levels are rechecked after starting and appropriate action is taken as required
- 3 Stable rolling stock**
  - 3.1 Correct clearances for stabling location are confirmed
  - 3.2 Rolling stock is secured in accordance with organisational procedures
  - 3.3 Personal or equipment lockouts are applied in accordance with organisational procedures as required
  - 3.4 Appropriate documentation is confirmed, completed and processed in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

# Assessment Requirements for TLIB3129 Conduct pre-movement checks on rolling stock

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in rolling stock and associated equipment and procedures
- documenting outcomes of inspecting rolling stock
- identifying all activities carried out prior to moving rolling stock in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying rolling stock stabling requirements
- identifying who is responsible for authorising moving rolling stock
- interpreting and following instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting and following relevant instructions, procedures, information and signs
- shunting rolling stock in accordance with organisational procedures
- working collaboratively with others inspecting and preparing rolling stock.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- procedures for managing and controlling hazardous situations when preparing and checking rolling stock
- relevant safeworking system and workplace procedures
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and relevant regulations

- requirements for completing relevant documentation when inspecting and preparing rolling stock.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIB4042 Conduct inspection of safeworking procedures and infrastructure

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to conduct inspection of safeworking procedures and infrastructure in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes planning and preparing for inspection, inspecting safeworking infrastructure, inspecting for compliance with safeworking procedures, completing required reports and taking remedial action.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment.

It involves the application of regulatory requirements and operational principles and procedures when conducting an inspection of safeworking procedures and infrastructure, as part of workplace activities across a variety of operational contexts within the Australian rail system. Safeworking procedures and infrastructure inspected may include any of those in use within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan and prepare for inspection**

#### **2 Inspect safeworking infrastructure**

#### **3 Inspect for compliance with safeworking procedures**

#### **4 Complete reports and take remedial action**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Operational procedures and infrastructure to be inspected are identified

1.2 Inspections are prioritised in accordance with inspection schedule and availability of required resources

1.3 Hazards are identified, risks are assessed and control measures are implemented

1.4 Relevant instructions and information are gathered

2.1 Safeworking equipment is inspected to ensure it is appropriately located and operating correctly

2.2 Safeworking facilities are checked for correct operation and maintenance

3.1 Safeworking forms are checked for sufficient supply and correct completion

3.2 Work practices of relevant rail safety workers are checked to ensure compliance with safeworking procedures

4.1 Reports are completed and processed in accordance with workplace requirements

4.2 Follow-up action is taken as required to ensure safe passage of train and equipment and is documented in accordance with safeworking procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB4042A Conduct inspection of safeworking procedures and infrastructure.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB4042 Conduct inspection of safeworking procedures and infrastructure

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in situations and infrastructure in accordance with operating procedures
- applying relevant safeworking and workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- planning and conducting inspection of safeworking procedures and infrastructure
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- documentation/authorisation processes and procedures
- emergency management plan
- hazardous situations associated with workplace activities and ways of controlling the risks involved
- hazards that may be identified during an inspection of safeworking procedures and infrastructure, and ways of controlling the risks involved
- inspection schedule
- operational equipment manuals and operating instructions
- problems that may occur when inspecting safeworking procedures and infrastructure, and action that can be taken to report or resolve these problems
- relevant rail industry standards, safeworking rules, technical specifications and manuals
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant safeworking system inspection records and procedures
- safeworking system requirements
- workplace procedures for inspecting safeworking procedures and infrastructure.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace safeworking procedures, rail industry standards, rules, regulations, codes of practice and operation manuals.

# TLIB4071 Install and maintain pole mounted switches and transformers

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to install and maintain pole mounted switches and transformers in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes planning installation and maintenance, preparing worksite, installing switches and transformers in accordance with workplace specifications, maintaining switches and transformers, and completing work.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rail industry standards and/or guidelines.

People working on energised overhead or underground systems or electrical equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent to carry out the work involved.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when installing and maintaining pole mounted switches and transformers, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Plan installation and maintenance

- 1.1 Works order is analysed and confirmed as required by site inspection
- 1.2 Resources required for the job are identified and scheduled in accordance with operational procedures
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Switch equipment and transformer are transported to worksite
- 1.5 Liaison and communication issues are resolved in accordance with organisational negotiation procedures

#### 2 Prepare the worksite

- 2.1 Work plan and resources required are confirmed/checked at worksite
- 2.2 Personnel participating in the activity, including plant operators and contractors, are fully briefed
- 2.3 Road signs, barriers and warning devices are positioned to ensure a safe worksite
- 2.4 Safeworking practices are observed on or about the running track/line
- 2.5 Worksite is laid out in accordance with work plan to ensure minimum waste and rework
- 2.6 Systems/circuits are isolated as required, proved safe to work on in accordance with works order, and electrical permits are received/accepted/returned as required

#### 3 Install switches and transformers

- 3.1 Switch equipment, transformers and earthing systems are installed and connected
- 3.2 Transformer is tested and voltage output is adjusted

- 3.3 Visual inspection is carried out to confirm equipment/apparatus is in a safe condition to test and/or commission
- 3.4 Commission is carried out in accordance with works order/plan
- 4 Maintain switches and transformers**
  - 4.1 Maintenance requirement is confirmed by detailed site diagnosis
  - 4.2 Maintenance, including removal, repair, replacement and reinstatement, is carried out in accordance with works order and the condition of equipment
- 5 Complete work**
  - 5.1 Worksite is rehabilitated
  - 5.2 Appropriate authority is notified on completion of work
  - 5.3 Records and documentation for updating system data are completed and processed

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB4071A Install and maintain pole mounted switches and transformers.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB4071 Install and maintain pole mounted switches and transformers

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying appropriate repair/testing practices and procedures
- applying relevant workplace procedures
- communicating effectively with others
- communicating plans, intentions and safety criteria to others
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- performing calculations required for installation procedures
- reading and interpreting relevant instructions, procedures, information, technical data, manuals and drawings
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- selecting and using test equipment and testing techniques
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice, rail industry standards and/or guidelines
- characteristics, capabilities and uses of types of pole mounted switches and transformers
- distribution system earthing procedures as they relate to installing and maintaining electrical switches and transformer equipment
- hazards that may exist when installing and maintaining pole mounted switches and transformers
- live/energised line working techniques and equipment
- problems that may occur when installing and maintaining pole mounted switches and transformers
- relevant electrical/electronic theory and principles
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant organisation and commercial publications, including construction manuals and technical instructions as they relate to installing and maintaining electrical equipment
- relevant recording and documentation procedures
- relevant sections of railway safety management plans, rail industry standards and the Australian/New Zealand Standard for Wiring Rules
- relevant technical regulatory requirements
- statutory/organisation traffic control requirements, work zone regulations and guidance signals for planned operations
- switching or de-energising procedures and maintenance operations
- visual inspection workplace procedures
- workplace procedures for installing and maintaining pole mounted switches and transformers.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment

currently used in industry

- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIB4076 Inspect and prepare a heritage motive power unit

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to inspect and prepare a heritage motive power unit in accordance with workplace procedures and the requirements of relevant rail regulations and codes of practice.

It includes checking and preparing a motive power unit, visually examining a motive power unit, conducting in-cab checks, and starting and positioning a motive power unit for service in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Start heritage motive power unit**

- 1.1 Roster is checked and interpreted for day's train driving activities
- 1.2 Allocation of motive power units is checked in conjunction with network control officer and roster clerk
- 1.3 Motive power unit to be inspected and prepared is located in the yard
- 1.4 Motive power unit is started in accordance with manufacturer instructions and operating faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up
- 1.5 Where critical or serious equipment faults cannot be readily rectified, motive power unit is shut down, faulty equipment is isolated and tagged and problem is reported for rectification
- 1.6 Instruments and gauges are observed and readings are interpreted to confirm effective operation, including air and electrical
- 1.7 Action is taken to determine cause of identified problems in instruments and gauges, and situation is rectified or reported
- 1.8 Fluid levels are rechecked after starting and appropriate action is taken as required
- 1.9 Pre-departure checks are carried out to ensure motive power unit is braking and powering effectively and is safe to move

### **2 Prepare for heritage motive power unit work activities**

- 2.1 Roster is checked and interpreted for day's train driving activities
- 2.2 Allocation of motive power units is checked as identified by notices, in conjunction with Network Control Officer and roster clerk
- 2.3 Hazards are identified, risks are assessed and risk control measures are implemented
- 2.4 Trackside safety and basic electrification awareness procedures are followed while locating allocated motive power unit in the yard

- 2.5 Motive power unit inspection and preparation duties are identified and interpreted
- 2.6 Train schedules, notices and other operational and regulatory documentation are accessed and interpreted in accordance with workplace procedures
- 2.7 Communication equipment required for day's operations is obtained and checked to ensure it is functional
- 2.8 Required personal protective equipment is obtained for use prior to day's train driving activities
- 2.9 Motive power unit to be inspected and prepared is located in the yard

### **3 Inspect and prepare heritage motive power unit**

- 3.1 Features, functions and location of motive power unit and associated equipment are identified
- 3.2 Logbook is checked to confirm serviceability of unit
- 3.3 Preparation and safety checks are conducted, in accordance with work health and safety (WHS)/occupational health and safety (OHS) and other workplace policies and procedures
- 3.4 Motive power unit, kit and equipment are checked and defects and deficiencies are recorded and rectified, isolated, tagged or reported in accordance with workplace procedures and regulatory requirements
- 3.5 Availability of appropriate fuel, lubricating oils, water, coolant and sand quantities, as required, are checked against journey requirements and appropriate action is taken to replenish them as required
- 3.6 Relevant WHS/OHS and regulatory requirements are followed

### **4 Conduct in-cab checks**

- 4.1 Motive power unit is checked in correct sequence and all equipment is confirmed to be operating to optimum requirements
- 4.2 Cab layout is checked and confirmed that it meets operating requirements
- 4.3 Pre-departure mechanical checks are correctly performed and correct functioning of equipment is confirmed in accordance with workplace procedures and manufacturer operating requirements

- 4.4 Supervisory controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly
- 4.5 Communications equipment is checked to ensure it is functioning correctly and appropriate action is taken if it is not working correctly
- 4.6 Seat, windows, blinds, air conditioners, heaters and other personal in-cab equipment are checked and adjusted for correct functionality, safety and comfort
- 4.7 Auxiliary equipment is checked and is confirmed to be operational in accordance with operating requirements
- 4.8 Fire extinguisher, emergency toolbox and other required equipment are checked to confirm they are in position and meet operational requirements

## **5 Complete documentation**

- 5.1 Required documentation concerning inspecting motive power unit is completed and processed in accordance with workplace procedures and regulatory requirements
- 5.2 Logbook and other service records on the motive power unit are completed and filed in accordance with workplace procedures and regulatory requirements

## **6 Position heritage motive power unit**

- 6.1 Authority to move and position motive power unit is obtained and relevant personnel are advised of intention and procedures
- 6.2 Motive power unit is operated in accordance with operational procedures and regulatory requirements, within operating and operational constraints
- 6.3 Motive power unit is positioned in accordance with operational requirements and directions
- 6.4 Motive power unit performance is monitored during operation to confirm effective operation or to identify defects
- 6.5 Equipment defects are identified, reported, rectified and recorded or relevant personnel are advised for assistance
- 6.6 Relevant WHS/OHS and regulatory requirements are followed to ensure safety and to prevent injury and damage
- 6.7 Network Control Officer and other relevant personnel are

advised that motive power unit is secured in required position and is ready for service

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB4076A Inspect and prepare a heritage motive power unit.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB4076 Inspect and prepare a heritage motive power unit

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in heritage motive power units and associated equipment and procedures
- checking and replenishing fluids and carrying out lubrication requirements on a heritage motive power unit
- checking electronic communications equipment is in accordance with required protocol
- conducting a visual inspection of a heritage motive power unit and associated equipment
- documenting outcomes of visual inspection of a motive power unit
- identifying and assessing motive power unit defects and deficiencies and taking appropriate action to report, isolate, repair or replace identified defective equipment in accordance with workplace procedures
- identifying job hazards and required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- preparing a heritage motive power unit prior to service
- reading and interpreting relevant instructions, procedures and information and signs
- working collaboratively with others as part of a train crew.
- 

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines, local rail regulations and codes of practice
- braking and safety system procedures for a heritage motive power unit
- cleaning requirements for a heritage motive power unit
- emergency procedures
- external features of a heritage motive power unit that must be checked during a pre-operational visual inspection
- fuel tank capacity and range, where applicable
- functions of all supervisory indicators and controls and related checks for correct operation
- functions of auxiliary systems on a heritage motive power unit and related checks for correct operation
- in-cab pre-operational checks for a heritage motive power unit
- local procedures and operating requirements
- lubrication requirements for a heritage motive power unit
- operating controls procedures to start, accelerate, decelerate and stop a heritage motive power unit
- operating procedures for a heritage motive power unit
- principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
- procedures for adjusting controls to optimise the operation of a heritage motive power unit
- procedures for checking fuel and fluid levels and carrying out lubrication processes on a motive power unit
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing and controlling hazardous situations when preparing and starting up a heritage motive power unit
- procedures for minor maintenance including cleaning, brake shoe/pad replacement and sand box requirements
- procedures for operating electronic communications equipment in accordance with required protocol
- procedures for starting and operating auxiliary systems on a heritage motive power unit
- relevant personnel
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- requirements for completing relevant documentation
- start-up procedures for a heritage motive power unit
- typical defects that can occur on a heritage motive power unit and related action that should be taken.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment, and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIB4077 Inspect and prepare a heritage steam locomotive

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to inspect and prepare a heritage steam locomotive in accordance with relevant workplace practices, rail regulations and codes of practice.

It includes checking and preparing a heritage steam locomotive, visually examining a locomotive, conducting in-cab checks, and moving and positioning a locomotive for service in accordance with workplace procedures.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Light fire and raise steam**

- 1.1 Roster is checked and interpreted for day's train driving activities
- 1.2 Allocation of locomotives is checked in accordance with notices and in conjunction with network control officer and roster clerk
- 1.3 Locomotive to be inspected and prepared is located in the yard
- 1.4 Pre-light-up procedures applicable to the type of fire box are identified and followed to enable safe boiler operation
- 1.5 Light-up procedures and safety practices are followed to build up steam within the boiler and to ensure 'smoking' is minimised
- 1.6 Instruments and equipment are monitored to ensure safe and efficient operation as steam pressure is raised to operating level
- 1.7 Where a problem is indicated, action is taken to determine the cause and to rectify or report the situation

### **2 Prepare for heritage steam locomotive work activities**

- 2.1 Roster is checked and interpreted for day's train driving activities
- 2.2 Allocation of locomotives is checked as identified by notices and in conjunction with network control officer and roster clerk
- 2.3 Hazards are identified, risks are assessed and risk control measures are implemented
- 2.4 Trackside safety and basic electrification awareness procedures are followed while locating allocated locomotive in the yard
- 2.5 Locomotive inspection and preparation duties are identified and interpreted
- 2.6 Train schedules, notices and other operational and regulatory documentation are accessed and interpreted
- 2.7 Communications equipment required for day's operations is obtained and checked to ensure it is functional

- 2.8 Required personal protective equipment is obtained for use prior to day's train driving activities
  - 2.9 Locomotive to be inspected and prepared is located in the yard
- 3 Inspect and prepare heritage steam locomotive**
- 3.1 Features, functions and location of locomotive and associated equipment are identified
  - 3.2 Logbook is checked to confirm serviceability of locomotive
  - 3.3 Preparation and safety checks are conducted, in accordance with work health and safety (WHS)/occupational health and safety (OHS) and other workplace policies and procedures
  - 3.4 Locomotive, kit and equipment are checked and defects and deficiencies are recorded and rectified, isolated, tagged or reported in accordance with workplace procedures and regulatory requirements
  - 3.5 Availability of appropriate fuel, lubricating oils, water and sand quantities are checked against journey requirements and appropriate action is taken to replenish them as required
  - 3.6 Relevant WHS/OHS and regulatory requirements are followed
- 4 Conduct in-cab checks**
- 4.1 Locomotive is checked in correct sequence and all equipment is confirmed to be operating to optimum requirements
  - 4.2 Cab layout is checked and confirmed that it meets operating requirements
  - 4.3 Pre-departure mechanical checks are correctly performed and correct functioning of equipment is confirmed in accordance with workplace procedures and operating requirements
  - 4.4 Operational controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly
  - 4.5 Communications equipment is checked to ensure it is functioning correctly and appropriate action is taken if it is not working correctly
  - 4.6 Auxiliary equipment is checked and is confirmed to be operational in accordance with operating requirements

4.7 Fire extinguisher, safety equipment, emergency toolbox and any other required equipment are checked to confirm they are in position and meet operational requirements

4.8 Pre-departure checks are carried out to ensure locomotive is braking and powering effectively and is safe to move

## **5 Complete documentation**

5.1 Required documentation concerning inspecting, preparing and starting up locomotive is completed in accordance with workplace procedures and regulatory requirements

5.2 Logbook and other service records on the locomotive are completed in accordance with workplace procedures and regulatory requirements

## **6 Position heritage steam locomotive**

6.1 Authority to move and position locomotive is obtained and relevant personnel are advised of intention and procedures

6.2 Locomotive is operated in accordance with standard procedures and regulatory requirements, within operating and operational constraints

6.3 Locomotive is positioned in accordance with operational requirements and directions

6.4 Locomotive performance is monitored during operation to confirm effective operation or to identify defects

6.5 Equipment defects are identified, rectified and recorded or relevant personnel are advised for assistance

6.6 Relevant WHS/OHS and regulatory requirements are followed to ensure safety and to prevent injury and damage

6.7 Network control officer and other relevant personnel are advised that locomotive is secured in the required position and is ready for service

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB4077A Inspect and prepare a heritage steam locomotive.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB4077 Inspect and prepare a heritage steam locomotive

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in heritage steam locomotives and associated equipment and procedures
- checking and replenishing fluids and carrying out lubrication requirements on a heritage steam locomotive
- conducting an inspection and pre-operational check of a heritage steam locomotive and associated equipment
- identifying and assessing heritage steam locomotive defects and deficiencies and taking appropriate action to report, isolate, repair or replace identified defective equipment in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- operating electronic communications equipment to required protocol
- positioning a heritage steam locomotive in readiness for service
- preparing a heritage steam locomotive prior to service
- reading and interpreting relevant instructions, procedures and information and signs.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- braking and safety system procedures for a heritage steam locomotive
- cleaning requirements for a heritage steam locomotive
- communications equipment checks and operating procedures
- emergency procedures
- external features of a heritage steam locomotive that must be checked during a pre-operational visual inspection
- fuel capacity and range (where applicable)
- functions of all supervisory indicators and controls and related checks for correct operation
- functions of auxiliary systems on a heritage steam locomotive and related checks for correct operation
- in-cab pre-operational checks for a heritage steam locomotive
- inspection procedures for a heritage steam locomotive
- local procedures and operating requirements
- locomotive controls, instruments and indicators and their purpose, location and use
- lubrication requirements for a heritage steam locomotive
- operating controls to start, accelerate, decelerate and stop a heritage steam locomotive
- operating procedures for a heritage steam locomotive
- principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
- procedures for adjusting controls to optimise the operation of a heritage steam locomotive
- procedures for checking fuel and fluid levels and carrying out lubrication processes on a heritage steam locomotive
- procedures for identifying equipment defects, assessing and reporting for appropriate action
- procedures for lighting fire and raising steam on a heritage steam locomotive
- procedures for managing and controlling hazardous situations when preparing and firing up a heritage steam locomotive
- procedures for minor maintenance including cleaning, brake shoe/pad replacement and sand box requirements
- procedures for operating communications equipment in accordance with required protocol
- procedures for starting and operating auxiliary systems on a heritage steam locomotive
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS),

and environmental procedures and regulations

- requirements for completing relevant documentation when inspecting and preparing a heritage steam locomotive
- typical defects that can occur on a heritage steam locomotive and related action that should be taken.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIB4078 Carry out a train roll-by inspection

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to carry out a train roll-by inspection in accordance with organisational policies and procedures, and relevant safeworking requirements.

It includes preparing and conducting a visual roll-by inspection of crossing/passing trains from the ground or on-train to identify equipment, load security or other defects or failure and reporting and/or actioning the inspection results.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Prepare for roll-by inspection**
  - 1.1 Appropriate documentation is read to confirm inspection requirements
  - 1.2 Position is taken at planned time to complete roll-by inspection without personal risk
  - 1.3 Conditions are assessed and necessary actions are taken to ensure roll-by inspection will be effective
- 2 Conduct roll-by inspection**
  - 2.1 Identification and status of train is confirmed with relevant personnel
  - 2.2 Condition of rolling stock is observed and identified faults are noted
  - 2.3 Communication is maintained with relevant personnel to ensure safe, efficient and complete roll-by inspection
  - 2.4 Inspection is conducted in accordance with work health and safety (WHS)/occupational health and safety (OHS), network owner and/or organisational policies and procedures to prevent injury and damage
  - 2.5 Faults requiring immediate action are noted and appropriate action is taken to stop train
- 3 Report and action roll-by inspection results**
  - 3.1 Appropriate personnel are informed of results of roll-by inspection and any faults or defects requiring rectification
  - 3.2 Inspection results are recorded, reported and/or filed as required, in accordance with organisational policies and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB4078A Carry out a train roll-by inspection.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB4078 Carry out a train roll-by inspection

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others
- conducting roll-by inspection of a moving train to identify equipment, load security or other defects or failure
- documenting results of roll-by inspection including faults or defects requiring rectification in accordance with workplace operational procedures
- identifying safe position from which to conduct roll-by inspection
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information and signs
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications protocols
- contingency management processes
- relevant information/documents
- relevant legislated rail safety requirements, and codes of practice and/or guidelines
- relevant rail danger zones
- relevant safety, WHS/OHS and environmental protection regulations
- relevant sections of the Australian Dangerous Goods (ADG) Code and regulations
- relevant standards, rules, codes of practice, guidelines and specifications for all items requiring examination
- relevant workplace procedures
- types of roll-by inspection of a moving train.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIB4079 Conduct a general train examination

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to conduct a general train examination in accordance with organisational procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes preparing for examination; undertaking a general train examination including rolling stock integrity, components and loading; and reporting examination results.

This unit applies to train drivers required to conduct a general train examination.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Prepare for general train examination**
  - 1.1 Location of examination and information about items to be examined are obtained and activities are planned
  - 1.2 Materials, documentation and equipment required for the examination are identified, obtained and prepared for use
  - 1.3 Hazards are identified, risks are assessed and risk control measures are implemented
  - 1.4 Examination is started at planned time and location to minimise delays to train availability
  - 1.5 Train identification and status is confirmed and required actions are taken to ensure train remains safe for duration of examination
  - 1.6 Individual responsibilities required to complete examination are agreed with relevant personnel
  - 1.7 Conditions are assessed and necessary actions are taken to ensure examination is effective
- 2 Undertake general train examination**
  - 2.1 Examination is undertaken in accordance with organisational procedures
  - 2.2 Communication is maintained with relevant personnel to ensure safe, efficient and complete examination
  - 2.3 Condition of rolling stock, couplings and load are examined and dimensions are confirmed appropriate to wagon type and gauge outline requirements
  - 2.4 Irregularities and load contamination are identified and appropriate action is taken in accordance with organisational and/or network owner policies and procedures
  - 2.5 Obvious wagon or carriage faults and their locations are reported in accordance with organisational policies and procedures
  - 2.6 Apparent problems are investigated further and corrected where possible
- 3 Report examination results**
  - 3.1 Conditions requiring urgent action are reported in accordance with organisational policies and procedures, and appropriate action is taken to initiate immediate response
  - 3.2 Relevant personnel are informed of remedial or other action required prior to completion of examination

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB4079A Conduct a general train examination.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB4079 Conduct a general train examination

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- conducting a general train examination
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with organisational procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and organisational procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) requirements
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- contingency management processes
- emergency procedures
- guidelines relating to equipment capability and limitations
- organisational policies and procedures for conducting a general train examination
- rail industry standards and specifications for all items requiring examination
- relevant legislated rail safety requirements, codes of practice and/or guidelines

- relevant rail danger zones
- relevant safety, WHS/OHS, and environmental procedures and regulations
- relevant workplace procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations*, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## Links

Companion Volume implementation guides are found in VETNet -

# **TLIB4080 Identify, diagnose and rectify minor faults on motive power units and rolling stock**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to identify, diagnose and rectify minor faults on motive power units and rolling stock in accordance with workplace requirements.

This includes identifying repair requirements, conducting minor repairs, checking and reporting minor repairs.

Work must be carried out in accordance with organisational procedures and regulations, and safeworking codes of practice relevant to fault diagnosis and rectification.

Work involves the application of routine minor fault diagnosis and rectification procedures when maintaining the safety and operation of motive power units and rolling stock across a variety of operational rail transport contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

B – Equipment Checking and Maintenance

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Identify faults, defects and deficiencies**

- 1.1 Operational capability of rolling stock and/or motive power unit ancillary equipment is evaluated
- 1.2 Faulty or damaged components or equipment are identified and assessed
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Impact of faults on work requirements is identified and safe operating capabilities are evaluated
- 1.5 Work areas and equipment are made safe for inspection

#### **2 Rectify minor faults**

- 2.1 Minor repairs and/or isolations are carried out in accordance with manufacturer specifications and organisational procedures
- 2.2 Equipment, tools and required materials are operated, applied and handled in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements and manufacturer specifications, to prevent injury and damage

#### **3 Check and report minor repairs and/or isolations**

- 3.1 Minor repairs and/or isolations are checked for safety compliance
- 3.2 Equipment is checked to ensure it conforms to organisational standards
- 3.3 Action taken is reported/recorded in accordance with company procedure
- 3.4 Operational capabilities are monitored and further evaluated
- 3.5 Communication is maintained with relevant personnel

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB4080A Identify, diagnose and rectify minor faults on motive power units and rolling stock.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIB4080 Identify, diagnose and rectify minor faults on motive power units and rolling stock

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- carrying out checks of different types of motive power units and rolling stock
- carrying out minor repairs in accordance with workplace procedures
- communicating effectively with others
- identifying job hazards and required action to minimise, control or eliminate identified hazards
- identifying possible faults, defects and deficiencies, and appropriate remedial activities
- implementing contingency plans
- making decisions based on evaluation of faults, defects, deficiencies and operational capabilities
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- operating tools and equipment in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications protocols
- emergency procedures
- isolation systems

- operational requirement of rolling stock
- possible faults, defects and deficiencies, and appropriate remedial activities
- relevant rail industry standards and certification requirements
- relevant state/territory regulations, codes of practice and system of safeworking requirements
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- relevant workplace procedures and policies
- tools and equipment required for the task and the procedures and precautions for their care, use and storage
- typical minor repair problems that can occur, and related action that should be taken
- workplace documentation and record requirements.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

## TLIB4081 Provision a motive power unit

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to provision a motive power unit prior to it entering service.

It includes checking fuel, oil, water and sand levels, and replenishing them as required; restocking consumables; general housekeeping and completing documentation as required.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

B – Equipment Checking and Maintenance

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Check and replenish fuel, oil, water and

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Motive power unit is positioned and secured at required service point in accordance with organisational requirements

**sand levels**

- 1.2 Hazards are identified, risks are assessed and risk control measures are implemented
- 1.3 Fuel, oil, water and sand levels are checked in accordance with manufacturer and/or organisational procedures
- 1.4 Fuel, oil, water and sand levels are replenished as required in accordance with manufacturer and organisational procedures
- 1.5 Equipment is used in accordance with manufacturer and organisational procedures
- 1.6 Faults and/or deficiencies are identified and reported to relevant personnel

**2 Check and restock consumables**

- 2.1 Consumables are checked for availability and serviceability
- 2.2 Replacement consumables are acquired in accordance with organisational procedures
- 2.3 Faults and/or deficiencies are identified and reported to relevant personnel

**3 Carry out general housekeeping**

- 3.1 Rubbish is removed and disposed of in accordance with organisational policies and procedures
- 3.2 Relevant areas of motive power unit are cleaned in accordance with organisational policies and procedures
- 3.3 Cleaning materials are utilised in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and organisational policies and procedures
- 3.4 Faults and/or deficiencies are identified and reported to relevant personnel
- 3.5 Documentation is completed in accordance with organisational policies and procedures

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB4081A Provision a motive power unit.

# Assessment Requirements for TLIB4081 Provision a motive power unit

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- checking and replenishing consumables in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and workplace operational procedures
- checking logbook and service records
- conducting general housekeeping
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following workplace operational instructions
- reading and interpreting relevant instructions, procedures, information, signs, symbols and diagrams.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- potential faults and/or deficiencies
- relevant motive power unit terminology and layout
- relevant rail danger zones
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- relevant workplace procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIB4082 Set up motive power units in multi-coupled consist

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to set up one or more motive power units in multi-coupled consist in accordance with network owner and rail industry standards, rules, codes of practice and guidelines.

It includes preparing, setting up and conducting post start-up checks of motive power units in power or when being hauled dead or offline for multi-consist operation.

These operations are conducted as part of operating motive power units and may be carried out as part of a team of people working within rail operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Prepare motive power units for coupling**
  - 1.1 Identification and location of motive power units to be coupled is confirmed
  - 1.2 Hazards are identified, risks are assessed and risk control measures are implemented
  - 1.3 Motive power units are marshalled into desired position and orientation to meet consist requirements in accordance with organisational policies and procedures
- 2 Set up motive power units for multi-consist operation**
  - 2.1 Motive power units are coupled in accordance with manufacturer instructions and/or organisational procedures
  - 2.2 Relevant hose pipes and electrical connections are made in accordance with manufacturer instructions and/or organisational procedures
  - 2.3 Fuel lines are coupled as required in accordance with manufacturer instructions and/or organisational procedures
  - 2.4 Area is checked before pantographs are raised or lowered to ensure safety in accordance with organisational procedures, as required
- 3 Set up in-cab controls for multi-consist operation**
  - 3.1 Motive power unit controls are set up for multi-consist operation in accordance with manufacturer and/or organisational policies and procedures
  - 3.2 Vigilance and safety controls are set-up as required to ensure they are functioning correctly in multi-consist operation
  - 3.3 Motive power unit equipment is set up or adjusted for multi-consist operation in accordance with manufacturer and/or organisational policies and procedures
- 4 Perform post start-up checks**
  - 4.1 Post start-up checks are carried out to ensure all motive power units are braking and powering effectively and are safe to move, in accordance with manufacturer and/or organisational policies and procedures
  - 4.2 Handbrakes on all motive power units are applied/released in accordance with manufacturer and/or organisational policies and procedures
  - 4.3 Pantographs are raised or lowered in accordance with manufacturer and organisational procedures, as required
- 5 Haul dead motive**
  - 5.1 Motive power unit controls are set up for being hauled dead in motive power unit consist or in-train in accordance with

**power units**

manufacturer and/or organisational policies and procedures

- 5.2 Vigilance and safety controls are set up as required to ensure they are functioning correctly when being hauled dead in motive power unit consist or in-train
- 5.3 Motive power unit equipment is set up or adjusted for being hauled dead in motive power unit consist or in-train in accordance with manufacturer and/or organisational policies and procedures
- 5.4 Handbrakes are applied and released in accordance with manufacturer and/or organisational policies and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB4082A Set up motive power units in multi-coupled consist.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB4082 Set up motive power units in multi-coupled consist

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in motive power units and associated equipment and procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying where systems isolation is required
- implementing isolation where systems isolation is required
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information and signs
- setting up in-cab controls for multi-consist operations
- setting up motive power units for multi-consist operations
- working collaboratively with others inspecting and preparing a motive power unit.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- auxiliary systems on a motive power unit and related checks for correct operation
- braking and safety system procedures for motive power units
- capabilities, compatibilities and types of motive power units
- defects that can occur on motive power units and related action that should be taken
- electrical awareness
- external features of motive power units that must be checked during a visual inspection
- functions of all supervisory indicators and controls, and related checks for correct operation
- inspection procedures for motive power units

- isolation systems
- purpose and location of controls, monitoring devices, braking, power source and traction systems
- relevant legislated rail safety requirements, codes of practice and/or guidelines
- relevant rail danger zones
- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, regulations, codes, policies and workplace procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

# TLIB5010 Plan and implement maintenance schedules

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to plan and implement maintenance schedules according to relevant regulatory requirements, standards, workplace procedures and codes of practice including the Australian Dangerous Goods (ADG) Code.

It includes establishing maintenance requirements, organising maintenance activities and resources and completing required procedures and documentation.

Work is carried out under general guidance. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policies and procedures.

The unit generally applies to those with responsibility for resource coordination and allocation, who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

B – Equipment Checking and Maintenance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

**1 Establish maintenance requirements**

- 1.1 Equipment specifications, service requirements and workplace procedures are checked for recommended maintenance intervals and processes
- 1.2 Special requirements for maintenance of storage zones are identified
- 1.3 Comparisons with previous experience, future equipment use, work requirements and standard operating procedures are made to inform the planning process
- 1.4 Work plan and work schedule are developed
- 1.5 Internal and external contractors and/or maintenance providers are identified
- 1.6 Costings for process are identified based on work schedule (equipment/staff off-line), equipment manufacturer recommendations, charges for materials, equipment and consumables and internal/external labour charges
- 1.7 Required interruptions, processes and procedures are documented and recorded
- 1.8 Clearances for required maintenance costs are obtained

**2 Organise maintenance activities**

- 2.1 Work schedules and staff rosters are checked to identify times when maintenance process may be scheduled including optimum timing for any shut down
- 2.2 Permission from supervisory personnel is obtained for timing of maintenance to optimise the maintenance process and work
- 2.3 Detailed work plans are developed in accordance with work schedules, availability of expertise and resource availability
- 2.4 Employees with the required competencies are identified and appropriate training and assessment is facilitated as required
- 2.5 Approvals for work schedule, employee work pattern and maintenance schedule adjustments are obtained and work plan is refined to ensure maintenance program will maintain workplace outputs in terms of workplace policy

**3 Organise resources**

- 3.1 Required equipment, personnel and consumables are allocated in accordance with workplace procedures

- 3.2 Consumables, equipment and expertise are located and coordinated to meet maintenance work schedule
- 3.3 Externally sourced equipment, consumables and expertise are identified and appropriate arrangements are made for procurement
- 4 Complete maintenance procedures**
  - 4.1 Completed work is checked against maintenance schedule and work plan
  - 4.2 Records of work are completed and forwarded to appropriate personnel noting areas where additional maintenance is required to maintain optimum work output and equipment life

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIB5010A Plan and implement maintenance schedules.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIB5010 Plan and implement maintenance schedules

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when planning and implementing maintenance schedules
- completing documentation related to planning and implementing maintenance schedules
- ensuring the servicing of equipment in terms of maintenance schedule and standard operating procedures
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting instructions, procedures, information and signs relevant to planning and implementing maintenance schedules
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of current competencies within functional activity
- application of relevant Australian and international standards and associated certification requirements
- characteristics and capabilities of equipment, materials and processes used
- contacts and sources of information/documentation needed when planning and implementing maintenance systems
- operational maintenance systems, resources, management and workplace operating systems
- procedures for establishing and/or monitoring suitable maintenance systems
- procedures for identifying and evaluating information needed to plan and implement maintenance schedules
- procedures for identifying and interpreting maintenance requirements
- procedures for liaising with manufacturers and suppliers
- procedures for operating electronic communications equipment
- procedures for reviewing system options for maintenance operations including appropriate risk analysis
- quality and customer service standards, policies and procedures
- relative features and risks of various maintenance systems, their applications and processes, and issues involved in their use
- relevant Australian and international regulations, codes of practice and legislative requirements including local and international freight regulations
- relevant workplace documentation procedures
- resource availability including the competencies of individuals in the team/group.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIC0073 Conduct tram/light rail track cleaning operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to conduct tram/light rail track cleaning operations in accordance with rail industry standards, safeworking, regulatory requirements and organisational procedures.

It includes preparing vehicle for operations, operating cleaning vehicle, cleaning rail track and points, disposing of waste and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated tram/rail/road safety requirements and to comply with relevant rules, codes of practice and/or guidelines.

Operators must hold a medium-rigid vehicle licence.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Prepare for operations**

- 1.1 Vehicle logbook is checked in accordance with organisational requirements
- 1.2 Pre-operational vehicle checks are conducted
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Identified faults or defects are recorded in accordance with organisational requirements
- 1.5 Worn brushes are replaced

### **2 Operate cleaning vehicle on track**

- 2.1 Vehicle is driven to cleaning location and hazard warning equipment is operated in accordance with organisational policies and procedures
- 2.2 Fleet operations are notified when on site and ready to begin cleaning operations
- 2.3 Vehicle is correctly aligned with track and trolley is lowered in accordance with organisational and/or manufacturer requirements
- 2.4 Brushes are switched on for operation in accordance with organisational requirements
- 2.5 Vehicle is driven along the track and brushes are monitored for effective operation

### **3 Operate cleaning vehicle to clean points**

- 3.1 Correct alignment of points is verified before starting cleaning operations
- 3.2 At least 25 metres of track prior to automatic points are cleaned in accordance with organisational policies and procedures
- 3.3 Visual contact with assistant is maintained at all times when cleaning points
- 3.4 Cleaning vehicle is driven through points and, when points have been changed, reversed back through the points

### **4 Dispose of waste**

- 4.1 Collected waste is recycled or disposed of in accordance with organisational policies and procedures

- 4.2 Waste collection container/s and surrounding area of vehicle are cleaned
- 5 Complete documentation**
- 5.1 Required documentation procedures and processes are confirmed
- 5.2 Documentation is filled in legibly and proofread
- 5.3 Documentation is processed in accordance with organisational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC0073A Conduct tram/light rail track cleaning operations.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC0073 Conduct tram/light rail track cleaning operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant road rules, rail safeworking system and workplace procedures
- cleaning straight track and points to required workplace procedures
- communicating effectively with others when cleaning rail and points
- completing pre-work checks in accordance with manufacturers specification and operating procedures
- correcting operation when positioning the cleaning vehicle
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions and manuals
- replacing brushes in accordance with workplace procedures
- reporting and/or rectifying identified problems, faults or malfunctions in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation and record keeping requirements
- hazards that may exist when cleaning rail and points and ways of controlling the risks involved
- problems that may occur when cleaning rail and points and action that can be taken to report or resolve these problems
- relevant communications systems and procedures
- relevant rail danger zones
- relevant Australian road rules
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace procedures for cleaning tram/light rail track and points.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the tram/light rail workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, road rules, codes of practice and operation manuals.

## **TLIC0079 Operate a motive power unit within defined limits**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to operate and monitor a motive power unit within defined limits in accordance with relevant workplace practices, rail regulations and codes of practice.

It includes operating the controls of the motive power unit and monitoring its performance. It also includes working collaboratively with other train crew and relevant personnel.

Defined limits are considered to be yards, terminals or sidings.

This unit is not intended to be used as a qualification for operation of a motive power unit on a main line.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

C – Vehicle Operation

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

#### **ELEMENTS**

#### **PERFORMANCE CRITERIA**

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
<b>1 Operate motive power unit</b>	<p>1.1 Motive power unit is operated at low speed within the defined limits of operation</p> <p>1.2 Motive power unit handling techniques are interpreted and applied to eliminate or minimise risk of injury to personnel or damage to equipment and/or rolling stock</p> <p>1.3 Acceleration and braking techniques are applied safely to take into account track, road and weather conditions within the defined limits of operation</p> <p>1.4 Motive power unit is moved in a way that ensures all rolling stock is positioned safely in accordance with relevant codes of practice, yard or siding operating systems and related requirements</p>
<b>2 Work collaboratively</b>	<p>2.1 Safe operation of motive power unit is maintained in collaboration with relevant workplace personnel in accordance with operational requirements of the defined limits</p> <p>2.2 Constant communication is maintained with relevant personnel when operating a motive power unit within the defined limits, in accordance with organisational procedures and regulatory requirements</p> <p>2.3 Relevant personnel are advised of any changed/degraded conditions and/or emergency situations</p> <p>2.4 Directions provided by relevant personnel to the limited operation of the motive power unit are interpreted and applied to driving activities, in accordance with workplace procedures and applicable regulatory requirements</p>
<b>3 Follow all applicable rail regulatory requirements</b>	<p>3.1 Workplace procedures to operate a motive power unit within the defined limits are used</p> <p>3.2 Rail regulatory requirements applicable to operating a motive power unit within the defined limits of the track or road concerned are accessed, interpreted, clarified as required and applied</p>

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC0079A Operate a motive power unit within defined limits.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC0079 Operate a motive power unit within defined limits

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others
- identifying and assessing motive power unit defects and deficiencies, and taking appropriate action to report, isolate, repair or replace identified defective equipment in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- operating electronic communications equipment to required protocol
- operating a motive power unit within defined limits
- reading and interpreting relevant instructions, procedures, information and signs.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- motive power unit controls, instruments and indicators, and their purpose, location and use
- procedures for managing safety and hazardous situations
- procedures for operating and monitoring a motive power unit within defined limits
- procedures for operating and monitoring ancillary equipment on a motive power unit
- rail transport operator defined limits within the rail corridor
- relevant rail danger zones
- relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations

- relevant sections of applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- requirements for communicating and working collaboratively with relevant personnel
- speed and load limits for a motive power unit within the defined limits
- workplace procedures and operating requirements.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation with terminology as defined by the relevant rail transport operator safeworking system including workplace procedures, regulations, rules and codes of practice.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# **TLIC0083 Access rail track to travel track vehicle under a proceed authority**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to safely access the rail track to travel track machines under an Occupancy Authority in accordance with Rail Infrastructure Manager, legislative and regulatory requirements.

It includes accessing rail track, travelling track vehicle on track, and removing track vehicle from track.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety but does not include the implementation of worksite protection.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

C – Vehicle Operation

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Access rail track

- 1.1 Permission to occupy rail track is requested from Network Control Officer
- 1.2 Permission to occupy rail track is documented in accordance with Occupancy Authority requirements
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Appropriate personal protective equipment (PPE) is used conforming to Rail Infrastructure Manager requirements
- 1.5 Limits of travel are determined and agreed with Network Control Officer
- 1.6 Points are operated as required to gain access to the track as authorised by Network Control Officer
- 1.7 Situational awareness is maintained to identify local conditions and changed circumstances
- 1.8 Communication with Network Control Officer is maintained using communications rules and procedures

#### 2 Travel track vehicle on track

- 2.1 Speed limit is observed for type and classification of track vehicle and type of track
- 2.2 Speed is varied in accordance with local conditions
- 2.3 Permission is obtained to pass signals at STOP in accordance with workplace procedures
- 2.4 Position of points are identified and operated as required to establish correct direction as authorised by Network Control Officer
- 2.5 Signals are identified and obeyed
- 2.6 Level crossing protection equipment is operated for the safe passage of track vehicle/s in accordance with workplace procedures
- 2.7 Vigilance system is operated, as required in accordance with

workplace procedures

2.8 Unsafe situations and/or emergencies are identified, and appropriate action is taken in accordance with workplace procedures

**3 Remove track vehicle from track** 3.1 Network Control Officer is informed when track vehicle is off and clear of track

3.2 Occupancy Authority is correctly cancelled or fulfilled

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC0083A Access rail track to travel track vehicle under a proceed authority.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC0083 Access rail track to travel track vehicle under a proceed authority

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with network control officers, individuals and work groups
- explaining passing signals in accordance with safeworking rules and procedures
- explaining how to determine limits of travel
- following workplace policies, safeworking procedures and protocols
- identifying and obeying signals in accordance with safeworking and workplace procedures
- identifying appropriate response to typical unsafe situations and/or emergencies
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- travelling the track vehicle on track
- using appropriate personal protective equipment (PPE) conforming to Rail Infrastructure Manager requirements.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- operational communications protocols and systems
- operational vigilance control system
- Rail Infrastructure Manager emergency management plan, procedures and protocols
- Rail Infrastructure Manager and organisational policies, procedures, safeworking rules and protocols
- rail terminology as defined by the relevant Rail Infrastructure Manager system
- recognition of points, signals and location features
- relevant rail danger zones
- safeworking authorities as they relate to accessing rail track to travel track vehicle.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

# **TLIC0084 Access rail track to travel track vehicles under manual block working conditions**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to travel a track vehicle or convoy of track vehicles under manual block working conditions in accordance with Rail Infrastructure Manager, legislative and regulatory requirements.

It includes planning for travel movements, accessing track, travelling track vehicle/s on track to worksite, and clearing limit of travel.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety but does not include the implementation of worksite protection.

All activities are performed under established rules and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

C – Vehicle Operation

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan for travel movements**

- 1.1 Travel requirements are established and application for approval is initiated
- 1.2 Movements are confirmed with Network Control Officer prior to travel
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Pre-start briefing is conducted with track vehicle operators to clarify travel movements and their responsibilities, in accordance with advertised approval and workplace procedures

#### **2 Access track**

- 2.1 Permission to occupy track is requested from Network Control Officer and documented as required
- 2.2 Appropriate personal protective equipment (PPE) is used in accordance with Rail Infrastructure Manager requirements
- 2.3 Limits of travel are identified and protection of the route by Network Control Officer is confirmed
- 2.4 Stand alone signalling control equipment is identified and points are operated as required to gain access to the track as authorised by Network Control Officer
- 2.5 Changed local conditions are identified
- 2.6 Communications with Network Control Officer is maintained using appropriate communications protocols and systems, in accordance with Rail Infrastructure Manager requirements and workplace procedures

#### **3 Travel track vehicle/s on track to worksite**

- 3.1 Communications protocols and systems are used to coordinate the convoy as required
- 3.2 Speed limit is maintained for type of vehicle/s and track conditions
- 3.3 Speed limit is varied in accordance with local conditions
- 3.4 Permission is obtained to pass signals at STOP in accordance with workplace procedures

- 3.5 Track vehicle is managed to be able to stop short of other track vehicles or obstruction on track
- 3.6 Stand alone signalling control equipment is identified and points are operated as required, to establish correct direction as authorised by Network Control Officer
- 3.7 Signals are identified and obeyed
- 3.8 Level crossing protection equipment is operated as required, for the safe passage of track vehicle/s in accordance with workplace procedures
- 3.9 Unsafe situations and/or emergencies are identified and appropriate action is taken in accordance with workplace procedures

#### **4 Clear limit of travel**

- 4.1 Network Control Officer is informed when track vehicle/s has arrived and is clear of limit of travel
- 4.2 Stand alone signalling control equipment is identified and points are operated as required
- 4.3 Authority to travel is recorded in accordance with organisational procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIC0084A Access rail track to travel track vehicles under manual block working conditions.

# Assessment Requirements for TLIC0084 Access rail track to travel track vehicles under manual block working conditions

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with Network Control Officer, individuals and work groups
- explaining appropriate response to unsafe situations and/or emergencies
- following workplace policies, safeworking procedures and protocols
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying unsafe situations and emergencies
- planning travel movements and identifying limits of travel
- travelling track vehicle on track to worksite
- using appropriate personal protective equipment (PPE) that conforms to Rail Infrastructure Manager requirements.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- operational communications protocols and systems
- Rail Infrastructure Manager safeworking system and organisational requirements, rules, policies, workplace procedures and protocols
- Rail Infrastructure Manager policies, procedures and protocols for identified unsafe situations or emergencies relevant to accessing rail track to travel track vehicles under manual block working conditions
- rail terminology as defined by the Rail Infrastructure Manager safeworking system
- recognition of points, signals and location features
- relevant rail danger zones.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

# TLIC1013 Ride courier/delivery bicycle

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to ride a courier or delivery bicycle while safely carrying loads.

It includes carrying out pre-operational checks of the bicycle; systematically, safely and efficiently controlling all functions; and effectively managing hazardous situations.

Work is generally performed with limited or minimum supervision, with full accountability and responsibility for self in achieving the prescribed outcome.

Work must be carried out in accordance with the regulations/permit requirements of the relevant state/territory roads and traffic authority pertaining to the riding of the bicycle on public roads.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Inspect bicycle for operational capability**
  - 1.1 Work area is checked to ensure operational checks of bicycle may be conducted safely
  - 1.2 Bicycle is checked prior to operation to ensure it is free from damage that may limit operational capability, in accordance with manufacturer safety checks, specifications and workplace procedures
  - 1.3 Component operation is tested in accordance with manufacturer specifications and workplace procedures
  - 1.4 Warning systems are checked for operational effectiveness
  - 1.5 Air pressure and lubrication are checked against specifications
  - 1.6 Appropriate products are used to maintain specified levels as required
  - 1.7 Faults are identified and assessments are made of their potential affect on the operation of the bicycle for the required work, and are reported to appropriate personnel for rectification
  - 1.8 Personal protective equipment is identified, worn and adjusted to meet recommended Australian Standards, legislative, regulatory and policy requirements
- 2 Ride bicycle**
  - 2.1 Road area is checked for hazards prior to and during journey
  - 2.2 Bicycle is steered, manoeuvred, positioned and stopped in accordance with traffic regulations, manufacturer instructions and workplace policy
  - 2.3 Gears are managed to ensure efficiency and performance, and to minimise gear damage and fatigue
  - 2.4 Hazards are identified and/or anticipated and avoided or controlled through defensive riding
  - 2.5 Bicycle is parked and secured in accordance with manufacturer specifications, traffic regulations and workplace procedures
  - 2.6 Bicycle is securely loaded and manoeuvred in accordance with required precautions related to characteristics of the load and/or relevant government regulations pertaining to special loads

- 2.7 Required signs or indicators are fixed to the bicycle
- 3 Monitor traffic and road conditions**
- 3.1 Most efficient route of travel is taken through monitoring and anticipating traffic flows and conditions, road standards and other factors likely to cause delays or route deviations
- 3.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities
- 4 Monitor and maintain bicycle performance**
- 4.1 Performance of bicycle operation is monitored during use
- 4.2 Defective or irregular performance or malfunctions are reported to appropriate authority
- 4.3 Records are maintained/updated and information is processed in accordance with workplace procedures
- 4.4 Clear reference in reports is made to items that may affect future efficient use and/or safety of equipment

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC1013A Ride courier/delivery bicycle.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC1013 Ride courier/delivery bicycle

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- controlling all functions of the courier delivery bicycle
- completing relevant documentation
- monitoring bicycle and equipment performance and taking appropriate action as required
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems that may arise, in accordance with regulatory requirements and workplace procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- bicycle handling procedures
- cycling hazards and related defensive riding techniques
- emergency procedures
- factors that may cause traffic delays and diversions, and related action that can be taken by a courier or delivery cyclist
- map reading and road navigation techniques
- pre-operational checks carried out on bicycle and related action
- procedures and policies identifying, accepting and carrying of dangerous/hazardous goods
- relevant state/territory road traffic authority road rules, regulations, permit and licence

requirements

- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- requirements of courier or delivery work systems/operations and relevant equipment
- workplace operational instructions.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Practical riding aspects must be assessed on a courier or delivery bicycle typical of that used in industry. Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# **TLIC2054 Access rail track to run track vehicle within defined worksite**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to safely access the rail track to run a track vehicle within a defined worksite on a rail network during rail work activities.

It includes accessing defined worksites, running track vehicle within defined worksite and exiting defined worksite.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager safeworking system rules, procedures and protocols for rail safety.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

C – Vehicle Operation

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Access defined worksite**

- 1.1 Authority to enter the defined worksite is confirmed with protection officer
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Appropriate personal protective equipment (PPE) is used in accordance with Rail Infrastructure Manager requirements
- 1.4 Limits of defined worksite and type of track protection provided are identified and confirmed
- 1.5 Communication with protection officer is maintained in accordance with workplace procedures

#### **2 Run track vehicle within defined worksite**

- 2.1 Permission for all rail movements within worksite is obtained from protection officer
- 2.2 Speed limit is observed for type or classification of track vehicle and type of track
- 2.3 Speed limit is varied to meet local conditions
- 2.4 Track vehicle is managed to be able to stop short of any workers or obstruction on track
- 2.5 Unsafe situations and/or emergencies are identified, and appropriate action is taken in accordance with workplace procedures

#### **3 Exit defined worksite**

- 3.1 Protection Officer is notified when clear of the defined worksite
- 3.2 Communications with Network Control Officer is maintained using appropriate communications protocols and systems, in accordance with Rail Infrastructure Manager requirements and workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC2054B Access rail track to run track vehicle within defined worksite.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC2054 Access rail track to run track vehicle within defined worksite

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with individuals and work groups
- explaining appropriate response to identified unsafe situations and/or emergencies
- explaining how to safely access defined worksite
- explaining how to safely exit defined worksite
- following workplace procedures and protocols
- identifying changed conditions
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- observing speed limit appropriate for type of vehicle, type of track and local conditions
- operating under track protection rules
- using required personal protective equipment (PPE) that conforms to Rail Infrastructure Manager requirements.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- operational communications protocols and systems
- points and signals recognition
- Rail Infrastructure Manager and organisational rules, policies, procedures and protocols
- Rail Infrastructure Manager policies, procedures and protocols for identified unsafe situations or emergencies within workplace role
- rail terminology as defined by relevant Rail Infrastructure Manager safeworking system
- safeworking systems and track protection.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIC2058 Travel medium or heavy self-propelled on-track equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to travel a medium or heavy self-propelled track vehicle on a rail network in accordance with the rail network owner policies and procedures.

It includes performing pre-operating checks, obtaining appropriate authority to travel, stabling medium or heavy self-propelled track vehicle, performing post-operational procedures and completing documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines to operate each individual piece of equipment.

This unit involves the application of Rail Infrastructure Manager operational procedures to travel a medium or heavy self-propelled track vehicle, as part of workplace activities across a variety of operational contexts.

Medium or heavy self-propelled track vehicles may include:

- ballast cleaner
- ballast regulator
- dynamic stabiliser
- inserter/remover (TR10)
- rail crane
- rail grinder
- spot tamper
- tamper
- track layer
- track recorder.

Operators will need to have fulfilled licence and certification requirements for the type of equipment being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Perform pre-operational checks

#### 2 Obtain appropriate authority to travel

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Hazards are identified, risks are assessed and control measures are implemented
- 1.2 Detailed pre-operational checks are conducted in accordance with manufacturer specifications and organisational procedures
- 1.3 Logbooks are checked and completed in accordance with organisational requirements and manufacturer specifications
- 1.4 Problems are identified and rectified in accordance with organisational procedures
- 1.5 Identified problems are reported and documented in accordance with organisational procedures
- 2.1 Authority is obtained from appropriate person to travel from siding or on/off tracking location to designated location in accordance with Rail Infrastructure Manager procedures
- 2.2 Communications with Network Control Officer is maintained using appropriate communications protocols and systems, in accordance with Rail Infrastructure

Manager requirements and workplace procedures

2.3 Authority to travel is recorded in accordance with organisational procedures

### **3 Travel vehicle**

3.1 Vehicle is travelled in a safe and efficient manner in accordance with relevant codes of practice, safeworking systems, manufacturer specifications, and organisational and Rail Infrastructure Manager procedures

3.2 Contingencies are responded to appropriately

### **4 Stable medium or heavy self-propelled track vehicle**

4.1 Approval is requested from appropriate person to stable self-propelled track vehicle

4.2 Nominated stabling location and timing is confirmed

4.3 Vehicle is moved to nominated stabling location

4.4 Appropriate person is contacted and informed that vehicle is at nominated location and intact

4.5 Vehicle is stabled as directed and left in appropriate manner to ensure security and protection of vehicle and ancillary equipment

### **5 Perform post-operational procedures**

5.1 Post-operational checks are conducted in accordance with manufacturer specifications and organisational procedures, to identify defects and maintenance requirements

5.2 Identified problems are reported in accordance with organisational procedures

5.3 Post-operational service schedules are conducted in accordance with organisational procedures

### **6 Complete documentation**

6.1 Required documentation procedures and processes are confirmed

6.2 Documentation is filled in legibly and proofread

6.3 Documentation is processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC2058A Travel medium or heavy self-propelled on-track equipment.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC2058 Travel medium or heavy self-propelled on-track equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- applying relevant safeworking and workplace procedures
- communicating effectively with others when travelling medium or heavy self-propelled track vehicles
- following operational instructions
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- reporting and rectifying within limits of own role, identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others when travelling medium or heavy self-propelled track vehicles.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency management plans and procedures
- hazards that may exist when travelling medium or heavy self-propelled track vehicles, and ways of controlling the risks involved
- organisational procedures for travelling medium or heavy self-propelled track vehicles
- problems that may occur when travelling medium or heavy self-propelled track vehicles, and action that can be taken to report or resolve these problems
- Rail Infrastructure Manager rules and regulations applicable to track protection
- relevant rail danger zones

- relevant rail safety work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur on medium or heavy self-propelled on-track equipment in an appropriate range of situations in the workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

# TLIC2059 Propel and operate light on-track equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to propel and operate light on-track equipment as part of workplace activities across a variety of rail operational contexts.

It includes performing pre-operational equipment checks, obtaining approval to place equipment on track, operating light equipment on track and stabling or moving equipment off track.

Light on-track equipment is considered to be less than 10 tonnes that may be lifted on or off track mechanically and may include:

- ballast scarifiers
- dog screw setters/drivers
- joint lifters
- multi-spindle borers
- power track jacks
- profile grinders
- rail-mounted compressors
- small sleeper spacers
- spike drivers
- spike pullers (ride on)
- various fastening applicators.

Light on-track equipment requires a basic operator skill level in manipulation, coordination, alignment and functional activity, with little complexity or variance in overall activity. This typically covers equipment carrying out basic repetitive and alignment type activities.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements, to comply with relevant codes of practice and/or guidelines, and to meet organisational requirements to operate each individual piece of equipment.

Operators will need to have fulfilled licence and/or certification requirements for the type of equipment being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Perform pre-operational equipment checks**

#### **2 Obtain approval to place equipment on track**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Hazards are identified, risks are assessed and control measures are implemented
- 1.2 Detailed pre-operational equipment checks are conducted in accordance with manufacturer specifications and organisational procedures
- 1.3 Logbooks are checked and accurately completed as required, in accordance with organisational requirements and manufacturer specification
- 1.4 Problems with equipment are identified and rectified in accordance with workplace procedures
- 1.5 Identified problems are reported and documented in accordance with organisational procedures
- 2.1 Protection officer or person in charge of work (PICOW) is contacted to obtain approval to place light on-track equipment on track and to move it to designated location in accordance with network owner's procedures
- 2.2 Communications with Network Control Officer is maintained using appropriate communications systems, in accordance with network owner procedures

- 2.3 Approval is recorded in accordance with organisational procedures
- 3 Operate light equipment on track**
- 3.1 Equipment is travelled to designated location in accordance with network owner's procedures
- 3.2 Equipment is prepared for work
- 3.3 Equipment is operated in a safe and efficient manner in accordance with relevant codes of practice, safeworking systems, manufacturer and organisational procedures
- 3.4 Equipment is operated to meet organisational standards and specifications
- 3.5 Warning systems are monitored and appropriately responded to as required during operation
- 4 Stable or off track equipment**
- 4.1 Protection officer or PICOW is contacted to direct where and when to stable or off track equipment
- 4.2 Equipment is propelled to nominated stabling or off-track location
- 4.3 Equipment is stabled or off tracked as directed
- 4.4 Protection officer or PICOW is contacted and informed when light on-track equipment is stabled or off tracked
- 4.5 Equipment is left stored in appropriate manner and location to ensure security and protection of equipment
- 5 Perform post-operational equipment procedures**
- 5.1 Post-operational equipment checks are conducted in accordance with manufacturer specifications and organisational procedures to identify defects and maintenance requirements
- 5.2 Identified problems are reported in accordance with organisational procedures
- 5.3 Post-operating service schedules are conducted in accordance with organisational procedures
- 6 Complete documentation**
- 6.1 Logbooks are checked and completed as required
- 6.2 Documentation is completed and processed in accordance with organisational procedures

# TLIC2074 Couple and uncouple track maintenance vehicles

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to safely couple/uncouple track vehicles in accordance with safeworking and organisational, policies and procedures.

It includes preparing to couple track maintenance vehicles, coupling track maintenance vehicles, and uncoupling and securing track maintenance vehicles.

This unit is intended for all types of track maintenance vehicles required to be coupled and uncoupled as part of operational requirements. Track maintenance vehicles may include:

- overhead wiring maintenance vehicle
- road/rail vehicles
- shunting tractors
- track inspection vehicles
- track machines
- wagon.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Prepare to couple track maintenance vehicles

- 1.1 Coupling instructions are interpreted and confirmed as meeting minimum operating standards
- 1.2 Location of vehicles and required movements are identified
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Communication methods to be used are agreed and confirmed
- 1.5 Vehicle/s to be coupled are secured in accordance with organisational procedures

#### 2 Couple track maintenance vehicles

- 2.1 Setting of route and having correct authority in place is ensured prior to movement of track vehicles
- 2.2 Warning is given before vehicle is moved
- 2.3 Vehicle is moved in a controlled manner to enable safe coupling and prevent damage
- 2.4 Coupling mechanisms are checked to ensure they are correctly engaged
- 2.5 Connecting brake hoses and/or electrical couplings are connected as required, in accordance with organisational procedures and/or manufacturer specifications
- 2.6 Securing devices are released/removed in accordance with organisational procedures

#### 3 Uncouple and secure track maintenance vehicles

- 3.1 Hazards are identified, risks are assessed and control measures are implemented
- 3.2 Vehicles are positioned to meet uncoupling requirements in accordance with organisational procedures
- 3.3 Securing devices are applied/attached in accordance with organisational procedures
- 3.4 Brake hoses and/or electrical couplings are disconnected in accordance with organisational procedures and/or

manufacturer specifications

3.5 Coupling devices are correctly disengaged

3.6 Warning is given before vehicle is moved

3.7 Vehicles are separated in a controlled manner to enable safe uncoupling and prevent damage

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC2074A Couple and uncouple track maintenance vehicles.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIC2074 Couple and uncouple track maintenance vehicles

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking and workplace procedures
- communicating effectively with others
- coupling and uncoupling track maintenance vehicles
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- securing vehicles in accordance with manufacturer specifications, before coupling and after uncoupling has been completed
- using correct communications methods
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications protocols
- operating requirements for coupling and uncoupling track maintenance vehicles
- principles of operation of protective devices, air and electrical couplings, handbrakes, derailleurs and coupling equipment

- relevant manufacturer specifications for coupling and uncoupling of track maintenance vehicles
- relevant rail danger zones
- relevant state/territory legislated work health and safety (WHS)/occupational health and safety (OHS) and rail safety requirements, codes of practice, guidelines and manufacturer specifications.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

# TLIC2075 Drive and monitor medium or heavy self-propelled on-track equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to drive and monitor medium/heavy self-propelled on-track equipment in accordance with safeworking requirements, network owner and/or organisational policies and procedures.

It includes driving and monitoring medium/heavy self-propelled on-track equipment, controlling and monitoring medium/heavy self-propelled on-track equipment, and responding to changed operating factors.

Medium/heavy on-track equipment generally weighs more than 10 tonnes and is permanently railed. Medium/heavy self-propelled track vehicles may include:

- ballast cleaner
- ballast regulator
- dynamic stabiliser
- inserter/remover (TR10)
- rail crane
- rail grinder
- spot tamper
- tamper
- track layer
- track recorder.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with any codes of practice and/or guidelines as they apply to driving and monitoring medium or heavy self-propelled on-track equipment.

This unit does not cover operating medium/heavy self-propelled on-track equipment to complete work activities. This must be covered by individual assessments for the equipment concerned.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Drive and monitor medium/heavy self-propelled on-track equipment**

#### **2 Control and monitor medium/heavy self-propelled on-track equipment**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Authority is obtained from relevant personnel to travel vehicle in accordance with network owner procedures
- 1.2 Vehicle is driven in accordance with manufacturer instructions and organisational procedures
- 1.3 Vehicle handling techniques are applied to eliminate or minimise risk of injury to personnel or damage to equipment
- 1.4 Vehicle is monitored and faults, defects and inefficiencies are identified to maintain optimum running conditions
- 1.5 Appropriate action is taken in response to identified faults, defects and inefficiencies to ensure safe operation of vehicle
- 2.1 Events and circumstances affecting planned running schedule are communicated to relevant personnel in accordance with organisational procedures
- 2.2 Instructions received from relevant personnel are interpreted and applied to ensure safe and effective control of vehicle
- 2.3 Communications are maintained with relevant personnel during train journey in accordance with relevant safeworking systems, network requirements and

organisational procedures

2.4 Instructions concerning vehicle operation are given to relevant personnel to ensure safe and efficient running

### **3 Respond to changed operating factors**

3.1 Temporary signs and/or signals, hand signals and verbal movement commands are interpreted and followed, in accordance with safeworking systems, network owner requirements and organisational procedures

3.2 Hazardous/emergency situations are recognised and appropriate actions are taken in accordance with safeworking systems, network owner requirements and organisational procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIC2075A Drive and monitor medium or heavy self-propelled on-track equipment.

## **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC2075 Drive and monitor medium or heavy self-propelled on-track equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking and organisational procedures
- communicating effectively with others
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring medium or heavy self-propelled on-track equipment in accordance with manufacturer instructions and organisational procedures
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting instructions, procedures and information relevant to vehicle operations
- responding to trackside signs and signals in accordance with safeworking systems and workplace procedures
- using correct communications protocols
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency management plans and procedures

- relevant medium or heavy self-propelled on-track equipment manufacturer specifications and organisational procedures
- relevant rail danger zones and safeworking system
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant sections of state/territory legislated rail safety requirements, codes of practice and guidelines
- use of communications equipment in accordance with operational procedures and rail safeworking systems .

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur on a medium/heavy self-propelled on-track vehicle in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Vehicles may include:

- attached rolling stock
- single medium/heavy self-propelled on-track equipment
- vehicles coupled together.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

## **TLIC2076 Establish and operate braking system on medium/heavy self-propelled on-track equipment**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to establish, test and operate the braking system on a medium or heavy self-propelled on-track maintenance vehicle and to deal with brake system faults and failures.

It includes identifying and establishing track maintenance vehicle braking system; testing, operating and monitoring track maintenance vehicle braking system; and identifying and rectifying track maintenance vehicle braking system faults in transit.

Medium or heavy on-track equipment generally weighs more than 10 tonnes and is permanently railed.

This unit is intended for rail safety workers who will drive medium/heavy self-propelled on-track equipment to ensure the braking system is suitable for operation prior to the on-track equipment being driven and to identify any faults when in transit. Depending on the type of test being used this activity may require the assistance of a second person.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

C – Vehicle Operation

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Identify and establish track maintenance vehicle braking system**

#### **2 Test, operate and monitor track maintenance vehicle braking system**

#### **3 Identify and rectify track maintenance vehicle braking system faults in transit**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Brake system and type to be used are identified

1.2 Hazards are identified, risks are assessed and control measures are implemented

1.3 Correct coupling of vehicle braking system is established and/or confirmed as required in accordance with organisational procedures

1.4 Air brake system is charged to required pressures in accordance with organisational procedures

2.1 Relevant brake system tests are conducted in accordance with organisational procedures

2.2 Vehicle brakes are applied and released under normal operational conditions in accordance with correct handling and organisational procedures

2.3 Vehicle brakes are applied and released under emergency conditions in accordance with correct handling and organisational procedures

2.4 Vehicle brake system is monitored in accordance with organisational and/or operational requirements

3.1 Braking system faults are identified while in transit

3.2 Suitable location to bring vehicle to a stand is identified in accordance with vehicle handling and organisational procedures

3.3 Vehicle brake system fault is located and rectified or isolated in accordance with manufacturer and/or organisational procedures

3.4 Relevant brake system tests are conducted as required, in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC2076A Establish and operate braking system on medium/heavy self-propelled on-track equipment.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC2076 Establish and operate braking system on medium/heavy self-propelled on-track equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- assessing brake system defects
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying possible brake faults that may occur
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in brakes and related equipment in accordance with operating procedures
- operating brake systems when driving on-track vehicle
- reading and interpreting relevant instructions, procedures, information and signs
- reporting identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate state/territory legislated rail safety requirements, rail industry standards, relevant codes of practice and/or guidelines
- brake systems, their components and operation

- manufacturer specifications and workplace procedures for medium/heavy self-propelled on-track equipment
- relevant rail danger zones and safeworking systems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- types of brake system tests and their purpose.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur on medium/heavy self-propelled on-track equipment, in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIC2078 Identify and respond to signals and trackside signs

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to identify, interpret and respond to fixed signals and trackside signs in accordance with network owner and/or organisational policies and procedures.

It includes identifying and responding to running signals, indicators, shunting signals and subsidiary signals; interpreting and responding to trackside signs; and reporting defective or irregular signals or trackside signs.

This unit is suitable for rail safety workers who are required to identify and respond to trackside signals and signs as part of their job role. They may be working within a rail operational or infrastructure environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

**1 Identify and respond to running signals and indicators**

- 1.1 Types and functions of running signal and indicators are identified in accordance with network owner procedures
- 1.2 Indications and aspects displayed by running signals and indicators are identified and interpreted
- 1.3 Hand signals and/or track warning signals are interpreted and followed, in accordance with safeworking systems, network owner requirements and organisational procedures
- 1.4 Rail traffic speed and movement is controlled appropriate to the indication displayed by the running signal or indicator
- 1.5 Illegal or irregular indications or aspects displayed by running signals or indicators are identified and appropriate action is taken

**2 Identify and respond to shunting signals and subsidiary signals**

- 2.1 Types and functions of shunting signals and subsidiary signals are identified in accordance with network owner procedures
- 2.2 Indications displayed by shunting signals and subsidiary signals are identified and interpreted
- 2.3 Rail traffic speed and movement is controlled appropriate to the indication displayed by the shunting signal
- 2.4 Illegal or irregular indications displayed by shunting signals are identified and appropriate action is taken

**3 Interpret and respond to trackside signs**

- 3.1 Permanent trackside signs are interpreted and followed, in accordance with safeworking systems, network owner requirements and organisational procedures
- 3.2 Temporary trackside signs are interpreted and followed, in accordance with safeworking systems, network owner requirements and organisational procedures

**4 Respond to and report defective or irregular signals or trackside signs**

- 4.1 Defective or irregular signals and trackside signs are responded to in accordance with safeworking systems, network owner requirements and organisational procedures
- 4.2 Defective or irregular signals and trackside signs are reported and recorded in accordance with safeworking systems, network owner requirements and organisational

procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC2078A Identify and respond to signals and trackside signs.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIC2078 Identify and respond to signals and trackside signs

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others
- completing required documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures and information (including numerical information)
- responding to different indications and aspects displayed by fixed signals in rail networks
- responding to different trackside signs in rail networks
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant sections of applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines

- signalling system for each network
- types of fixed signals used in rail networks
- types of trackside signs used in rail networks
- use of communications equipment
- workplace procedure for responding to illegal or irregular indications displayed by running signals or shunting signals.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, safeworking system, regulations, codes of practice and operation manuals.

## **TLIC2080 Start up, shut down and stable medium/heavy self-propelled on-track equipment**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to start up, prepare, shut down and stable a medium/heavy self-propelled on-track vehicle on a rail network in accordance with network owner policies and procedures.

It includes inspecting and preparing track vehicle, starting up track vehicle, conducting in-cab check, stabling medium heavy self-propelled track vehicle, shutting down track vehicle and performing post operational procedures.

Medium or heavy on-track equipment generally weighs more than 10 tonnes and is permanently railed.

Medium or heavy self-propelled on-track vehicles may include:

- ballast cleaner
- ballast regulator
- dynamic stabiliser
- inserter/remover (TR10)
- rail crane
- rail grinder
- spot tamper
- tamper
- track layer
- track recorder.

This unit is suitable for rail safety workers required to start up and prepare a medium/heavy self-propelled on-track vehicle prior to leaving a stabling location. It also covers stabling a medium/heavy self-propelled track vehicle, including shutting the vehicle down and securing it.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Inspect and prepare track vehicle**

#### **2 Start up track vehicle**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Identification and location of track vehicle is confirmed
- 1.2 Logbook and track vehicle are checked for out of service indications and to confirm serviceability and logbook is completed accurately in accordance with organisational requirements or manufacturer specification
- 1.3 Track vehicle kit and equipment are checked and defects and deficiencies are recorded and rectified, isolated, tagged or reported in accordance with organisational procedures, as applicable
- 1.4 Consumables are checked and replenished as required
- 1.5 External visual checks are conducted in accordance with manufacturer and/or organisational procedures
- 1.6 Problems are identified and rectified in accordance with organisational procedures
- 1.7 Identified problems are reported and/or documented in accordance with organisational procedures
- 2.1 Track vehicle is started in accordance with manufacturer instructions and/or organisational procedures
- 2.2 Operating faults are identified, diagnosed, rectified and/or reported and recorded in accordance with organisational

procedures

2.3 Appropriate instruments and gauges are observed and readings are interpreted to confirm effective operation in accordance with manufacturer and/or organisational procedures

2.4 Fluid levels are rechecked after starting and appropriate action is taken as required

### **3 Conduct in-cab checks**

3.1 Track vehicle in-cab checks are conducted in accordance with manufacturer and/or organisational procedures

3.2 Driver safety systems are checked to ensure they are functioning correctly and appropriate action is taken if they are not

3.3 Communications equipment is checked to ensure it is functioning correctly and appropriate action is taken if it is not

3.4 Auxiliary and emergency equipment is checked and confirmed to be operational in accordance with operating requirements

3.5 Documentation concerning inspecting track vehicle is completed and processed as required in accordance with organisational procedures

### **4 Stable medium/heavy self-propelled track vehicle**

4.1 Approval is requested from appropriate person to direct when and where to stable self-propelled track vehicle

4.2 Track vehicle is moved to nominated stabling location

4.3 Appropriate person is contacted and informed that track vehicle is at nominated location and intact

4.4 Track vehicle is stabled as directed

4.5 Track vehicle is left in appropriate manner to ensure security and protection of vehicle and ancillary equipment

### **5 Shut down track vehicle**

5.1 Track vehicle is shut down in accordance with manufacturer and/or organisational procedures

5.2 Track vehicle is secured in accordance with organisational procedures

5.3 Control/isolation equipment and cab are secured in accordance with organisational procedures

## **6 Perform post-operational procedures**

- 6.1 Post-operational checks are conducted in accordance with manufacturer specifications and/or organisational procedures to identify defects and maintenance requirements
- 6.2 Identified problems are reported in accordance with organisational procedures
- 6.3 Post-operating service schedules are conducted in accordance with organisational procedures
- 6.4 Documentation is completed and processed as required, in accordance with organisational procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIC2080A Start up, shut down and stable medium/heavy self-propelled on-track equipment.

## **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC2080 Start up, shut down and stable medium/heavy self-propelled on-track equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- applying relevant workplace procedures
- communicating effectively with others
- following operational instructions
- identifying correct shut-down procedures in accordance with manufacturer instructions and workplace procedures
- identifying correct start-up procedures in accordance with manufacturer instructions and workplace procedures
- modifying activities depending on operational contingencies, risk situations and environments
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- securing vehicles in accordance with manufacturer instructions and workplace procedures, when stabling on-track equipment
- working collaboratively with others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency management plans and procedures
- hazards that may exist during start up and shut down of medium/heavy self-propelled track vehicles and ways of controlling the risks involved
- network owner rules and regulations applicable to starting up, shutting down and stabling medium/heavy self-propelled on-track equipment
- organisational procedures for starting up and shutting down medium/heavy self-propelled

on-track equipment

- problems that may occur when preparing and stabling medium/heavy self-propelled on-track equipment and action that can be taken to report or resolve these problems
- relevant documentation concerning inspecting on-track equipment
- relevant manufacturer specifications and workplace procedures for medium/heavy self-propelled on-track equipment
- relevant rail danger zones and safeworking systems
- relevant rail safety work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur on medium/heavy self-propelled on-track equipment, in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice, manufacturer specifications and operation manuals.

# TLIC2081 Pilot rail traffic within work on track authority limits

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to pilot rail traffic within Work On Track Authority limits, in accordance with Rail Infrastructure Manager, legislative and regulatory requirements. It includes entering and exiting work on track authority limits.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS                      PERFORMANCE CRITERIA

Elements describe the      Performance criteria describe the performance needed to demonstrate

essential outcomes.

achievement of the element.

### **1 Enter Work On Track Authority limits**

- 1.1 Protection officers /possession protection officers are informed that rail traffic has arrived at the Work On Track Authority limits and confirmation that it is safe to enter is sought and obtained
- 1.2 Communication with Network Control Officer is maintained using appropriate communications systems, in accordance with Rail Infrastructure Manager requirements and workplace procedures
- 1.3 Permission to enter Work On Track Authority limits is documented in accordance with Rail Infrastructure Manager and/or organisational requirements
- 1.4 Authority to enter track protection is provided to rail traffic driver
- 1.5 Hazards are identified, risks are assessed and control measures are implemented
- 1.6 Rail traffic is piloted into the Work On Track Authority limit
- 1.7 Advice regarding operating restrictions and conditions is given to rail traffic crew

### **2 Exit Work On Track Authority limits**

- 2.1 Rail traffic is piloted to limit of the Work On Track Authority limits
- 2.2 Permission is obtained from Network Control Officer for rail traffic to exit Work On Track Authority limits
- 2.3 Advice regarding operating restrictions and conditions is given to rail traffic crew

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC2081A Pilot rail traffic within work on track authority limits.

# Assessment Requirements for TLIC2081 Pilot rail traffic within work on track authority limits

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying safeworking procedures
- communicating effectively with individuals and work groups
- explaining procedures for granting permission for rail traffic to enter Work On Track Authority limit
- following safeworking workplace policies, procedures, rules and protocols
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying unsafe situations and emergencies.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Rail Infrastructure Manager safeworking system policies, procedures, rules and protocols
- Rail Infrastructure Manager emergency management procedures and protocols for identified unsafe situations or emergencies
- rail terminology as defined by the relevant Rail Infrastructure Manager system
- worksite protection plan.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include

requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

## **TLIC3003 Drive medium rigid vehicle**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to drive a medium rigid vehicle safely in accordance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to medium rigid vehicles.

It includes systematically and efficiently controlling vehicle functions, monitoring traffic and road conditions, managing vehicle condition and performance, and effectively managing hazardous situations.

Types of vehicles include all medium rigid vehicles, for example any 2-axle rigid vehicle, including trucks and buses greater than 8 tonnes gross vehicle mass (GVM).

Driving is performed with limited or minimum supervision, within duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

C – Vehicle Operation

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Drive medium rigid vehicle**

- 1.1 Medium rigid vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturer instructions
- 1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage
- 1.3 Engine operation is maintained within manufacturer specified torque range and temperature, through effective transmission use
- 1.4 Braking system of medium rigid vehicle is managed and operated to ensure effective control of vehicle under all conditions
- 1.5 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving
- 1.6 Medium rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning
- 1.7 Medium rigid vehicle is parked, shut down and secured in accordance with manufacturer specifications, traffic regulations and workplace procedures
- 1.8 Appropriate procedures are followed in a driving emergency

### **2 Monitor traffic and road conditions**

- 2.1 Most efficient travel route is taken through monitoring and anticipating traffic flows and conditions, road standards and other factors likely to cause delays or route deviations
- 2.2 Traffic and road conditions are constantly monitored and acted on to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities

### **3 Monitor and maintain vehicle performance**

- 3.1 Vehicle performance is maintained through pre-operational vehicle inspections and checks
- 3.2 Performance and efficiency of vehicle operation is monitored during use
- 3.3 Defective or irregular performance or malfunctions are reported to appropriate authority
- 3.4 Vehicle records are maintained/updated and information is

processed in accordance with workplace procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIC3003A Drive medium rigid vehicle.

## **Links**

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC3003 Drive medium rigid vehicle

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- carrying out pre-operational checks
- checking and replenishing fluids and carry out lubrication processes
- completing relevant documentation
- monitoring and anticipating traffic hazards and taking appropriate action
- monitoring equipment performance
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes and effects of fatigue on drivers
- differences between transmission types
- driving hazards and related defensive driving techniques
- efficient driving techniques
- engine power management and safe driving strategies
- factors that increase fatigue-related accidents
- factors that may cause traffic delays and diversions, and related action that can be taken by a driver
- fatigue management strategies including on-road techniques

- lifestyles that promote effective long-term management of fatigue
- map reading and road navigation techniques including the use of a global positioning system (GPS) device
- medium rigid vehicle controls, instruments and indicators, and their use
- medium rigid vehicle handling procedures
- pre-operational checks carried out on vehicle and related action
- principles of operation of air brakes and procedures for their use
- principles of stress management when driving a vehicle
- procedures to be followed in a driving emergency
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant state/territory road traffic authority road rules, regulations, permit and licence requirements
- workplace driving and operational instructions.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment of this unit may be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory road traffic authority.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIC3011 Transport passengers with disabilities

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to operate vehicles used for the transport of people who have a disability, in accordance with relevant state/territory road and traffic authority licence requirements and regulations.

It includes undertaking pre-operational vehicle checks and vehicle ancillary equipment; assisting passengers to use restraints and ancillary equipment; providing appropriate support to passengers during their journey; and manoeuvring the vehicle with due consideration of passengers' disabilities and the requirements of relevant government regulations.

Work is performed with limited or minimum supervision, and within duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

## Elements and Performance Criteria

Elements describe the                      Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

**1 Carry out pre-operational checks on vehicles**

1.1 Pre-operational checks for vehicle and its associated ancillary equipment are carried out in accordance with manufacturer requirements, government regulations and workplace policies and procedures

1.2 Hazards are identified, risks are assessed and control measures are implemented

1.3 Faults and defects identified during checks are repaired and/or reported in accordance with workplace procedures

**2 Drive a vehicle used by passengers who have a disability**

2.1 Passengers are assisted in a courteous manner, sensitive to the specific needs of their disability

2.2 Passengers are assisted to use restraints and ancillary equipment that accompanies them as required

2.3 Ongoing support is provided to passengers to maximise their travelling comfort

2.4 Ancillary equipment is stowed safely in vehicle in accordance with relevant regulations

2.5 Vehicle is manoeuvred in accordance with the regulations for the class of vehicle involved

2.6 Vehicle is manoeuvred with due consideration to required precautions related to the disability of the passenger in accordance with relevant government regulations pertaining to the special load

2.7 Signs or indicators are fixed to vehicle as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIC3011A Transport passengers with disabilities.

## **Links**

# Assessment Requirements for TLIC3011 Transport passengers with disabilities

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- controlling all functions of the vehicle
- interacting appropriately with passengers who have a disability
- reading, interpreting and following relevant instructions, procedures, information and signs
- responding appropriately to cultural requirements when interacting with others
- working collaboratively with others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- duty of care responsibilities when driving vehicles used by passengers who have a disability
- pre-operational checks carried out on vehicle, and ancillary equipment and related action
- procedures for operating ancillary equipment
- relevant anti-discrimination legislation
- relevant state/territory road traffic authority road rules, regulations and licence requirements of the relevant
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations

- techniques for driving vehicles used by passengers who have a disability
- vehicle and ancillary equipment controls, instruments and indicators, and their use
- vehicle handling procedures
- workplace driving and operational instructions.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Practical driving aspects must be assessed in a vehicle designed to transport passengers who have a disability.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## **TLIC3017 Shunt rolling stock**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to safely shunt rolling stock in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes controlling and directing the physical movement of rolling stock and operating relevant equipment to carry out planned shunting strategy.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures when carrying out shunting activities as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

C – Vehicle Operation

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Plan and prepare for shunting operation

- 1.1 Shunting requirements are interpreted and clarified, and vehicles and equipment are obtained and prepared in accordance with shunting strategy
- 1.2 Rolling stock movements, availability and locations are established to determine appropriate siding and/or track locations for vehicle placement
- 1.3 Relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, codes of practice, organisational policies and procedures, and safeworking systems and requirements related to shunting are identified

#### 2 Carry out shunting control procedures

- 2.1 Points, levers, switches, signals and line of sight communications are used to assist the control of rolling stock movement
- 2.2 Uniform hand signals, light and radio shunting commands that conform with operational rules and statutory requirements are used
- 2.3 Relevant WHS/OHS requirements are followed to prevent injury and damage
- 2.4 Wagon cards are checked and wagons are obtained and sorted to comply with shunting requirements
- 2.5 Shunting control techniques are applied to prevent damage of rolling stock and loads/contents

#### 3 Shunt rolling stock

- 3.1 Workplace procedures for shunting are identified and applied
- 3.2 Rolling stock is positioned to meet shunting requirements
- 3.3 Coupling systems are identified and applied to attach and detach rolling stock
- 3.4 Connecting brake hoses, electrical couplings and hand brakes are connected/disconnected and applied/released in accordance with operational and WHS/OHS requirements
- 3.5 Rolling stock is shunted with the minimum of necessary moves within governing safety requirements and limitations

- 4 Finalise train consist**
- 4.1 Train consists are made up in accordance with operational procedures and timetabling requirements
  - 4.2 Irregularities and defects with rolling stock equipment are reported in accordance with operational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC3017A Shunt rolling stock.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIC3017 Shunt rolling stock

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- checking draw gear, vehicle and equipment in terms of service schedule and operating procedures
- communicating effectively with others
- completing relevant documentation
- displaying and correctly interpreting hand, light and radio signals in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritise work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring condition and performance of equipment and taking appropriate action as required
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- characteristics and features of wagons and other rolling stock
- defects that can occur on a shunting gear and equipment and related action that should be taken
- draw gear capacities and related operating procedures
- emergency procedures
- loading and unloading procedures
- location and operation of signals and points
- principles of operation of protective devices, air brakes, handbrakes, derailleurs
- procedures for coupling and uncoupling rolling stock
- procedures for identifying and reporting hazards
- procedures for operating points and signals
- radio communications protocol
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations including codes of practice
- safeworking systems and rule requirements
- shunting plan and instructions
- shunting signals and commands and line of sight communications systems
- track and signal layouts and features in yard.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations

- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, rules, regulations, Australian Dangerous Goods (ADG) Code, codes of practice and operation manuals.

## Links

Companion Volume implementation guides are found in VETNet -

# TLIC3018 Operate on-train remote control system

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to operate an on-train remote control system in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes positioning equipment and motive power units, operating the system and shutting it down after operation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment.

On-train remote control equipment is any mechanism and operating system that allows the control of one motive power unit, which is part of a train, from another unit that is part of the same train.

It involves the application of routine operational principles and procedures when operating the on-train remote control system, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Position equipment and motive power unit/s**

- 1.1 Remote control equipment and motive power units are positioned in required locations
- 1.2 Brake test is conducted on each train section with assistance from appropriate personnel
- 1.3 Front and rear train consists are coupled together to form one train, in accordance with safeworking techniques
- 1.4 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are followed to prevent injury and damage
- 1.5 Relevant codes of practice, and safeworking systems and requirements are followed

#### **2 Monitor and operate remote control equipment**

- 2.1 Motive power units and control system set-up are checked to ensure safe operational status
- 2.2 Remote control equipment is operated and monitored in accordance with operational requirements during train movements to provide safe train handling and control
- 2.3 Operational difficulties encountered are addressed by re-establishing control of the motive power unit/s with minimum risk to personnel and equipment

#### **3 Shut down remote control equipment**

- 3.1 Shut-down procedures of lead and remote control equipment are followed to ensure train security and de-activation of the system
- 3.2 Equipment indicators or functions are operated to ensure shut-down process is correct and complete

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC3018A Operate on-train remote control system.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC3018 Operate on-train remote control system

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of equipment and taking appropriate action as required
- monitoring train speeds and movements and taking appropriate action as required
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- shutting down remote control system in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- braking and safety system procedures
- motive power operating techniques
- on-train remote control unit controls, instruments and indicators, and their purpose, location and use
- operational instructions
- positioning procedures
- possible operating difficulties that may occur during the operation using remote control
- procedures for controlling motive power units
- procedures for identifying equipment defects in remote control units and assessing for appropriate action including compatible coupling, braking and drive equipment, ancillary systems and signalling systems
- procedures for managing hazardous situations involving online remote control systems
- procedures for operating remote control units
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- shut-down workplace procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

## **TLIC3027 Stable a motive power unit**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to stable a motive power unit in accordance with relevant workplace procedures, rail regulations and codes of practice.

It includes determining the required stabling location, shunting and securing the train, stabling and securing the motive power unit, carrying out all required post-operational checks and completing post-operational paperwork.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment. It involves the application of routine operational principles and procedures when stabling and securing a motive power unit, across a variety of operational contexts in the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

C – Vehicle Operation

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Determine stabling location

#### 2 Stable motive power unit

#### 3 Carry out post-operational checks

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Contact is made with appropriate personnel to determine planned location for stabling train and/or motive power unit

1.2 Location is identified and confirmed with appropriate personnel

1.3 Directions from appropriate personnel are interpreted and followed

2.1 Train is shunted and secured to prevent roll away in accordance with directions and workplace procedures

2.2 Motive power unit is stabled as directed

2.3 Motive power unit is secured to prevent roll away, in accordance with directions and workplace procedures

2.4 Motive power unit is shut down in accordance with manufacturer instructions and workplace procedures

2.5 Cab is secured in accordance with workplace procedures

2.6 Derailers are set in place in accordance with workplace procedures as required

3.1 Fuel and fluid levels are checked and required action is taken to replenish consumables

3.2 Inspection is made of motive power unit in accordance with workplace procedures

3.3 Identified faults and defects are fixed and/or reported and recorded in accordance with workplace procedures

3.4 Faulty and defective equipment that presents a safety risk is isolated and tagged in accordance with workplace procedures and rail regulations

3.5 Outcomes of post-operational checks are recorded in accordance with workplace procedures

3.6 Equipment is returned and stowed in accordance with workplace requirements

- 3.7 Required safeworking and post-operational documentation is completed in accordance with workplace procedures and rail regulations

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC3027A Stable a motive power unit.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIC3027 Stable a motive power unit

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in motive power units and associated equipment and procedures
- carrying out post-operational checks on a range of motive power units in accordance with workplace procedures
- communicating effectively with others
- conducting a visual inspection of a motive power unit
- documenting outcomes of motive power unit inspection
- identifying and assessing motive power unit defects and deficiencies and taking appropriate action to report, isolate, repair or replace identified defective equipment in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures and information
- recognising problems that may arise when stabling a motive power unit and taking appropriate action.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- braking and safety system procedures
- emergency procedures
- motive power unit controls, instruments and indicators, and their purpose, location and use
- operating controls to start, accelerate, decelerate and stop a motive power unit
- procedure for completing relevant documentation when stabling a motive power unit
- procedures and required protocol for operating electronic communications equipment
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing hazardous situations when operating and stabling a motive power unit
- procedures for minor maintenance, cleaning, lubricating and servicing a motive power unit
- procedures for operating and shutting down auxiliary systems
- procedures for securing a motive power unit to prevent roll away
- procedures for stabling a motive power unit
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- relevant sections of applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- relevant workplace procedures and operating requirements
- speed and load limit compliance requirements
- typical defects that can occur on a motive power unit and related action that should be taken.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

# TLIC3028 Operate and monitor a heritage motive power unit

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to operate and monitor a heritage motive power unit in accordance with relevant workplace procedures, rail regulations and codes of practice.

It includes operating the controls of a heritage motive power unit, monitoring its performance and maintaining its operational condition during a journey. It also includes working collaboratively with other train crew and relevant personnel.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when maintaining the safety and operation of a heritage motive power unit across a variety of operational contexts in the Australian heritage rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Operate heritage motive power unit**

1.1 Motive power unit handling techniques, and track and road knowledge are applied to eliminate or minimise risk of injury to personnel or damage to equipment, rolling stock and load

1.2 Acceleration and braking techniques are applied safely within track, road and weather conditions

1.3 Heritage motive power unit and rolling stock movement between sections is monitored and vehicles are positioned safely in accordance with relevant codes of practice, safeworking systems and related requirements

#### **2 Operate and monitor on-board equipment**

2.1 Motive power unit equipment is monitored and operated to maintain optimum running conditions and to identify faults, defects and deficiencies

2.2 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of motive power unit, including communications with operations controller as required

2.3 Faults, defects and deficiencies are assessed to determine risk of damage to equipment or injury to personnel

#### **3 Respond effectively to external operating factors**

3.1 Instructions are verified, as required, interpreted and followed, in accordance with relevant codes of practice, rail regulatory requirements and organisational policies and procedures, to ensure actions taken are appropriate and safe

3.2 Fixed and hand signals, and verbal movement commands are interpreted and followed, in accordance with relevant codes of practice, safeworking systems and organisational policies and procedures, to ensure actions taken are appropriate and safe

3.3 Hazardous situations are recognised and interpreted, and appropriate initiatives and action are taken to minimise risk to personnel and equipment, in accordance with workplace procedures and applicable regulatory requirements

#### **4 Work collaboratively**

4.1 Safe operation and monitoring of motive power unit is maintained in collaboration with other train crew, network control officers and relevant personnel in accordance with workplace requirements and rail resource management

principles

- 4.2 Potential or actual conflicts or grievances with other train crew, network control officers or relevant personnel when operating a motive power unit are recognised and resolved, in accordance with workplace procedures and rail resource management principles
- 4.3 Regular communication is maintained with train crew, network control officers, drivers of other trains and relevant personnel when operating a motive power unit in accordance with workplace procedures and regulatory requirements
- 4.4 Train crew, network control officers, drivers of other trains and relevant personnel are advised of operational problems, delays, safety incidents and emergency situations
- 4.5 Information provided by train crew, network control officers, drivers of other trains and relevant personnel about the ongoing operation of the motive power unit is interpreted and applied to driving activities in accordance with workplace procedures and applicable regulatory requirements

## **5 Follow all applicable rail regulatory requirements**

- 5.1 Rail regulatory requirements applicable to operating a motive power unit, and the train and track or road concerned, are accessed, clarified as required and interpreted
- 5.2 Relevant rail regulatory requirements are applied and followed when operating a motive power unit
- 5.3 Rail resource management principles are applied in all rail operations involving a motive power unit in accordance with workplace procedures and applicable rail regulatory requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC3028A Operate and monitor a heritage motive power unit.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC3028 Operate and monitor a heritage motive power unit

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in heritage motive power units and associated equipment and procedures
- communicating effectively with other train crews and relevant personnel
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring heritage motive power unit performance
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- recognising problems that may arise when operating and monitoring a heritage motive power unit and taking appropriate action
- selecting and using required personal protective equipment conforming to rail industry and work health and safety (WHS)/occupational health and safety (OHS) standards.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines, and local rail regulations as they relate to heritage railway operations
- braking and safety system procedures
- emergency procedures
- heritage motive power unit controls, instruments and indicators, and their purpose, location and use
- heritage motive power unit monitoring devices, braking and drive equipment, ancillary systems and signalling systems
- operating controls to start, accelerate, decelerate and stop a heritage motive power unit
- procedures and required protocol for operating electronic communications equipment
- procedures for adjusting controls to maximise efficient and safe running
- procedures for checking battery and fluid levels and/or lubrication of a heritage motive power unit, in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and workplace procedures
- procedures for identifying equipment defects and assessing them for appropriate action
- procedures for managing safety incidents and hazardous situations that may arise when operating and monitoring a heritage motive power unit
- procedures for minor maintenance, cleaning, lubricating and servicing of a heritage motive power unit
- procedures for operating and monitoring a heritage motive power unit
- procedures for operating and monitoring ancillary equipment on a heritage motive power unit
- relevant safety, WHS/OHS, and environmental procedures and regulations
- requirements for completing relevant documentation during and after operating and monitoring a heritage motive power unit
- speed and load limits for a heritage motive power unit
- track/bridge limitations, speed limitations, gauge limitations, curves and gradients, curfews, location of signals and crossings, emergency crossovers and operation of a turntable
- typical faults that can occur on a heritage motive power unit and related action that should be taken when repairing, isolating, replacing, reporting and recording faulty equipment
- workplace procedures and operating requirements.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

## **TLIC3029 Stable a heritage motive power unit**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to stable a motive power unit in accordance with relevant workplace procedures, rail regulations and codes of practice.

It includes determining the required stabling location, shunting and securing a motive power unit, carrying out all required post-operational checks and completing post-operational paperwork.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures when stabling and securing a motive power unit across a variety of operational contexts in the Australian heritage rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

C – Vehicle Operation

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Determine stabling location

#### 2 Stable heritage motive power unit

#### 3 Carry out post-operational checks

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Contact is made with network control officer and yard staff to determine planned location for stabling a motive power unit

1.2 Directions of network control officer and yard staff are interpreted and followed

1.3 Care is taken to keep clear of other roads

2.1 Hazards are identified, risks are assessed and risk control measures are implemented

2.2 Train is shunted and secured in accordance with directions, workplace procedures and rail regulations

2.3 Motive power unit is stabled as directed

2.4 Derailers are set in place in accordance with workplace procedures and rail regulations

2.5 Handbrakes are applied

2.6 Power brakes are applied

2.7 Motive power unit is shut down in accordance with manufacturer instructions and workplace procedures

2.8 Cab is secured in accordance with workplace procedures

3.1 Fuel and fluid levels are checked and required action is taken to replenish them

3.2 Inspection is made of motive power unit in accordance with workplace procedures

3.3 Identified faults and defects are fixed or reported and recorded in accordance with workplace procedures

3.4 Faulty and defective equipment that presents a safety risk is isolated and tagged in accordance with workplace procedures and rail regulations

3.5 Outcomes of post-operational checks are recorded in

accordance with workplace procedures

#### **4 Complete post-operational paperwork**

- 4.1 Required safeworking documentation is completed in accordance with workplace procedures and rail regulations
- 4.2 Equipment is returned and stowed in accordance with workplace requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIC3029A Stable a heritage motive power unit.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC3029 Stable a heritage motive power unit

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in heritage motive power units and associated equipment and procedures
- checking and replenishing fluids and carrying out lubrication requirements on a heritage motive power unit
- communicating effectively with others
- conducting a visual inspection of a heritage motive power unit
- documenting outcomes of inspecting a heritage motive power unit
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating controls to start, accelerate, decelerate and stop a heritage motive power unit
- reading and interpreting relevant instructions, procedures and information
- recognising problems that may arise when stabling a heritage motive power unit and taking appropriate action
- working collaboratively with others as part of a train crew.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines

- braking and safety system procedures
- emergency procedures
- heritage motive power unit controls, instruments and indicators, and their purpose, location and use
- procedure for completing relevant documentation
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing hazardous situations when operating and stabling a heritage motive power unit
- procedures for minor maintenance, cleaning, lubricating and servicing a heritage motive power unit
- procedures for operating and shutting down auxiliary systems
- procedures for stabling a heritage motive power unit
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- speed and load limit compliance requirements
- typical defects that can occur on a heritage motive power unit and related action that should be taken.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIC3030 Operate and monitor a heritage steam locomotive

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to operate and monitor a heritage steam locomotive in accordance with relevant workplace procedures, rail regulations and codes of practice.

It includes operating heritage steam locomotive controls, monitoring its performance and maintaining its operational condition during a journey. It also includes working collaboratively with other train crew and relevant personnel.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when maintaining the safety and operation of a heritage steam locomotive, across a variety of operational contexts in the Australian heritage rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Operate heritage steam locomotive**

1.1 Steam locomotive handling techniques, and track and road knowledge are interpreted and applied to eliminate or minimise risk of injury to personnel or damage to equipment, rolling stock and load

1.2 Acceleration and braking techniques are applied safely within track, road and weather conditions

1.3 Steam locomotive and rolling stock movement between sections is monitored and vehicles are positioned safely in accordance with relevant codes of practice, safeworking systems and related requirements

#### **2 Operate and monitor on-board equipment**

2.1 Steam locomotive equipment is monitored and operated to maintain optimum running conditions and to identify faults, defects and deficiencies

2.2 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of steam locomotive, including communications with operations controller as required

2.3 Faults, defects and deficiencies are assessed to determine risk of damage to equipment or injury to personnel

#### **3 Respond effectively to external operating factors**

3.1 Instructions are verified, as required, interpreted and followed, in accordance with relevant codes of practice, rail regulatory requirements and organisational policies and procedures, to ensure actions taken are appropriate and safe

3.2 Fixed and hand signals, and verbal movement commands are interpreted and followed, in accordance with relevant rail regulations, codes of practice and workplace policies and procedures, to ensure actions taken are appropriate and safe

3.3 Hazardous situations are recognised and interpreted, and appropriate initiatives and action are taken to minimise risk to personnel and equipment, in accordance with workplace procedures and applicable regulatory requirements

#### **4 Work collaboratively**

4.1 Safe operation and monitoring of steam locomotive is maintained in collaboration with train crew, Network Control Officer and relevant personnel in accordance with workplace

requirements and rail resource management principles

- 4.2 Potential or actual conflicts or grievances with other train crew, Network Control Officer and relevant personnel when operating a steam locomotive are recognised and resolved, in accordance with workplace procedures and rail resource management principles
- 4.3 Regular communication is maintained with train crew, Network Control Officer, drivers of other trains and relevant personnel when operating a steam locomotive in accordance with workplace procedures and regulatory requirements
- 4.4 Train crew, Network Control Officer, drivers of other trains and relevant personnel are advised of operational problems, delays, safety incidents and emergency situations
- 4.5 Information provided by train crew, Network Control Officer, drivers of other trains and other relevant personnel about the ongoing operation of steam locomotive is interpreted and applied to driving activities in accordance with workplace procedures and applicable regulatory requirements

## **5 Follow all applicable rail regulatory requirements**

- 5.1 Rail regulatory requirements applicable to operating a steam locomotive and the train and track or road concerned, are accessed, clarified as required and interpreted
- 5.2 Relevant rail regulatory requirements are applied and followed when operating a steam locomotive
- 5.3 Rail resource management principles are applied in all rail operations involving a steam locomotive in accordance with workplace procedures and applicable rail regulatory requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC3030A Operate and monitor a heritage steam locomotive.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC3030 Operate and monitor a heritage steam locomotive

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in heritage steam locomotives and associated equipment and procedures
- checking and replenishing fluids and carrying out lubrication processes on a heritage steam locomotive
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring heritage steam locomotive performance
- reading and interpreting relevant instructions, procedures, information and signs relevant
- recognising problems that may arise when operating and monitoring a heritage steam locomotive and taking appropriate action
- working collaboratively with others as part of a train crew.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines and local rail regulations
- braking and safety system procedures
- emergency procedures
- heritage steam locomotive controls, instruments and indicators and their purpose, location and use
- operating controls to start, accelerate, decelerate and stop a heritage steam locomotive
- procedures for adjusting controls to maximise efficient and safe running
- procedures for identifying equipment defects and assessing them for appropriate action
- procedures for managing safety incidents and hazardous situations that may arise when operating and monitoring heritage steam locomotive performance
- procedures for minor maintenance, cleaning, lubricating and servicing a heritage steam locomotive
- procedures for operating and monitoring the performance of ancillary equipment on a heritage steam locomotive
- procedures for operating and monitoring a heritage steam locomotive
- rail resource management principles as they apply to operating and monitoring heritage steam locomotive performance
- relevant rail danger zones
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- relevant workplace procedures and operating requirements
- requirements for communicating and working collaboratively with train crew, Network Control Officer and other relevant personnel
- requirements for completing relevant documentation when operating and monitoring steam locomotive performance
- speed and load limits for a heritage steam locomotive
- steam engine operation principles, monitoring devices, braking equipment, ancillary systems and signalling systems
- track and bridge limitations, speed limitations, gauge limitations, curves and gradients, curfews, location of signals and crossings, emergency crossovers and operation of a turntable
- train schedules, heritage steam locomotive allocation and operational instructions
- typical faults that can occur on a heritage steam locomotive and related action that should be taken when repairing, isolating, replacing, reporting and recording faulty equipment.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include

requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## Links

Companion Volume implementation guides are found in VETNet -

## **TLIC3031 Stable a heritage steam locomotive**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to stable a heritage steam locomotive in accordance with relevant workplace procedures, rail regulations and codes of practice.

It includes determining the required stabling location, shunting and securing train, stabling and securing a heritage steam locomotive, carrying out all required post-operational checks and completing post-operational paperwork.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when stabling and securing a heritage steam locomotive across a variety of operational contexts in the Australian heritage rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

C – Vehicle Operation

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Determine stabling location**

1.1 Contact is made with Network Control Officer and yard staff to determine planned location for stabling a steam locomotive

1.2 Directions of Network Control Officer and yard staff are interpreted and followed

1.3 Care is taken to keep clear of other roads

#### **2 Stable and shut down heritage steam locomotive**

2.1 Hazards are identified, risks are assessed and risk control measures are implemented

2.2 Carriages or vehicles are shunted and secured in accordance with directions, workplace procedures and rail regulations

2.3 Steam locomotive is stabled in correct location as directed

2.4 Derailers are set in place in accordance with workplace procedures and rail regulations

2.5 Handbrakes are applied

2.6 Park brakes are secured

2.7 Steam locomotive is stabled in accordance with operator instructions and workplace procedures

2.8 Cab is secured in accordance with workplace procedures

#### **3 Carry out post-operational checks**

3.1 Fluid and fuel levels are checked and any required action is taken to top up levels

3.2 Visual check is made of steam locomotive in accordance with workplace procedures

3.3 Identified faults and defects are fixed or reported and recorded in accordance with workplace procedures

3.4 Faulty and defective equipment that presents a safety risk is isolated and tagged in accordance with workplace procedures and rail regulations

3.5 Outcomes of post-operational checks are recorded in accordance with workplace procedures

#### **4 Complete post-operational paperwork**

4.1 Timesheet or other work record is completed

4.2 Roster is checked for future work allocation

4.3 Issues and variations are discussed and resolved with roster clerk

4.4 Required safeworking documentation and actions are completed in accordance with workplace procedures and rail regulations

4.5 Equipment is returned and stowed in accordance with workplace requirements

### **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

### **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

### **Unit Mapping Information**

This unit replaces and is equivalent to TLIC3031A Stable a heritage steam locomotive.

# Assessment Requirements for TLIC3031 Stable a heritage steam locomotive

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in heritage steam locomotives and associated equipment and procedures
- checking and replenishing fluids and fuel and carrying out lubrication requirements on a heritage steam locomotive
- communicating effectively with others
- completing relevant documentation
- conducting post-operational inspection of a heritage steam locomotive
- determining heritage steam locomotive stabling location
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- managing contingencies in accordance with workplace procedures
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures and information
- recognising problems that may arise when stabling a heritage steam locomotive and taking appropriate action.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines

- braking and safety system procedures
- emergency procedures
- heritage steam locomotive controls, instruments and indicators and their purpose, location and use
- monitoring devices; braking and power equipment, auxiliary systems, and signalling systems
- operating controls to start, accelerate, decelerate and stop a heritage steam locomotive
- procedure for completing relevant documentation
- procedures for identifying equipment defects, assessing and reporting for appropriate action
- procedures for managing hazardous situations
- procedures for minor maintenance, cleaning, lubricating and servicing heritage steam locomotives
- procedures for operating and shutting down ancillary systems
- procedures for operating and stabling a heritage steam locomotive
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- speed and load limits
- typical defects that can occur on a heritage steam locomotive and related action that should be taken.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIC3032 Operate and monitor a passenger electric tram

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to operate and monitor a passenger electric tram in accordance with relevant workplace practices, tramway regulations and codes of practice.

It includes planning and preparing a tram for passenger service, operating a passenger electric tram, operating a revenue collection system, monitoring passenger electric tram performance during service, and communicating effectively with other personnel.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines, as well as relevant state/territory road rules and tramway regulatory requirements.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when operating and monitoring a passenger electric tram across a variety of operational contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare passenger electric tram for operations**

#### **2 Operate passenger electric tram**

#### **3 Respond effectively to external operating factors**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Driving requirement is identified and confirmed from roster, shift card or other authorised documentation

1.2 Sign-on/log-on procedures at the depot are completed and tram to be driven is correctly identified and located

1.3 Resources are identified and obtained, including documentation

1.4 Hazards are identified, risks are assessed and risk control measures are implemented

1.5 Procedures for reporting incidents and the cancellation and non-operation of services are identified and followed

2.1 Tram is operated within specifications and organisational requirements to meet required schedules, routes, timetables and special services

2.2 On-board equipment is confirmed as being serviceable, and is operated in accordance with specifications and organisational requirements

2.3 Warning devices and gauges are monitored and responded to in accordance with organisational requirements

2.4 Operational restrictions established by the organisation and relevant legislation are observed

2.5 Tram is stopped in designated and approved locations and within limitations, to permit safe embarkation and alighting of all kinds of passengers

2.6 Destination signs are adjusted in accordance with work schedules

2.7 Wheelchair equipment where provided is operated when required in accordance with workplace procedures

3.1 Instructions are verified as required, interpreted and followed, in accordance with relevant regulatory requirements and organisational policies and procedures, to ensure actions taken are appropriate and safe

- 3.2 Fixed traffic and hand signals and verbal movement commands are interpreted and followed, in accordance with regulatory requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe
  - 3.3 Hazardous situations are recognised and appropriate action is taken to minimise risk to personnel and equipment
  - 3.4 Defensive driving practices are employed at all times
- 4 Operate revenue collection systems**
- 4.1 Start-up check is completed in accordance with workplace procedures
  - 4.2 Ticketing system is activated, operated and updated in accordance with workplace procedures
  - 4.3 Ticketing system defects are reported in accordance with workplace procedures
  - 4.4 Ticketing system is closed down, in accordance with authorised organisation procedures
- 5 Operate and monitor on-board equipment**
- 5.1 Electric tram equipment is monitored and operated to maintain optimum running conditions and to identify faults, defects and deficiencies
  - 5.2 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of tram, including communications with operations controller as required
  - 5.3 Faults, defects and deficiencies are assessed to determine risk of damage to equipment or injury to personnel
  - 5.4 Defects are reported and/or recorded
- 6 Work collaboratively**
- 6.1 Safe operation and monitoring of tram is maintained in collaboration with tram crew, tram controllers and other relevant personnel in accordance with workplace requirements
  - 6.2 Potential or actual conflicts or grievances with tram crew, tram controllers and other relevant personnel when operating a tram, are recognised and resolved in accordance with workplace procedures
  - 6.3 Regular communication is maintained with tram crew, drivers of other passenger electric trams and other relevant

personnel when operating a tram, in accordance with workplace procedures and regulatory requirements

6.4 Tram crew, tram controllers, drivers of other passenger electric trams and other relevant personnel are advised of operational problems, delays, safety incidents and emergency situations

6.5 Relevant information provided by tram crew, drivers of other passenger electric trams and other relevant personnel is interpreted and applied to driving activities in accordance with workplace procedures and applicable regulatory requirements

## **7 Follow all applicable tramway regulatory requirements**

7.1 Tramway regulatory requirements applicable to the operation of the tram and the track or road concerned are accessed, clarified as required and interpreted

7.2 Relevant tramway regulatory requirements are applied and followed when operating a tram

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIC3032A Operate and monitor a passenger electric tram.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIC3032 Operate and monitor a passenger electric tram

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in passenger electric trams and associated equipment and procedures
- checking and refilling sand boxes and carrying out sand system testing processes as required on a passenger electric tram
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring devices, braking and drive equipment, ancillary systems and signalling systems
- monitoring journey schedule
- reading and interpreting relevant instructions, procedures, information and signs
- recognising problems that may arise when operating and monitoring a passenger electric tram and taking appropriate action
- working collaboratively with others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- emergency procedures
- passenger electric tram controls, instruments and indicators and their purpose, location and use including controls to start, accelerate, decelerate and stop a passenger electric tram
- passenger electric tram operating characteristics, capabilities and limitations
- principles of defensive driving
- procedures and required protocol for operating electronic communications equipment
- procedures for adjusting controls to maximise efficient and safe running
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing safety incidents and hazardous situations that may arise when operating and monitoring a passenger electric tram
- procedures for operating and monitoring a passenger electric tram
- procedures for operating and monitoring ancillary equipment on the tram
- relevant Australian road rules and traffic authority
- relevant state/territory road and traffic authority and tramway operating procedures
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- speed and load limits for a tram
- track, road and route
- typical defects that can occur on a passenger electric tram and related action that should be taken
- workplace operational instructions.
- 

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the workplace.

A simulator assessment is not suitable for the final assessment of this unit of competency

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in the tram industry

- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIC3033 Drive an electric tram to operational requirements

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to drive an electric tram to operational requirements in accordance with relevant regulations and workplace practices.

It includes operating a tram efficiently and effectively, driving a tram, completing a journey and responding effectively to external factors and emergencies.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines, as well as relevant Australian road rules and applicable state/territory tramway regulatory requirements.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when driving an electric tram as part of workplace activities across a variety of operational contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Operate tram efficiently and effectively

1.1 Electric tram is operated in accordance with relevant codes of practice, workplace procedures and instructions

1.2 Electric tram is operated safely in accordance with traffic regulations

1.3 Electric tram is operated with due care of the vehicle

1.4 Movements are made within limits of vehicle and road dimensions, in accordance with specifications

1.5 Smooth and controlled movements are made

1.6 Electric tram performance is monitored to maintain optimum running condition and to identify faults, defects and efficiencies in accordance with organisational requirements

#### 2 Drive tram

2.1 Traffic flows are anticipated and appropriate defensive action is taken to maintain the efficiency of tram operation

2.2 Electric tram is constantly monitored for malfunctions or factors that may affect tram performance

#### 3 Complete tram journey

3.1 Tram documentation is received, interpreted and followed

3.2 Electric tram is operated and manoeuvred in accordance with tram documentation and procedures

3.3 Events and circumstances affecting planned running schedule are communicated to relevant personnel en route

3.4 Tram control and other instructions are received, interpreted and applied to ensure safe and effective control of the tram

3.5 Communications are maintained with tram controllers during tram journey in accordance with relevant organisational requirements

3.6 Instructions concerning tram operation are given to relevant personnel to ensure safe and efficient running

#### 4 Respond effectively to

4.1 Instructions are verified as required, interpreted and followed, in accordance with relevant regulatory requirements and

**external operating factors**

organisational policies and procedures, to ensure that actions taken are appropriate and safe

- 4.2 Fixed traffic and hand signals, and verbal movement commands are interpreted and followed, in accordance with regulatory requirements and organisational policies and procedures, to ensure actions taken are appropriate and safe
- 4.3 Hazardous situations are recognised and appropriate action is taken to minimise risk to personnel and equipment

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC3033A Drive an electric tram to operational requirements.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC3033 Drive an electric tram to operational requirements

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in electric trams, associated trams and ancillary equipment
- applying track and road knowledge
- communicating effectively with others
- completing relevant documentation
- driving defensively, applying precautions and required action to minimise, control or eliminate hazards that may exist when driving an electric tram in accordance with operational requirements
- identifying and assessing tram defects and deficiencies and taking appropriate action to report, isolate, repair or replace identified defective equipment in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring journey schedule
- operating an electric tram and monitoring its performance to facilitate optimum safe operation
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- recognising problems that may arise when driving an electric tram and taking appropriate action
- working collaboratively with others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- braking and safety system procedures
- defensive driving principles
- electric tram controls, instruments and indicators and their purpose, location and use including controls to start, accelerate, decelerate and stop a tram
- electric tram monitoring devices, braking and drive equipment, ancillary systems and signalling systems
- electric tram operating characteristics, capabilities and limitations
- emergency procedures
- procedures for adjusting controls to maximise efficient and safe running
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing safety incidents and hazardous situations
- procedures for operating and monitoring an electric tram
- relevant driver identification procedures, licences and authorities required to drive an electric tram
- relevant state/territory road and traffic authority and tramway operating procedures
- relevant state/territory road and traffic authority road rules
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- track, road and route knowledge
- tram speed limits
- typical defects that can occur on an electric tram and related action that should be taken.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIC3034 Berth and shut down an electric tram

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to berth and shut down an electric tram. It includes determining a required berthing location; berthing, shutting down and securing a tram; carrying out all required post-operational activities; and completing post-operational paperwork.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines, as well as relevant tramway regulatory requirements.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when berthing and shutting down an electric tram, as part of workplace activities across a variety of operational contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Determine berthing location

#### 2 Berth and shut down an electric tram

#### 3 Carry out post-operational checks

#### 4 Secure an electric tram

#### 5 Complete post-operational paperwork

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Contact is made with tram controller and depot staff, or information is obtained from an information board, to determine planned location for berthing tram

1.2 Directions of tram controller and depot staff are interpreted and followed

2.1 Hazards are identified, risks are assessed and risk control measures are implemented

2.2 Electric tram is berthed in accordance with organisational and site requirements

2.3 Shut-down procedures are carried out in accordance with specifications and organisational requirements

3.1 Visual and other checks are made of tram in accordance with workplace procedures

3.2 Identified faults and defects are fixed or reported and recorded in accordance with workplace procedures

3.3 Faulty and defective equipment that presents a safety risk is reported in accordance with workplace procedures and relevant regulations

3.4 Outcomes of post-operational checks are recorded in accordance with workplace procedures

4.1 Brakes are applied in accordance with workplace procedures

4.2 Electric tram is secured in accordance with depot requirements

5.1 Timesheet or other work record is completed

5.2 Roster is checked for future work allocation

5.3 Issues and variations are discussed and resolved with roster clerk

5.4 All required documentation is completed in accordance with workplace procedures

- 5.5 All equipment is returned and stowed in accordance with workplace requirements
- 5.6 Electric tram records are completed in accordance with workplace procedures and regulatory requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC3034A Berth and shut down an electric tram.

## Links

Companion Volume implementation guides are found in VETNet -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC3034 Berth and shut down an electric tram

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in trams and associated equipment and procedures
- communicating effectively with others
- conducting a visual inspection of an electric tram
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures and information
- recognising problems that may arise and taking appropriate action
- shutting down an electric tram after service
- working collaboratively with others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- braking and safety system procedures
- electric tram controls, instruments and indicators and their purpose, location and use
- emergency procedures
- monitoring devices; braking and power equipment; safety systems, ancillary systems; and signalling systems
- operating controls to start, accelerate, decelerate and stop an electric tram

- procedure for completing relevant documentation when berthing and shutting down an electric tram
- procedures and required protocol for operating electronic communications equipment
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing hazardous situations
- procedures for operating and shutting down ancillary systems
- procedures for operating, berthing and shutting down an electric tram
- relevant state/territory road and traffic authority and tramway operating procedures
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- speed and load limit compliance requirements
- typical defects that can occur on an electric tram and related action that should be taken.
- 

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations*, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate tram workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# TLIC3039 Operate and monitor a monorail train

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to operate and monitor a monorail train in accordance with relevant workplace practices, regulations and codes of practice.

It includes planning and identifying a monorail train for operations, operating a monorail train, monitoring a monorail train's performance during service, and communicating effectively with Network Control Officer and other personnel.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when operating and monitoring a monorail train across a variety of operational contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare for monorail train operations**

#### **2 Operate and monitor monorail train in normal operational mode**

#### **3 Operate monorail train in abnormal situations**

#### **4 Monitor on-board equipment**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Driving requirement is identified and confirmed from roster, shift card or other authorised documentation

1.2 Sign-on/log-on procedures at the depot are completed and monorail train to be operated is correctly identified

1.3 Essential equipment is identified and obtained

2.1 Monorail train is operated within specifications and organisational requirements to meet required schedules and special services

2.2 On-board equipment is confirmed as being serviceable, and is operated in accordance with specifications and organisation requirements

2.3 Warning devices and gauges are monitored and responded to in accordance with organisational requirements

2.4 Operational restrictions established by the organisation and relevant legislation are observed

2.5 Monorail train is stopped in designated and approved locations and within limitations, to permit safe embarkation and alighting of all passengers

3.1 In an abnormal situation, Network Control Officer is contacted and their instructions are requested

3.2 Appropriate mode of operation is selected and implemented when authorised by Network Control Officer

3.3 All instructions from Network Control Officer are followed

4.1 Equipment is monitored to maintain optimum running conditions and to identify faults, defects and deficiencies

4.2 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of monorail train, including communications with Network Control Officer as necessary

- 4.3 Faults, defects and deficiencies are assessed as instructed by Network Control Officer, to determine risk of damage to equipment or injury to personnel
  - 4.4 Defects are reported and/or recorded
- 5 Communicate with Network Control Officer**
- 5.1 Regular communication is maintained with Network Control Officer when operating monorail train in accordance with workplace procedures and regulatory requirements
  - 5.2 Network Control Officer is advised of operational problems, delays, safety incidents and emergency situations
  - 5.3 Relevant information provided by Network Control Officer is interpreted and applied to driving activities in accordance with workplace procedures and applicable regulatory requirements
- 6 Follow all applicable regulatory requirements**
- 6.1 Regulatory requirements applicable to operating monorail train are accessed and interpreted
  - 6.2 Relevant regulatory requirements are applied and followed when operating monorail train

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC3039A Operate and monitor a monorail train.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC3039 Operate and monitor a monorail train

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying track and road knowledge when driving a monorail train
- communicating effectively with Network Control Officer
- completing relevant documentation
- identifying and assessing train defects and deficiencies, and taking appropriate action to report identified defective equipment in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following instructions
- reading and interpreting relevant instructions, procedures, information and signs
- recognising problems that may arise and taking appropriate action
- working collaboratively with others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- monorail train controls, instruments and indicators and their purpose, location and use including controls to start, accelerate, decelerate and stop the train
- monorail train monitoring devices, braking and drive equipment and ancillary systems
- monorail train operating characteristics, capabilities and limitations including all modes of operation
- procedures for adjusting controls to maximise efficient and safe running
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing safety incidents and hazardous situations
- procedures for operating and monitoring ancillary equipment on the train
- procedures for operating and monitoring monorail train
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- track limitations, speed limitations, curves and gradients and location of indicators
- typical defects that can occur on a monorail train and related action that should be taken.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the workplace.

A simulator assessment is not suitable for the final assessment of this unit of competency.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## Links

Companion Volume implementation guides are found in VETNet -

# TLIC3045 Operate road/rail vehicle

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to operate road/rail vehicles on track in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes performing pre-operational and post-operational checks, on tracking and off tracking vehicles, operating equipment, and completing required documentation. It encompasses the operation of all road/rail on-track vehicles.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety and safeworking requirements and to comply with relevant codes of practice and/or guidelines.

Operators of road/rail vehicles may need to have applicable road and/or high risk licence or certification requirements for the type of vehicle being used.

It involves the application of routine operational principles and procedures when operating road/rail vehicles as part of workplace activities across a variety of operational contexts.

A road vehicle fitted with retractable rail guidance wheels (also known as a hi-rail vehicle) and may also involve:

- weed sprayer
- light-medium rigid vehicles
- excavators
- pettibone
- tractors
- four-wheel drives.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Perform pre-operational equipment checks**

#### **2 On track and operate road/rail vehicle**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Pre-operational equipment checks are conducted in accordance with manufacturer specifications or local maintenance schedules and operational procedures
- 1.2 Logbooks are checked and accurately completed as required
- 1.3 Deficiencies with equipment are identified and rectified in accordance with workplace procedures
- 1.4 Relevant people are notified of problems and/or documentation is completed
- 2.1 On-tracking location is identified and appropriate on-track permission/authority is obtained
- 2.2 Vehicle is placed on track and set up to operate in accordance with manufacturer specifications and organisational requirements
- 2.3 Vehicle is operated in a safe and efficient manner in accordance with relevant codes of practice, safeworking systems, and manufacturer and local working instructions
- 2.4 Vehicle is operated in accordance with prevailing operating conditions to ensure safe working and to minimise/eliminate potential hazards or accidents
- 2.5 Warning systems are monitored and responded to appropriately during operation to maintain correct functionality of vehicle

- 3 Off track road/rail vehicle**
- 3.1 Off-track location is identified and appropriate permissions to off track vehicle are obtained as required
  - 3.2 Front/rear rail wheels are retracted in accordance with manufacturer specifications
  - 3.3 Vehicle is driven not less than three metres from running rails, and safety locks are applied to rail wheels
  - 3.4 Vehicle is confirmed with Network Control Officer as being clear of all running lines
- 4 Perform post-operational equipment procedures**
- 4.1 Vehicle is left stored in appropriate manner and location to ensure security and protection of equipment
  - 4.2 Post-operational vehicle checks are conducted in accordance with manufacturer specifications or local maintenance schedules to identify defects and maintenance requirements
  - 4.3 Deficiencies with equipment are identified and rectified in an appropriate manner to maintain equipment in correct functionality
  - 4.4 Relevant people are notified of problems and/or documentation is completed in accordance with instructions and relevant codes of practice
  - 4.5 Required documentation is completed in a timely, accurate and complete manner in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC3045A Operate road/rail vehicle.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIC3045 Operate road/rail vehicle

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and interpreting train movement information
- applying relevant safeworking and workplace procedures
- communicating effectively with relevant personnel
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying, selecting and using tools and equipment
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- obtaining appropriate on-track permission/authorities
- on railing and off railing vehicles in accordance with workplace procedures
- operating and adapting to differences in equipment in accordance with operating procedures
- operating road/rail vehicles for which certificated, licensed or approved
- operating road/rail vehicles on rail in accordance with Rail Infrastructure Manager operational procedures
- performing pre- and post-operational checks in accordance with workplace procedures
- planning and organising work
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- defects that can occur on road/rail vehicles and related action that should be taken
- emergency management plan/procedures
- hazards that may exist when operating road/rail vehicles, and ways of controlling the risks involved
- manufacturer specifications and road/rail vehicle operational requirements
- problems that may occur when on tracking and off tracking road/rail vehicles, and action that can be taken to report or resolve these problems in accordance with workplace procedures
- problems that may occur when operating road/rail vehicles, and action that can be taken to report or resolve these problems in accordance with workplace procedures
- relevant rail danger zones
- relevant safety, work health safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant sections of applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- technical specifications and manuals
- track structure and geometry
- types of road/rail vehicles and their applications
- workplace procedures for operating road/rail vehicles.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIC3046 Drive and operate electric passenger train

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to drive and operate an electric passenger train to operational requirements in accordance with safeworking and regulatory requirements and workplace procedures.

It includes applying train management techniques to manage the movement of a train, conducting all movements and related activities required to meet operational requirements, changing ends, and handing over a train to a relief crew.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is generally performed without supervision and within a team environment. It involves the application of routine operational principles and procedures when driving electric passenger trains to operational requirements as part of workplace activities across a variety of operational contexts within the Australian rail systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Drive train efficiently and effectively**

#### **2 Operate train in accordance with operating procedures**

#### **3 Manage**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Train is operated in accordance with relevant codes of practice, workplace procedures and instructions
- 1.2 Train is operated safely in accordance with track/road characteristics and route conditions
- 1.3 Hazards are identified, risks are assessed and risk control measures are implemented
- 1.4 Train operations are controlled to minimise wear, maximise efficiency and avoid damage
- 1.5 Train is operated with due care for passenger comfort and quality of ride
- 1.6 Train is safely operated to specified timetable and schedule in accordance with on-time running standards
- 1.7 Performance of equipment and rolling stock is monitored to maintain optimum running conditions and to identify faults, defects and efficiencies
- 1.8 Relevant codes of practice, work health and safety (WHS)/occupational health safety (OHS) and environmental requirements are followed to prevent injury and damage
- 2.1 Train documentation is received, interpreted and followed
- 2.2 Relevant codes of practice, safeworking and signalling requirements are adhered to throughout train operations
- 2.3 Network Control Officer instructions and other instructions are received, interpreted and applied to ensure safe and effective control of train
- 2.4 Communications are maintained with relevant personnel during train journey in accordance with relevant codes of practice and safeworking systems
- 2.5 Instructions about train operation are given to relevant personnel to ensure safe and efficient running
- 3.1 Passengers are advised of station identification, emergency

- communications** situations and other critical information as required, using train communications system
- 3.2 Network Control Officer and other instructions are received, interpreted and applied to ensure safe and effective control of train
  - 3.3 Communications are maintained with Network Control Officer and other relevant personnel during train journey in accordance with workplace procedures, relevant codes of practice and safeworking systems
  - 3.4 Instructions about train operation are given to relevant personnel to ensure safe and efficient on-time running
  - 3.5 Instructions are verified as required, interpreted and followed, in accordance with relevant codes of practice, safeworking systems and requirements, and organisational policies and procedures, to ensure actions taken are appropriate and safe
  - 3.6 Fixed and hand signals, and verbal movement commands are interpreted and followed, in accordance with relevant codes of practice, safeworking systems and organisational policies and procedures, to ensure actions taken are appropriate and safe
- 4 Change ends**
- 4.1 Arrival procedures are carried out in accordance with organisational policies and procedures
  - 4.2 Checks and terminus inspections are carried out in accordance with organisational policies and procedures
  - 4.3 Departure procedures are carried out in accordance with organisational policies and procedures
- 5 Carry out in-service inspections**
- 5.1 Train checks are made in accordance with workplace procedures
  - 5.2 Problems and defects are identified and reported/rectified in accordance with workplace procedures, other regulatory requirements and manufacturer instructions
  - 5.3 Incidents or unusual occurrences are reported to relevant personnel in accordance with established policies and procedures
- 6 Handover train to relieving driver**
- 6.1 Identity of relieving driver is checked and confirmed as required

- 6.2 Relieving driver is advised of condition and location of train as required
  - 6.3 Relieving driver is updated and is made aware of relevant documentation as required
- 7 Accept train handover as relief driver**
- 7.1 Relieving driver position is taken up at correct time and location in accordance with organisational requirements
  - 7.2 Identification is presented to train driver being relieved, as required
  - 7.3 Relevant documentation is identified and referred to in accordance with organisational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC3046A Drive and operate electric passenger train.

## Links

# Assessment Requirements for TLIC3046 Drive and operate electric passenger train

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in trains, associated trains and ancillary equipment
- carrying out train handover in accordance with workplace procedures
- communicating effectively with others
- completing relevant documentation
- driving train efficiently and effectively
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- maintaining on-time running
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring train performance to facilitate optimum safe operation
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- recognising problems that may arise and taking appropriate action
- securing electric passenger train
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others as part of a train crew
- working systematically with required attention to detail without injury to self or others, or damage to vehicles or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- procedures and required protocol for operating electronic communications equipment
- procedures for carrying out in-service checks
- relevant WHS/OHS and environmental procedures and regulations
- requirements for completing relevant documentation
- track and road characteristics including: track limitations, speed limitations, gauge limitation, curves and gradients, location of signals and crossings, crossovers, and yard and siding layouts
- train characteristics
- train equipment and systems including instruments and indicators and their purpose, location and use
- workplace operating procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the workplace.

A simulator assessment is not suitable for the final assessment of this unit of competency

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

## **TLIC3047 Stable electric passenger train**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to stable an electric passenger train in accordance with workplace procedures.

It includes conducting pre-stabling checks, stabling an electric passenger train and conducting post-stabling checks in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is generally performed without supervision and within a team environment. It involves the application of routine operational principles and procedures when stabling electric passenger trains as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

C – Vehicle Operation

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Conduct pre-stabling checks

1.1 Train stabling requirements are confirmed through workplace documents and/or relevant personnel

1.2 Hazards are identified, risks are assessed and risk control measures are implemented

1.3 Location safety requirements are identified and followed in accordance with workplace procedures

#### 2 Stable electric passenger train

2.1 Train is shunted and/or stabled in accordance with workplace instructions and procedures

2.2 Communications protocols are established and performed in accordance with workplace requirements as required

2.3 On arrival at stabling location, train is secured and brakes are cut out/isolated

2.4 Visual inspection of train is conducted in accordance with workplace requirements

#### 3 Conduct post-stabling checks

3.1 Post-operational checks of train are conducted in accordance with workplace procedures

3.2 Problems and defects are identified and reported/rectified in accordance with workplace procedures, regulatory requirements and manufacturer instructions as required

3.3 Safety devices are activated or put in position to ensure safety of personnel and equipment as required

3.4 Reporting/documentation is completed in accordance with workplace procedures as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC3047A Stable electric passenger train.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC3047 Stable electric passenger train

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- carrying out required pre-stabling, stabling and post-stabling checks of train
- communicating effectively with others
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities to cater for variations in workplace contexts and environment
- monitoring and anticipating operational hazards and taking appropriate action
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- responding appropriately to abnormal situations, safety incidents and emergencies
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- stabling electric train in more than one location including sidings and depots/yards
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- operational instructions including shut-down procedures
- procedures and required protocol for operating electronic communications equipment
- procedures for carrying out terminus checks
- procedures for pre-stabling and post-stabling operational checks
- relevant safety, WHS/OHS and environmental procedures and regulations
- train controls, instruments and indicators and their purpose, location and use
- yard or siding information including layout, entry and exit requirements and emergency procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the rail corridor workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIC3048 Shunt, couple and uncouple electric passenger trains

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to shunt, couple and uncouple an electric passenger train to operational requirements in accordance with safeworking and regulatory requirements, and workplace procedures. This includes planning and preparing for shunting operations, shunting the train, coupling and uncoupling the train, and using a coupling adaptor.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is generally performed without supervision and within a team environment. It involves the application of routine operational principles and procedures when shunting, coupling and uncoupling electric passenger trains to operational requirements, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan and prepare for shunting operation**

- 1.1 Shunting requirements are confirmed through workplace documents and/or relevant personnel
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Local safety requirements are identified and followed in accordance with workplace procedures
- 1.4 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are followed to prevent injury and damage

#### **2 Shunt trains**

- 2.1 Points, levers and/or switches are operated as required in accordance with workplace requirements
- 2.2 Audible signals, hand signals and other line of sight communications are used to assist the control of train movements
- 2.3 Hand, light and radio shunting commands are responded to in accordance with workplace requirements
- 2.4 Pre-movement inspection/tests are carried out prior to moving trains
- 2.5 Train is shunted and positioned in accordance with operational/workplace requirements
- 2.6 Train is secured after shunt movement in accordance with workplace requirements

#### **3 Couple trains**

- 3.1 Type of connections required are identified prior to coupling
- 3.2 Trains to be coupled are positioned in accordance with operating procedures and workplace requirements
- 3.3 Trains to be coupled are fully secured
- 3.4 Alignment of couplers in the appropriate position for type of connection required is ensured
- 3.5 Prior to coupling trains, safety requirements are ensured

- 3.6 Trains are coupled in accordance with operating procedures and workplace requirements
- 3.7 Post-coupling inspection/tests are carried out in accordance with operating procedures and workplace requirements
- 4 Uncouple trains**
  - 4.1 Trains to be uncoupled are identified and pre-uncoupling checks and, as required, procedures, are conducted in accordance with operating procedures and workplace requirements
  - 4.2 Prior to uncoupling trains, safety requirements are ensured
  - 4.3 Train to remain after uncoupling is fully secured
  - 4.4 Trains are uncoupled in accordance with operating procedures and workplace requirements
  - 4.5 Post-uncoupling inspection/tests are carried out in accordance with operating procedures and workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC3048B Shunt couple and uncouple electric passenger trains.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC3048 Shunt, couple and uncouple electric passenger trains

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying rail safety practices and workplace procedures
- assessing shunting, coupling and uncoupling defects
- carrying out pre-shunting checks in accordance with workplace requirements
- communicating effectively with others
- coupling an electric passenger train
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying and assessing electric passenger train defects and deficiencies, and taking appropriate action to report, isolate, repair or replace identified defective equipment, in accordance with workplace procedures
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in trains and related equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable minimum standards and approved compliance codes and/or guidelines
- communications protocols
- coupling systems, their components and their operation
- electric passenger train shunting, coupling and uncoupling diagnostic techniques
- emergency procedures
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations, including codes of practice for manual handling
- shunting procedures and requirements
- types of couplers and their purpose
- types of coupling adaptors, their purpose and use.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# **TLIC3052 Assist with shunting, coupling and uncoupling electric passenger trains**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to assist a train driver to shunt, couple and uncouple an electric passenger train to operational requirements in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes assisting with: planning and preparing for shunting operations, shunting the train, coupling and uncoupling the train, and using a coupling adaptor.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety and safeworking requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed with minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to assist with shunting, coupling and uncoupling electric passenger trains to operational requirements as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

C – Vehicle Operation

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Assist with preparing for shunting operation

1.1 Shunting requirements are confirmed through workplace documents and/or relevant personnel

1.2 Local safety requirements are identified and followed in accordance with workplace procedures

1.3 Hazards are identified, risks are assessed and risk control measures are implemented

1.4 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are followed to prevent injury and damage

#### 2 Assist with shunting trains

2.1 Points, levers, and/or switches are operated in accordance with workplace requirements as required

2.2 Audible signals, hand signals and other line of sight communications are used to assist control of train movements

2.3 Hand, light and radio shunting commands used are responded to in accordance with workplace requirements

2.4 Pre-movement inspection/tests are carried out prior to moving trains

#### 3 Assist with coupling trains

3.1 Type of connections required are identified prior to coupling

3.2 Trains to be coupled are positioned in accordance with operating procedures and workplace requirements, to ensure couplers are aligned and in the appropriate position for type of connection required

3.3 All safety requirements are met prior to coupling trains

3.4 After trains are coupled, post-coupling inspection/tests are carried out in accordance with operating procedures and workplace requirements

#### 4 Assist with uncoupling trains

4.1 Train to be uncoupled is identified and checks are made to ensure all safety requirements are met prior to uncoupling

4.2 Train is uncoupled in accordance with operating procedures and workplace requirements

## **5 Use coupling adaptor**

- 4.3 Post-uncoupling inspection/tests are carried out in accordance with operating procedures and workplace requirements
- 5.1 Situations requiring the use of a coupling adaptor are identified in accordance with workplace procedures
- 5.2 Coupling adaptor is accessed and transported to required location for use
- 5.3 All safety requirements are met prior to fitting coupling adaptor
- 5.4 Coupling adaptor is attached to one of the trains prior to coupling in accordance with workplace procedures
- 5.5 Trains are coupled in accordance with workplace procedures and coupling adaptor is secured in place
- 5.6 Post-coupling inspection/tests and/or procedures are carried out in accordance with operating procedures and workplace requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIC3052 Assist with shunting, coupling and uncoupling electric passenger trains

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least two** separate occasions and **in two** separate locations and include:

- applying relevant safeworking and workplace procedures
- assisting with shunting trains in more than one location including sidings and depots/yards
- carrying out pre-shunting checks in accordance with workplace procedures
- communicating effectively with others
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions defects promptly, in accordance with workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications protocols
- coupling systems, their components and their operation
- diagnostic techniques relating to shunting, coupling and uncoupling electric passenger trains
- emergency procedures
- relevant rail danger zones
- relevant sections of applicable state/territory legislated rail safety and safeworking requirements, codes of practice and/or guidelines
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations including codes of practice for manual handling
- shunting workplace procedures and requirements
- types of couplers and their purpose
- types of coupling adaptors and their purpose.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

- Resources for assessment include:
- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, safeworking system, codes of practice and operation manuals.

# TLIC3057 Perform guard duties as part of electric passenger train operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to perform guard duties as part of electric passenger train operations in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes assisting in all movements and related activities required to achieve operational requirements, changing work locations, handing over a train to a relief crew, providing customer service and maintaining customer safety.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety and safeworking requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when performing train guard duties in traffic for an electric passenger train in accordance with operational requirements, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Perform on-train role/duties efficiently and effectively**

1.1 On-train duties are performed in accordance with relevant codes of practice, workplace procedures and instructions

1.2 Right of way activities are performed to ensure train is operated safely within the confines of platform or station limits

1.3 On-train duties are performed in a manner that provides optimal customer safety and comfort

1.4 On-train duties are performed to meet specified timetable and schedule in accordance with on-time running standards

1.5 Train carriages, and equipment performance and operation are monitored to optimise running conditions by identifying faults, defects and deficiencies

1.6 Relevant workplace procedures, work health and safety (WHS)/occupational health and safety (OHS) and environmental requirements are followed to prevent injury and damage

### **2 Complete train journey**

2.1 Train documentation is received, interpreted and applied in accordance with relevant workplace procedures and safeworking systems

2.2 Relevant workplace procedures, safeworking and signalling requirements are followed throughout train operations

2.3 Communications are maintained with relevant personnel during train journey in accordance with relevant workplace procedures and safeworking systems

2.4 Assistance is provided to customers as required in accordance with workplace requirements

2.5 Correspondence and/or cash and/or valuables are carried in cooperation with relevant personnel

2.6 Platform duties are performed in accordance with workplace procedures

### **3 Manage**

3.1 Passengers are advised of station identification, emergency

**communications**

situations and other critical information, using train communications system in accordance with workplace procedures

- 3.2 Instructions from network control officer and other relevant personnel are received, interpreted and applied to ensure safe and effective control of train
- 3.3 Communications are maintained with network control and other relevant personnel during train journey in accordance with workplace rules and procedures, and safeworking systems
- 3.4 Instructions concerning train operation are given to relevant personnel to ensure safe and efficient on-time running
- 3.5 Instructions are verified as required, interpreted and followed, in accordance with relevant codes of practice, safeworking systems and requirements, and organisational policies and procedures, to ensure actions taken are appropriate and safe
- 3.6 Fixed and hand signals, and verbal movement commands are interpreted and followed, in accordance with safeworking systems and organisational policies and procedures

**4 Carry out inspections during train journey**

- 4.1 Train visual checks are made in accordance with workplace procedures
- 4.2 Identified problems and or defects are reported and/or rectified in accordance with workplace procedures, other regulatory requirements and manufacturer instructions
- 4.3 Incidents or unusual occurrences are reported to relevant personnel in accordance with established policies and procedures
- 4.4 Safety of train is monitored through on-board surveillance systems

**5 Change ends**

- 5.1 Arrival procedures are carried out in accordance with workplace procedures
- 5.2 Checks and terminus inspections of train are carried out in accordance with workplace procedures
- 5.3 Incidents or unusual occurrences are reported to relevant personnel in accordance with established policies and procedures

- 6 Conduct train handover to relieving crew**
- 6.1 Identity of relieving crew is checked and confirmed
  - 6.2 Relevant personnel are advised of condition and location of train
  - 6.3 Relieving crew is updated and documentation is completed and/or handed over as required
- 7 Accept train handover as relief guard**
- 7.1 Relieving guard position is taken up at correct time and location in accordance with organisational requirements
  - 7.2 Identity of train guard is confirmed
  - 7.3 Train status and/or other relevant information and/or documentation is received and referred to in accordance with organisational requirements as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC3057A Perform guard duties as part of electric passenger train operations.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC3057 Perform guard duties as part of electric passenger train operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in trains and ancillary equipment
- applying information about track or road to train operations
- applying relevant safeworking system and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring journey schedule
- monitoring train performance and security to facilitate optimum safe operation
- monitoring train performance including passenger safety and comfort during service
- performing handover and relief activities in accordance with workplace procedures
- performing on-train guard duties in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs
- recognising problems that may arise and taking appropriate action
- working systematically with required attention to detail without injury to self or others, vehicles or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice

and/or guidelines

- on-train controls, instruments and indicators and their purpose, location and use
- procedures for carrying out in-service checks
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- requirements for completing relevant documentation
- track and road characteristics
- train characteristics
- train equipment and systems
- workplace procedures and operating requirements.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# **TLIC3072 Conduct the duties of an assistant on a heritage locomotive**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to conduct the duties of an assistant on a heritage locomotive in accordance with workplace procedures and the requirements of relevant rail regulations and codes of practice.

It includes carrying out or assisting with the following activities on a heritage locomotive in accordance with organisational requirements: checking, preparing and starting up prior to operation; coupling, uncoupling and shunting; assisting with operations and stabling.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines when conducting the duties of an assistant on a heritage locomotive.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

C – Vehicle Operation

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

Elements describe the      Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

**1 Prepare to assist with operating a heritage locomotive**

- 1.1 Roster is checked and interpreted for day's operational activities
- 1.2 Allocation of locomotive is checked and confirmed
- 1.3 Train schedules/notices and other operational and regulatory documentation is accessed and interpreted in accordance with workplace procedures
- 1.4 Personal protective equipment required for operating locomotive is obtained
- 1.5 Hazards are identified, risks are assessed and control measures are implemented
- 1.6 Trackside safety and basic electrification awareness procedures are followed while locating allocated locomotive

**2 Assist with preparing and starting a heritage locomotive**

- 2.1 Logbook is checked to confirm serviceability of locomotive
- 2.2 Locomotive is confirmed as being securely stabled prior to commencing preparation and safety checks
- 2.3 Preparation and safety checks are conducted in accordance with work health and safety (WHS)/occupational health and safety (OHS) and other workplace policies and procedures
- 2.4 Fluid levels and mechanical equipment are checked and appropriate action is taken as required
- 2.5 Locomotive is started in accordance with manufacturer and/or organisational instructions
- 2.6 For critical or serious equipment faults that cannot be readily rectified, locomotive is shut down, faulty equipment is isolated and tagged, and problem is reported for rectification
- 2.7 All instruments and gauges are observed, readings are interpreted to confirm effective air and electrical operation, and where a problem is indicated, action is taken to determine cause and to rectify or report the situation
- 2.8 Fluid levels are rechecked after starting and appropriate action is taken as required

- 2.9 Assistance is provided with pre-departure checks
- 2.10 Logbook and other service records on the locomotive are completed in accordance with organisational requirements
- 3 Assist with coupling, uncoupling and securing rail vehicles**
- 3.1 Rail vehicles are positioned to meet coupling requirements in accordance with organisational policies and procedures
- 3.2 Coupling systems are identified and applied appropriately to couple and/or uncouple rail vehicles
- 3.3 Connecting hoses and electrical couplings are connected/disconnected in accordance with organisational policies and procedures
- 3.4 Hand brakes and other securing devices are applied/released and attached/removed in accordance with organisational policies and procedures
- 4 Assist with operating a heritage locomotive**
- 4.1 Safeworking activities are undertaken in accordance with organisational and/or network owner policies and procedures
- 4.2 Supervisory controls and indicators are monitored and operated in accordance with organisational policies and procedures
- 4.3 Assistance is provided with communications for network control officer and ground staff
- 4.4 Observation of all aspects of the rail corridor and environs is maintained and communicated to driver in accordance with organisational and/or network owner policies and procedures
- 4.5 If driver is incapacitated train is stopped, Network Control Officer is informed and instructions are followed in accordance with organisational policies and procedures
- 4.6 Assistance with locomotive operation is provided as requested by driver
- 5 Assist with stabling a heritage**
- 5.1 Locomotive is secured in accordance with directions, organisational procedures and rail regulations

**locomotive**

- 5.2 Locomotive is shut down in accordance with manufacturer and/or operator instructions
- 5.3 Logbook and other service records on the locomotive are completed in accordance with organisational requirements
- 5.4 Cab is secured in accordance with organisational procedures

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

**Unit Mapping Information**

This unit replaces and is equivalent to TLIC3072A Conduct the duties of an assistant on a heritage locomotive.

**Links**

# Assessment Requirements for TLIC3072 Conduct the duties of an assistant on a heritage locomotive

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking system and workplace procedures
- assisting with pre-operational activities in accordance with workplace procedures
- checking and replenishing fluids and carrying out lubrication requirements on a heritage locomotive
- communicating effectively with others when inspecting and preparing a heritage locomotive
- completing relevant documentation
- conducting a visual inspection of a heritage locomotive and associated equipment
- documenting outcomes of visually inspecting a heritage locomotive
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following instructions and prioritising work
- preparing a heritage locomotive prior to service
- reading, interpreting and following relevant instructions, procedures, information and signs
- working collaboratively with others as part of a train crew.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- braking and safety system procedures for a heritage locomotive
- emergency procedures
- external features of a heritage locomotive that must be checked during a pre-operational visual inspection
- functions of auxiliary systems on a motive power unit and related checks for correct operation
- in-cab pre-operational checks for a heritage locomotive
- lubrication requirements for a motive power unit
- operating controls to start, accelerate, decelerate and stop a heritage locomotive
- operating procedures for a heritage locomotive
- principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
- procedures for checking fuel and fluid levels, and carrying out lubrication processes on a heritage locomotive
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing and controlling hazardous situations when preparing and starting up a heritage locomotive
- procedures for starting and operating auxiliary systems on a heritage locomotive
- relevant rail danger zones
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- requirements for completing relevant documentation when inspecting and preparing a heritage locomotive
- start-up procedures for a heritage locomotive
- visual inspection procedures for a heritage locomotive
- workplace procedures and operating requirements.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the rail corridor workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals

## TLIC3073 Fire a steam locomotive

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to conduct the duties of an assistant on a steam locomotive in accordance with workplace procedures and the requirements of relevant rail regulations and codes of practice.

It includes preparing for operations, preparing and starting the locomotive, assisting with un/coupling and securing the locomotive, and assisting in operating and stabling the locomotive in accordance with organisational requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines to fire a steam locomotive.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

C - Vehicle Operation

### Unit Sector

Not applicable.

### Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Prepare to assist with operating a steam locomotive**
  - 1.1 Roster is checked and interpreted for day's operational activities
  - 1.2 Allocation of locomotive is checked
  - 1.3 Train schedules/notices and other operational and regulatory documentation are accessed and interpreted in accordance with workplace procedures
  - 1.4 Personal protective equipment required to operate the locomotive is obtained
  - 1.5 Trackside safety and electrification awareness procedures are followed while locating allocated locomotive
- 2 Prepare and start a steam locomotive**
  - 2.1 Logbook is checked to confirm serviceability of locomotive
  - 2.2 Locomotive is confirmed as being securely stabled prior to commencing preparation and safety checks
  - 2.3 Preparation and safety checks are conducted in accordance with work health and safety (WHS)/occupational health and safety (OHS) and other organisational policies and procedures
  - 2.4 Water levels and fuels are checked and replenished as required
  - 2.5 Mechanical equipment is checked and appropriate action is taken as required
  - 2.6 Fire is lit and steam is raised in accordance with organisational instructions, with consideration for thermal expansion and in accordance with environmental procedures and practices
  - 2.7 For critical or serious equipment faults that cannot be readily rectified, fire is dropped, faulty equipment is isolated and problem is reported for rectification
  - 2.8 All indicators and gauges are continuously monitored and readings are interpreted to confirm effective pressure, water level and air operation, and where a problem is indicated, action is taken to determine the cause and to rectify or report the situation
  - 2.9 Operation of locomotive equipment is established and verified
  - 2.10 Locomotive lubrication, cleaning, preparation, and provisioning are undertaken in accordance with organisational requirements
  - 2.11 Logbook and other service records on the locomotive are

- completed in accordance with organisational requirements
- 3 Assist with coupling, uncoupling and securing rail vehicles**
- 3.1 Rail vehicles are positioned to meet coupling requirements in accordance with organisational policies and procedures
  - 3.2 Coupling systems are identified and applied appropriately to couple and/or uncouple rail vehicles
  - 3.3 Connecting hoses and electrical couplings are connected/disconnected in accordance with organisational policies and procedures
  - 3.4 Hand brakes and other securing devices are applied/released and attached/removed in accordance with organisational policies and procedures
- 4 Assist with operating a steam locomotive**
- 4.1 Safeworking activities are undertaken in accordance with organisational and/or network owner policies and procedures
  - 4.2 Gauges and indicators are monitored and operated in accordance with organisational policies and procedures
  - 4.3 Boiler is fired to meet load requirements in accordance with environmental procedures and practices
  - 4.4 Water level is maintained to ensure safe boiler operation meets load requirements and track characteristics
  - 4.5 Assistance with communications is provided when communicating with Network Control Officer and ground staff
  - 4.6 Observation of all aspects of the rail corridor and environs is maintained and communicated to driver in accordance with organisational and/or network owner policies and procedures
  - 4.7 In case of driver being incapacitated, train is stopped, Network Control Officer is informed and instructions are followed in accordance with organisational policies and procedures
  - 4.8 Assistance with locomotive operation is provided as requested by driver
- 5 Assist with stabling a steam locomotive**
- 5.1 Locomotive is secured in accordance with directions, workplace procedures and rail regulations
  - 5.2 Boiler water levels are checked and replenished as required
  - 5.3 Locomotive is shut down in accordance with operator instructions

- 5.4 Ash is disposed of responsibly in accordance with network owner and operator policies
- 5.5 Assistance is provided to conduct a post-operational inspection
- 5.6 Logbook and other service records on the locomotive are completed in accordance with organisational requirements
- 5.7 Controls are secured in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC3073A Fire a steam locomotive.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC3073 Fire a steam locomotive

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking system and workplace procedures
- assisting with pre-operational activities in accordance with operational procedures
- checking and replenishing fluids and carrying out lubrication requirements on a steam locomotive
- communicating effectively with others when inspecting and preparing a steam locomotive
- completing relevant documentation
- conducting a visual inspection of a steam locomotive and associated equipment
- documenting outcomes of visually inspecting a steam locomotive
- firing a steam locomotive
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- inspecting and operating a steam locomotive boiler in accordance with relevant codes of practice and operational procedures
- interpreting and following instructions and prioritising work
- maintaining steam and water levels in accordance with operating requirements
- preparing a steam locomotive prior to service
- reading, interpreting and following relevant instructions, procedures, information and signs.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- braking and safety system procedures for a steam locomotive
- emergency procedures
- external features of a steam locomotive that must be checked during a pre-operational visual inspection
- functions of auxiliary systems on a motive power unit and related checks for correct operation
- in-cab pre-operational checks for a steam locomotive
- lubrication requirements for a motive power unit
- operating controls to start, accelerate, decelerate and stop a steam locomotive
- principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
- procedures for:
  - checking fuel and fluid levels and carrying out lubrication processes on a steam locomotive
  - identifying equipment defects and assessing appropriate action
  - managing and controlling hazardous situations when preparing and starting up a steam locomotive
  - starting and operating auxiliary systems on a steam locomotive
  - visually inspecting a steam locomotive
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- requirements for completing relevant documentation when inspecting and preparing a steam locomotive
- steam locomotive boiler code of practice
- start-up procedures for a steam locomotive
- workplace procedures and operating requirements.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the rail corridor workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIC3082 Operate a locomotive by portable remote control

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to operate a motive power system by a portable remote control unit in accordance with safeworking and manufacturer instructions, and organisational procedures.

It includes preparing a locomotive, setting up portable remote control equipment, operating the system after set up is complete and shutting it down after operation.

This equipment is used to control a locomotive remotely when loading, unloading and/or shunting trains within defined limits, terminals, yards or sidings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C - Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Set up locomotive for portable remote

1.1 Locomotive is set up for portable remote control operation in accordance with manufacturer instructions and/or

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC3082A Operate a locomotive by portable remote control.

# Assessment Requirements for TLIC3082 Operate a locomotive by portable remote control

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, and information
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- setting up portable remote control equipment in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- braking and safety system procedures
- defined limits
- locomotive operating techniques
- procedures for identifying defects in portable remote control units, and assessing appropriate action to be taken

- procedures for managing hazardous situations involving portable remote control systems
- procedures for operating portable remote control equipment
- relevant rail danger zones
- relevant rail safety, WHS/OHS and environmental procedures and regulations
- relevant workplace operational instructions
- shunting and marshalling procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIC4019 Drive train to operational requirements

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to drive a train to operational requirements in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes applying train management techniques to manage the movement of a train and, as the driver of a motive power unit, to conduct all movements and related activities required to achieve operational requirements. It also includes responding effectively to external factors and emergencies, handing over a train to a relief crew and stabling it at the end of a journey.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment. It involves the application of routine operational principles and procedures when driving trains as part of workplace activities across a variety of operational contexts within the Australian rail systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Drive train efficiently and effectively**

- 1.1 Motive power unit is operated in accordance with relevant codes of practice, workplace procedures and instructions
- 1.2 Motive power unit is operated safely within track/road characteristics and conditions, to minimise wear and fuel use and to avoid damage
- 1.3 Train is driven with due care for passenger comfort and/or condition of freight
- 1.4 Performance of equipment and rolling stock is monitored to maintain optimum running conditions and to identify faults, defects and inefficiencies
- 1.5 Relevant codes of practice, work health and safety (WHS)/occupational health and safety (OHS) and environmental requirements are followed to prevent injury and damage

### **2 Complete train journey in accordance with operational requirements**

- 2.1 Train documentation is received, interpreted and followed
- 2.2 Train is operated in accordance with documentation and procedures
- 2.3 Events and circumstances affecting planned running schedule are communicated to relevant personnel en route
- 2.4 Relevant codes of practice, safeworking and signalling requirements are followed throughout train operations
- 2.5 Network control officer instructions are received, interpreted and applied to ensure safe and effective control of train
- 2.6 Communications are maintained with network control officer and other relevant personnel during train journey in accordance with relevant codes of practice and safeworking systems
- 2.7 Instructions concerning train operation are given to relevant personnel to ensure safe and efficient running

### **3 Respond to changed external operating**

- 3.1 Instructions regarding changed external operating factors are verified, interpreted and followed, in accordance with

- factors** relevant codes of practice, safeworking systems, and organisational policies and procedures, to ensure actions taken are appropriate and safe
- 3.2 Fixed and hand signals, and verbal movement commands are interpreted and followed, in accordance with relevant codes of practice, safeworking systems, and organisational policies and procedures, to ensure actions taken are appropriate and safe
- 3.3 Hazardous situations are recognised and appropriate action is taken to minimise risk to passengers/freight and equipment
- 3.4 Emergency situations are recognised and actions are taken that are appropriate and safe
- 4 Prepare train for crew handover**
- 4.1 Relevant personnel are advised of condition and location of train
- 4.2 Documentation is updated and faults identified en route are reported to relevant personnel in accordance with established policies and procedures
- 4.3 Incidents or unusual occurrences are recorded and reported to relevant personnel in accordance with workplace policies and procedures
- 5 Stable train**
- 5.1 Location for stabling of train is confirmed with relevant personnel
- 5.2 Train is shunted and secured in accordance with directions, workplace procedures and relevant rail regulations
- 5.3 Safety devices are activated or put in position to ensure safety of personnel and equipment

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC4019A Drive train to operational requirements.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIC4019 Drive train to operational requirements

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in trains, associated motive power units and ancillary equipment
- applying track or road information/characteristics to train operations
- checking and replenishing fluids and carrying out lubrication processes as part of train operations in accordance with workplace requirements
- communicating effectively with others
- completing relevant documentation
- driving train in accordance with equipment and track/road characteristics
- identifying and assessing motive power unit defects and deficiencies and taking appropriate action to report, isolate, repair or replace identified defective equipment in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring equipment in accordance with organisational requirements
- monitoring journey schedule in accordance with train documentation
- monitoring train performance and security of load to facilitate optimum safe operation
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- recognising problems that may arise when driving a train, and taking appropriate action
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others

- working systematically with required attention to detail.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- braking and safety system procedures
- defects that can occur on a motive power unit and related action that should be taken
- motive power unit controls, instruments and indicators and their purpose, location and use
- motive power unit equipment and systems including monitoring devices, braking and drive equipment, and ancillary systems
- operating controls to start, accelerate, decelerate and stop
- procedures and required protocol for operating electronic communications equipment
- procedures for identifying equipment faults and defects, and assessing for appropriate action
- procedures for minor maintenance, cleaning, lubricating and servicing of motive power unit
- procedures for operating and monitoring the performance of ancillary systems on a train
- procedures for refuelling and lubricating a motive power unit
- procedures for responding to hazardous situations and emergencies
- processes for adjusting controls to maximise efficient and safe running
- relevant WHS/OHS and environmental procedures and regulations
- requirements for completing relevant documentation
- start-up and shut-down procedures
- techniques and procedures for complying with speed and load limits
- track and road characteristics
- train operating characteristics.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the rail workplace.

A simulator assessment is not suitable for the final assessment of this unit of competency

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# **TLIC4023 Operate train with due consideration of route conditions**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to operate a train with due consideration of route conditions in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes identifying route requirements, applying route knowledge to planning a train journey, and using route knowledge during a train journey in accordance with workplace requirements and standards.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is generally performed without supervision and within a team environment. It involves the application of routine operational principles and procedures when operating a train with due consideration of route conditions as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

C – Vehicle Operation

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Identify and interpret route information**

1.1 Information on anything likely to affect critical aspects of a train route is accessed in accordance with workplace procedures

1.2 Information on critical aspects of a train route is interpreted and analysed for use when planning a train journey and operating a train during a journey

### **2 Apply route knowledge when planning a train journey**

2.1 Route information is applied to planning a train journey in accordance with workplace procedures and safeworking codes of practice and regulations

2.2 Events and circumstances likely to affect planned running schedule are communicated to relevant personnel

2.3 Relevant codes of practice, safeworking and signalling requirements are applied when planning train operations

2.4 Instructions concerning planned train operation are communicated to relevant personnel to ensure safe and efficient on-time running

### **3 Use route knowledge during a train journey**

3.1 Route information is evaluated and applied to managing train operations during a train journey in accordance with workplace procedures and safeworking codes of practice and regulations

3.2 Hazardous situations along train route are recognised and appropriate action is taken to minimise risk to personnel and equipment

3.3 Communications are maintained with Network Control Officer and other relevant personnel during train journey in accordance with relevant codes of practice, safeworking systems and workplace procedures

3.4 Network Control Officer information and other instructions are received, interpreted and applied to ensure safe and effective operation of train

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC4023A Operate train with due consideration of route conditions.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIC4023 Operate train with due consideration of route conditions

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying route knowledge to train operations
- communicating effectively with others including using fixed and hand signals, and train communications equipment
- completing relevant documentation
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring train performance and its security to facilitate optimum safe operation
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading and interpreting relevant instructions, procedures, route information and signs
- reporting and/or rectifying identified problems that may occur promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- braking and safety system procedures
- driving procedures
- motive power unit controls, instruments and indicators and their purpose, location and use
- motive power unit systems and equipment including monitoring devices, braking and drive equipment, ancillary systems and signalling systems
- procedures for adjusting controls to maximise efficient and safe running
- procedures for complying with speed and load limits
- procedures for identifying and/or anticipating route problems and related action that can be taken
- procedures for managing hazardous situations
- procedures for operating ancillary systems
- procedures for operating controls to start, accelerate, decelerate and stop
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- route information including track/bridge limitations, speed limitations, gauge limitation, curves and gradients, curfews, location of signals and crossings, emergency cross-overs, end of safeworking system locations, stations and platforms, abnormal weather conditions along route, track work along route, reports of accidents or breakdowns along route, yard and siding layouts and typical problems that can occur along a train route
- safe operational procedures and techniques for optimising efficiency, minimising wear and tear on rolling stock and motive power units
- workplace procedures and operating requirements.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations

- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIC4026 Operate and monitor a motive power unit

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to operate and monitor a motive power unit in accordance with relevant workplace procedures, rail regulations and codes of practice.

It includes operating motive power unit controls, monitoring performance and maintaining operational condition during a journey. It also includes working collaboratively with other train crew and relevant personnel.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment. It involves the application of routine operational principles and procedures when maintaining the safety and operation of a motive power unit across a variety of operational contexts in the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Operate motive power unit**

- 1.1 Motive power unit handling techniques, and track and road knowledge are applied to eliminate or minimise risk of injury to personnel or damage to equipment, rolling stock and load
- 1.2 Acceleration and braking techniques are applied safely within track, road and weather conditions
- 1.3 Hazards are identified, risks are assessed and risk control measures are implemented
- 1.4 Motive power unit and rolling stock movement between sections is monitored and vehicles are positioned safely in accordance with relevant codes of practice, safeworking systems and related requirements

### **2 Operate and monitor on-board equipment**

- 2.1 Motive power unit equipment is monitored and operated to maintain optimum running conditions and to identify faults, defects and deficiencies
- 2.2 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of motive power unit, including communications with Network Control Officer as required
- 2.3 Faults, defects and deficiencies are assessed to determine risk of damage to equipment or injury to personnel

### **3 Respond effectively to external operating factors**

- 3.1 Instructions are verified as required, interpreted and followed, in accordance with relevant codes of practice, rail regulatory requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe
- 3.2 Fixed and hand signals, and verbal movement commands are interpreted and followed, in accordance with relevant codes of practice, safeworking systems and organisational policies and procedures, to ensure actions taken are appropriate and safe
- 3.3 Hazardous situations are recognised and interpreted and appropriate initiatives and action are taken to minimise risk to personnel and equipment in accordance with workplace procedures and applicable regulatory requirements

### **4 Work collaboratively**

- 4.1 Safe operation and monitoring of motive power unit is maintained in collaboration with relevant personnel, in accordance with workplace procedures and applicable

regulatory requirements

- 4.2 Potential or actual conflicts or grievances with train crew, Network Control Officer and other relevant personnel when operating motive power unit are recognised and resolved, in accordance with workplace procedures
- 4.3 Rail resource management principles are applied as required in all rail operations involving motive power unit, in accordance with workplace procedures
- 4.4 Regular communication is maintained with train crew, Network Control Officer, drivers of other trains and other relevant personnel when operating motive power unit, in accordance with workplace procedures and regulatory requirements
- 4.5 Train crew, Network Control Officer, drivers of other trains and other relevant personnel are advised of operational problems, delays, and safety incident and emergency situations
- 4.6 Information provided by train crew, Network Control Officer, drivers of other trains and other relevant personnel relevant to ongoing operation of motive power unit is interpreted and applied to driving activities, in accordance with workplace procedures and applicable regulatory requirements

**5 Follow all applicable rail regulatory requirements**

- 5.1 Rail regulatory requirements applicable to operating motive power unit, and train and track or road concerned are accessed, clarified as required and interpreted
- 5.2 Relevant rail regulatory requirements are applied and followed when operating motive power unit
- 5.3 Rail resource management principles are applied in all rail operations involving motive power unit in accordance with workplace procedures and applicable rail regulatory requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC4026A Operate and monitor a motive power unit.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIC4026 Operate and monitor a motive power unit

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in motive power units and associated equipment and procedures
- applying handling techniques and track and road knowledge in accordance with workplace procedures
- communicating effectively and maintaining appropriate levels of communication with appropriate personnel
- completing relevant documentation
- identifying and responding different types of signals, including fixed and hand signals and verbal commands
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring motive power unit performance
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- recognising problems that may arise when operating and monitoring a motive power unit, and taking appropriate action
- reporting problems and carrying out repairs (depending on level and extent of work required), or isolating and tagging faulty equipment and advising appropriate personnel of fault and need for repair or replacement
- selecting and using required personal protective clothing and equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- braking and safety system procedures
- emergency procedures
- motive power unit controls, instruments and indicators and their purpose, location and use
- operating controls to start, accelerate, decelerate and stop a motive power unit
- procedures and required protocol for operating electronic communications equipment
- procedures for adjusting controls to maximise efficient and safe running
- procedures for identifying equipment defects and assessing them for appropriate action
- procedures for managing safety incidents and hazardous situations
- procedures for minor maintenance, cleaning, lubricating and servicing a motive power unit
- procedures for operating and monitoring a motive power unit
- procedures for operating and monitoring ancillary equipment on a motive power unit
- relevant rail danger zones
- relevant safeworking systems
- relevant WHS/OHS and environmental procedures and regulations
- requirements for communicating and working collaboratively with relevant personnel
- requirements for completing relevant documentation during and after operating and monitoring a motive power unit
- speed and load limits for a motive power unit
- track and road
- train schedules, motive power unit allocation and operational instructions
- typical faults that can occur on a motive power unit and related action that should be taken for repair, isolation, replacement, reporting and recording of the faulty equipment
- workplace procedures and operating requirements.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the rail corridor

workplace.

A simulator assessment is not suitable for the final assessment of this unit of competency

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIC4071 Establish and operate train braking system

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to identify, establish and operate a train braking system after it has been marshalled and deals with brake system faults and failures.

It includes identifying and operating train braking system, and locating and rectifying or isolating system faults during operation in accordance with organisational procedures.

This unit covers activities carried out in a rail yard or on a main line.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Identify and establish train braking system

1.1 Brake system and type to be used are identified

1.2 Confirmation is made that motive power unit is

appropriate for braking system to be used

1.3 Correct coupling of braking system to motive power unit is established and/or confirmed in accordance with organisational policies and requirements

1.4 Air brake system is charged to required pressures in accordance with manufacturer requirements and tolerances

## **2 Operate and monitor train braking system**

2.1 Relevant brake system tests are conducted in accordance with organisational policies and requirements

2.2 Hazards are identified, risks are assessed and risk control measures are implemented

2.3 Train brakes are applied and released under normal operational conditions in accordance with correct train handling and organisational policies and procedures

2.4 Train brake system is monitored in accordance with organisational and/or operational requirements

## **3 Identify and rectify train braking system faults during operation**

3.1 Train braking system faults are identified during operation

3.2 Safe location to bring train to a stand is identified in accordance with train handling and organisational policies and procedures

3.3 Train brake system fault is located and rectified or isolated in accordance with manufacturer and/or organisational procedures

3.4 Relevant brake system tests are conducted in accordance with organisational policies and requirements

3.5 Train is operated in accordance with organisational procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC4071A Establish and operate train braking system.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC4071 Establish and operate train braking system

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant rail safety practices and workplace procedures
- assessing brake system defects
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- interpreting capabilities of train braking systems
- modifying activities depending on operational contingencies, risk situations and environments
- modifying driving in accordance with brake capabilities and characteristics
- operating and adapting to differences in brakes and related equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and organisational procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- brake systems, their components and their operation
- capabilities and characteristics of train braking systems
- diagnostic techniques
- pneumatic systems and their operations
- releasing train brakes after emergency application in accordance with organisational policies and procedures
- relevant environmental protection legislation, regulations, codes of practice, policies and procedures
- relevant information and documents
- relevant state/territory legislated rail safety requirements, rail industry standards, rules, codes of practice and/or guidelines
- relevant WHS/OHS legislation, regulations, codes of practice, policies and procedures
- tools and equipment applications
- types of brake tests and their purpose.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# **TLIC4072 Operate and monitor a motive power unit on a main line**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to operate and monitor a motive power unit on a main line in accordance with safeworking requirements, network owner and/or organisational policies and procedures.

It includes driving, monitoring and controlling train running and responding to changing operating factors on a railway main line. It also includes stabling or handing over a motive power unit in accordance with organisational requirements.

This unit can be applied to single motive power units or multiple consist freight, heavy haul or passenger trains.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

C – Vehicle Operation

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Drive and monitor train**

- 1.1 Motive power unit is operated in accordance with manufacturer instructions, and organisational policies and procedures
- 1.2 Motive power unit is operated safely with consideration of train consist and loading to minimise wear and fuel use, and to avoid damage
- 1.3 Motive power unit handling techniques, and track and road knowledge are applied to eliminate or minimise risk of injury to personnel or damage to equipment, rolling stock and load
- 1.4 Hazards are identified, risks are assessed and risk control measures are implemented
- 1.5 Equipment and rolling stock are monitored to maintain optimum running conditions and to identify faults, defects and inefficiencies
- 1.6 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of motive power unit

### **2 Control and monitor train running**

- 2.1 Events and circumstances affecting planned running schedule are communicated to relevant personnel in accordance with organisational policies and procedures
- 2.2 Instructions received from network control officer, are interpreted and applied to ensure safe and effective control of train
- 2.3 Communications are maintained with relevant personnel during train journey in accordance with relevant safeworking systems, network requirements, and organisational policies and procedures
- 2.4 Instructions concerning train operation are given to relevant personnel to ensure safe and efficient running

### **3 Respond to changed operating factors**

- 3.1 Instructions regarding changed operating factors are confirmed, interpreted and followed, in accordance with safeworking systems, network owner requirements, and organisational policies and procedures
- 3.2 Temporary signs and/or signals, hand signals and verbal movement commands are interpreted and followed, in accordance with safeworking systems, network owner requirements, and organisational policies and procedures

- 3.3 Hazardous situations are recognised and appropriate action is taken to minimise risk to passengers/freight and equipment
- 3.4 Emergency situations are recognised and actions are taken in accordance with safeworking systems, network owner requirements, and organisational policies and procedures

#### **4 Stable or handover train**

- 4.1 Train is stabled in accordance with safeworking system requirements, operational instructions and organisational procedures
- 4.2 Safety devices are activated or put in position in accordance with organisational policies and procedures
- 4.3 Prior to stabling/handover, documentation relevant to train and activities undertaken en route is updated and provided to relief crew or completed and forwarded to appropriate personnel, in accordance with organisational policies and procedures
- 4.4 Prior to stabling/handover, relevant housekeeping activities are completed in accordance with organisational policies and procedures
- 4.5 Relevant personnel are advised of condition and location of train in accordance with organisational policies and procedures
- 4.6 Incidents or unusual occurrences are recorded and reported to relevant personnel in accordance with organisational policies and procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIC4072A Operate and monitor a motive power unit on a main line.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIC4072 Operate and monitor a motive power unit on a main line

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others
- identifying and assessing motive power unit defects and deficiencies and taking appropriate action to report, isolate, repair or replace identified defective equipment in accordance with organisational procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating and monitoring a motive power unit on a main line
- reading and interpreting instructions, procedures and information relevant to train operations
- selecting and using relevant equipment and materials
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate motive power unit and rolling stock systems
- emergency workplace procedures
- problems that can occur with train operations and action that should be taken
- procedures for fixed and hand signalling, and voice communication
- relevant documents
- relevant environmental protection legislation, regulations and procedures
- relevant legislated rail safety requirements, codes of practice and/or guidelines
- relevant WHS/OHS legislation, regulations and procedures
- safeworking systems and requirements.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations on a railway main line.

A simulator assessment is not suitable for the final assessment of this unit of competency

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIC4073 Set up, operate and shut down a distributed power system

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to set up, operate and shut down a distributed power system in accordance with organisational procedures, relevant codes of practice and rail industry standards.

It includes setting up a remote control system; setting up a lead control system; and operating, monitoring and shutting down a distributed power system.

Distributed power refers to the physical distribution, at intermediate points throughout the length of a train, of separate motive power units. Such motive power units may be single units or multiple consists, remotely-controlled from the lead locomotive.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Prepare train for set up of distributed power system**
  - 1.1 Distributed motive power units are positioned as required in train consist
  - 1.2 Hazards are identified, risks are assessed and risk control measures are implemented
  - 1.3 Train sections are marshalled to form one train as required
- 2 Set up remote distributed motive power units**
  - 2.1 Distributed power is set up on all remote units
  - 2.2 Distributed power system is tested in accordance with manufacturer instructions and/or organisational policies and procedures ready for linking with lead control unit
  - 2.3 Start-up procedures for remote distributed motive power units are followed in accordance with manufacturer instructions and/or organisational policies and procedures
- 3 Set up lead distributed motive power units**
  - 3.1 Distributed power system is set up by conditioning/activation of required systems
  - 3.2 Distributed power system is tested in accordance with manufacturer instructions and/or organisational policies and procedures
  - 3.3 Start-up procedures for lead distributed motive power unit are followed in accordance with manufacturer instructions and/or organisational policies and procedures
  - 3.4 Full control of distributed motive power units is established after linking process has been completed and required function tests have been conducted
- 4 Operate and monitor distributed power train**
  - 4.1 Distributed power system is operated and monitored during train operation to ensure safe train handling and control in accordance with operational requirements
  - 4.2 Operational difficulties/faults are identified and rectified ensuring operational safety and efficiency
  - 4.3 Shut-down procedures for distributed motive power units are followed in accordance with manufacturer instructions and/or organisational policies and procedures
- 5 Shut down distributed power systems**
  - 5.1 Distributed power train is secured against movement as required prior to system shut down
  - 5.2 Shut-down procedures for distributed motive power units are followed in accordance with manufacturer instructions and/or

organisational policies and procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIC4073A Set up, operate and shut down a distributed power system.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIC4073 Set up, operate and shut down a distributed power system

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- monitoring equipment performance
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and organisational procedures
- setting up, operating and shutting down a distributed power system.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- controls, instruments and indicators of a distributed power system and their purpose, location and use
- critical distributed power system control information including compatible coupling, braking, drive equipment and ancillary systems
- manufacturer instructions for distributed power units
- procedures for identifying equipment defects in distributed power system and assessing identified defective units for appropriate action
- procedures for managing hazardous situations involving distributed power system
- relevant distributed power system documents
- relevant applicable state/territory legislated rail safety requirements, codes of practice and/or guidelines

- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, regulations, codes, policies and procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIC4074 Shunt, couple and uncouple rail vehicles

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to safely shunt rail vehicles in accordance with safeworking and organisational, policies and procedures.

It includes preparing to shunt rail vehicles for loading/unloading, making up or breaking up trains and placing vehicles for operational and/or maintenance purposes. It also includes coupling, uncoupling and securing rail vehicles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

C – Vehicle Operation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Prepare to shunt** 1.1 Shunting instructions are interpreted and confirmed

**rail vehicles**

- 1.2 Location of rail vehicles and required movements are identified
- 1.3 Hazards are identified, risks are assessed and risk control measures are implemented
- 1.4 Allocated motive power unit is confirmed as appropriate for intended activities

**2 Shunt rail vehicles**

- 2.1 Points, levers, switches and signals are operated as required, in accordance with organisational policies and procedures to control rail vehicle movement
- 2.2 Uniform line of sight and radio shunting commands are used in accordance with organisational policies, procedures and requirements
- 2.3 Rail vehicles are positioned in accordance with operational requirements
- 2.4 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are followed to prevent injury and to avoid damage to equipment
- 2.5 Defect/fault cards are checked and appropriate action is taken in accordance with organisational policies and procedures as required
- 2.6 Rail vehicle movements are controlled to prevent damage of rail vehicles and loads/contents in accordance with organisational policies and procedures

**3 Couple, uncouple and secure rail vehicles**

- 3.1 Rail vehicles are positioned to meet coupling requirements in accordance with organisational policies and procedures
- 3.2 Coupling systems are identified and applied appropriately to couple and/or uncouple rail vehicles in accordance with manufacturer and organisational requirements
- 3.3 Handbrakes and other securing devices are applied/released and attached/removed in accordance with organisational policies and procedures

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIC4074A Shunt, couple and uncouple rail vehicles.

## **Links**

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIC4074 Shunt, couple and uncouple rail vehicles

# TLID1001 Shift materials safely using manual handling methods

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to shift loads safely using manual handling methods. Work must be carried out in compliance with the relevant work health and safety (WHS)/occupational health and safety (OHS) regulations concerning the manual handling and movement of loads.

It includes assessing the risks associated with relocating the load, planning the relocation process and carrying out the relocation in accordance with the plan.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

D – Load Handling

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Assess risks associated with

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1.1 Products, goods or materials to be relocated are identified and assessed to determine appropriate relocation method

**relocating load**

- 1.2 Storage locations are determined and potential routes to be followed are identified
- 1.3 Effect of load relocation on original load base is predicted
- 1.4 Points of balance are estimated
- 1.5 Required clearances are compared to available space and adjustments are made to moving loads to reflect required clearance
- 1.6 Effects of moving contents, which may be loose, liquid, dangerous or hazardous, are considered
- 1.7 Risks in potential routes are considered
- 1.8 Risks to self are identified arising from the required lifting, load carrying, set down or movement of the goods
- 1.9 Manual handling procedures for lifting, lowering and carrying, pushing and pulling are identified
- 1.10 Team lifting processes are considered when moving loads
- 1.11 Appropriate personal protective equipment is determined
- 1.12 Size to weight ratio of items to be manually handled are identified

**2 Plan load relocation**

- 2.1 Relocation of the load is planned, consistent with the code of practice for manual handling and in accordance with the risk assessment
- 2.2 Process for relocating load is proposed including predicting and planning for potential difficulties
- 2.3 Proposed process is checked for compliance with code of practice and workplace procedures

**3 Relocate load**

- 3.1 Actions for lifting, lowering and carrying, pulling and pushing a load are in accordance with workplace procedures and WHS/OHS requirements
- 3.2 Applications appropriate for team relocation of load are identified
- 3.3 Team lifting tasks are coordinated
- 3.4 Planned process and route are followed

- 3.5 Relocated materials are set down without damage to goods, personnel or equipment and are checked for stability
- 3.6 Relocation is checked to see it meets work requirements and variance/s are reported

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLID1001A Shift materials safely using manual handling methods.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLID1001 Shift materials safely using manual handling methods

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate risks that may exist when manually lifting and handling materials and goods
- applying relevant legislation and workplace procedures
- communicating effectively with others when manually lifting and handling materials and goods
- implementing contingency plans when manually lifting and handling, materials and goods
- interpreting and following operational instructions and prioritising work
- interpreting manual handling risks
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in loads and materials in accordance with standard operating procedures
- reading and interpreting instructions, procedures and information relevant to the manual lifting and handling of materials and goods
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- using correct manual handling practices
- working collaboratively with others when manually lifting and handling materials and goods
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- housekeeping standards and procedures
- relevant WHS/OHS procedures and guidelines concerning the manual lifting and movement of loads
- risks when manually lifting and handling materials and goods, and related precautions to control the risk, including:
  - controlled actions on a movement during lifting
  - distance over which load is to be shifted
  - frequency of shifting operations
  - load on the spine during lifting
  - postures and positions during lifting
  - rotation and side movement of the spine during lifting
  - time allowed for shifting the load
  - type, weight and position of the load
  - work layout
  - site layout and obstacles
  - workplace procedures and policies for manual handling.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice

and operation manuals.

# TLID1002 Shift a load using manually-operated equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to shift loads using manually-operated mechanical equipment in compliance with the relevant work health and safety (WHS)/occupational health and safety (OHS) regulation within the transport and logistics industry.

It includes assessing the risks associated with relocating the load, planning the relocation process, carrying out the relocation with the aid of the equipment in accordance with the plan and refurbishing the equipment and worksite.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Assess risks

1.1 Products, goods or materials to be relocated are identified and

**associated with  
relocating load**

assessed for the appropriate relocation method

- 1.2 Storage location is determined
- 1.3 Routes to be followed are identified
- 1.4 Points of balance are estimated
- 1.5 Effect of moving contents, which may be loose, liquid, dangerous or hazardous, are considered
- 1.6 Risks in potential route/s are considered
- 1.7 Lifting equipment to minimise potential risks is identified
- 1.8 Appropriate personal protective equipment is determined and worn
- 1.9 Tools, load shifting equipment and other materials are selected and checked for serviceability and defects are reported to supervisor

**2 Plan load relocation**

- 2.1 Load is examined to determine condition, length, bulk and weight
- 2.2 Load shifting equipment is selected in accordance with workplace procedures
- 2.3 Safe procedures for using lifting equipment are identified, including the calculation of safe working load (SWL) and/or working load limit (WLL) for weight of goods to be moved
- 2.4 Process for relocating load is proposed including predicting and planning for potential difficulties
- 2.5 Proposed process is checked against relevant code of practice and workplace procedures for compliance
- 2.6 Lifting equipment and accessories are checked for safe operation in accordance with manufacturer's instructions and workplace procedures
- 2.7 Personal protective equipment is selected and worn in accordance with WHS/OHS requirements

**3 Relocate load**

- 3.1 Unsafe equipment is reported to appropriate personnel in accordance with workplace procedures
- 3.2 Load is broken down, where applicable, to allow handling and moving a number of single items to ensure the maximum

weight of 500 kg is not exceeded

- 3.3 Mechanical aids and field machines are constructed, when required, by the approved shifting method, so the load can be shifted in accordance with job instructions
- 3.4 Safe working limits for lifting equipment are identified and maintained
- 3.5 Planned process and route are followed using equipment within necessary range of limitations
- 3.6 Relocated materials are set down without damage to goods, personnel or equipment and are checked for stability
- 3.7 Relocation is checked to see it meets work requirements and variances are reported

#### **4 Refurbish equipment and worksite**

- 4.1 Site is cleaned and cleared of debris and unwanted material
- 4.2 Field machines, tools and equipment are cleaned, inspected, serviced, maintained and stored in accordance with standard procedures
- 4.3 Documentation is completed in accordance with standard procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLID1002A Shift a load using manually-operated equipment.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLID1002 Shift a load using manually-operated equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist when shifting loads using manually-operated equipment
- communicating and working effectively with others when using manually-operated equipment to shift loads
- completing documentation related to work activities
- identifying load limits for lifting
- identifying manual operating equipment and their capabilities
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading and interpreting instructions, procedures, information and signs relevant to shifting loads using manually-operated equipment
- relocating a load safely
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- housekeeping standards and procedures
- method for splicing and maintaining cordage and SWL
- problems that may arise when using manually-operated equipment to shift loads, and actions that should be taken to prevent or solve these problems
- relevant knots and lashings
- relevant WHS/OHS procedures and guidelines concerning the use of manually-operated equipment to shift loads
- relevant slings and securing devices
- risks when using manually-operated equipment to shift loads, and related precautions to control these risks
- site layout and obstacles
- workplace procedures and policies for shifting goods and materials using manually-operated equipment.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

## **TLID2010 Operate a forklift**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to operate a forklift in compliance with the relevant state/territory authority licence requirements and regulations, in a variety of operational contexts.

It includes checking forklift condition, driving forklift to fulfil operational requirements, and monitoring and maintaining forklift performance and site conditions.

Assessment of this unit will usually be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory work health and safety (WHS)/occupational health and safety (OHS) authority.

Operation of a forklift is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

D – Load Handling

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Check forklift condition**

- 1.1 Condition of forklift is checked for compliance with WHS/OHS and workplace requirements for warning devices, manufacturer specifications and nature of load shifting task
- 1.2 Attachments are checked to ensure appropriate adjustment and operation
- 1.3 Mirrors and seats are adjusted for safe operation by driver
- 1.4 Logbooks are checked and appropriate workplace documentation is completed in accordance with workplace requirements

### **2 Drive forklift**

- 2.1 Forklift is started, steered, manoeuvred, positioned and stopped in accordance with regulations and manufacturer instructions
- 2.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage
- 2.3 Operational hazards are identified and/or anticipated and avoided or controlled through defensive driving and appropriate hazard control techniques
- 2.4 Forklift is driven in reverse, maintaining visibility and achieving accurate positioning
- 2.5 Forklift is parked, shut down and secured in accordance with manufacturer specifications, regulations and workplace procedures

### **3 Operate forklift to handle loads**

- 3.1 Lifting task to be undertaken is appropriately planned, and correct lifting truck and attachments are selected
- 3.2 Load is lifted, carried, lowered and set down in accordance with WHS/OHS legislation, manufacturer specifications and company procedures

### **4 Monitor site conditions**

- 4.1 Hazards and traffic flow are identified when selecting the most efficient route and appropriate adjustments are made
- 4.2 Site conditions are assessed to enable safe operations and to ensure no injury to people or damage to property, equipment, loads or facilities occurs

## **5 Monitor and maintain forklift performance**

- 5.1 Performance and efficiency of vehicle operation is monitored during use
- 5.2 Defective/irregular performance and malfunctions are reported to relevant personnel
- 5.3 Forklift records are maintained/updated in accordance with workplace procedures and legislative requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLID2010A Operate a forklift.

## **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLID2010 Operate a forklift

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking and replenishing fluids, and carrying out lubrication processes
- communicating and working effectively with others
- completing relevant documentation
- ensuring forklift and its equipment are maintained in terms of service schedule and standard operating procedures
- identifying points of balance and safe lifting positions on a range of loads when operating a forklift (including accessories)
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of forklift and its equipment, and taking appropriate action as required
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- efficient driving techniques
- engine power management and safe operating strategies
- forklift controls, instruments and indicators, and their use
- forklift handling procedures
- high risk work licence requirements
- operating hazards and related defensive driving and hazard control techniques
- operational emergency procedures
- pre-operational checks carried out on forklift and related action
- principles of stress management when driving a forklift
- relevant duty of care requirements for operating a forklift
- relevant WHS/OHS and environmental procedures and regulations
- site layout and obstacles
- workplace operating procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLID3033 Operate a vehicle-mounted loading crane

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to operate a vehicle-mounted loading crane to shift loads with a capacity of less than 10 metre tonnes.

It includes positioning and stabilising a vehicle-mounted crane, operating a vehicle-mounted crane, monitoring lift conditions, packing up a vehicle-mounted crane after operations, and completing all required job records.

Work must be carried out in accordance with the relevant state/territory authority licence/permit requirements and regulations pertaining to vehicle-mounted loading cranes.

Work is performed under general supervision. It involves the application of routine principles and procedures when operating a vehicle-mounted loading crane in a variety of operational contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Not applicable.

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Position and stabilise vehicle-mounted crane**

- 1.1 Crane is driven to position as specified in job plan to ensure safe operation in accordance with applicable Australian standards, codes of practice, manufacturer specifications, and relevant regulatory and local government requirements
- 1.2 Barriers, fencing, temporary boundaries and signage are used as required to isolate working area in accordance with safe working practice and lift requirements
- 1.3 Ground is checked to ensure it is firm enough to bear load to be taken
- 1.4 Appropriate plates or packing are correctly used to adequately distribute load
- 1.5 Outriggers and stabilisers are correctly deployed and positioned in accordance with manufacturer instructions, appropriate Australian standard and other relevant statutory regulations or local authority requirements
- 1.6 Outrigger packing is checked for adequacy prior to and after load is taken

### **2 Operate vehicle-mounted crane**

- 2.1 Planned hazard control strategies are implemented
- 2.2 Required signals are correctly given, interpreted and followed in accordance with appropriate Australian standards
- 2.3 Load mass is assessed and correlated with crane lifting capacity throughout proposed radii of operation
- 2.4 Appropriate lifting gear is selected and load is secured
- 2.5 Load is hoisted and lowered into position using crane movements in accordance with appropriate Australian standard
- 2.6 Crane controls are operated smoothly
- 2.7 Crane is shut down and secured during periods of non-operation in accordance with manufacturer specifications and workplace procedures

### **3 Monitor lift conditions**

- 3.1 Load is constantly monitored to ensure load and structural stability

- 3.2 Conditions that may affect continuing stability of crane are identified and monitored
- 3.3 Unplanned situations are responded to in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- 3.4 Advice is sought from supervisor where there is doubt about correct response to unanticipated conditions or conflict with customer request
- 3.5 Supervisor/allocator is advised of concerns about completing job within timeframe
- 3.6 Shut-down procedures are implemented in an emergency in accordance with manufacturer instructions
- 3.7 Relevant motion locks and brakes are applied
- 3.8 Crane is shut down using correct sequence of procedures in accordance with manufacturer specifications and workplace procedures
- 3.9 Routine post-operational equipment checks are carried out in accordance with manufacturer specifications

#### **4 Pack up vehicle-mounted crane**

- 4.1 All lifting equipment and crane components are checked for any signs of deterioration or damage in accordance with the appropriate Australian standard
- 4.2 Damaged or worn equipment is segregated and reported to an authorised person for testing/repair/destruction
- 4.3 Crane equipment is correctly stowed and secured in accordance with manufacturer instructions and the appropriate Australian standard
- 4.4 Crane is immobilised and secured for travel in accordance with manufacturer instructions, workplace guidelines and regulatory requirements

#### **5 Complete job records**

- 5.1 Customer feedback is sought regarding satisfaction with completed job and areas of concern are reported in accordance with workplace procedures
- 5.2 Customer signature is obtained on job completion documentation
- 5.3 Required workplace records are updated accurately and promptly, and processed in accordance with workplace

procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLID3033A Operate a vehicle-mounted loading crane.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLID3033 Operate a vehicle-mounted loading crane

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying fatigue management knowledge and techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- checking and replenishing fluids, and carrying out lubrication processes
- communicating effectively with others
- completing relevant documentation
- interpreting and following operational instructions and prioritising work
- monitoring performance of crane and its equipment, and taking appropriate action as required
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of relevant agreements, codes of practice and other legislative requirements
- hazard management that is consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
- high risk work licence requirements
- mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- operational procedures for crane crews
- operational work procedures concerning setting up and rigging a mobile crane at a worksite
- operational work systems and equipment
- prioritising and multi-tasking work
- problems that may arise when operating a vehicle-mounted loading crane and actions that should be taken to prevent or solve these problems
- relevant WHS/OHS and environmental procedures and regulations
- relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Operate a vehicle-mounted loading crane with a capacity of less than 10 metre tonnes.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLID4008 Monitor crane operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to monitor crane operations in accordance with workplace procedures and regulatory requirements, as part of work activities in the stevedoring, transport, distribution and allied industries

It includes monitoring work performance and progress, monitoring personnel working in operational areas, solving problems concerning crane operations and making decisions.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

D – Load Handling

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Monitor work performance and progress

1.1 Work is performed in accordance with workplace requirements and objectives to ensure safe work practices are maintained in accordance with statutory authority regulations, national and industry safety codes and workplace procedures

- 1.2 Crane operations and compliance with operational procedures are monitored regularly and refined in consultation with supervisor, crane drivers and other employees
  - 1.3 Work performance rates are maintained and delays are minimised to ensure work program objectives are met
  - 1.4 Safety in the work area is continually monitored during crane operations and required action is taken to identify hazards and to control risks
- 2 Monitor personnel working in operational area**
- 2.1 Vigilance is maintained when personnel are working in the cranes operational area in accordance with statutory requirements, national standards and safety codes
  - 2.2 Personnel are checked out of operational area before securing operational area/storage location/ships hold after completing shift and when task is completed, ensuring all personnel are safely out of the area/hold
  - 2.3 Personnel working in the operational area/storage location/ships hold are warned of any danger in accordance with workplace procedures and regulatory requirements
  - 2.4 Personnel working in the operational area/storage location/ships hold are alerted when required and emergency responses are initiated to provide assistance to personnel in hold
- 3 Solve problems and make decisions**
- 3.1 Problems are solved and decisions are made to ensure optimum efficiency of operations in accordance with management and client objectives
  - 3.2 Employees are encouraged to contribute their opinions to facilitate effective decisions and resolution of problems

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLID4008A Monitor crane operations.

## **Links**

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLID4008 Monitor crane operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying basic fatigue management techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others when monitoring crane operations
- completing relevant documentation
- dealing with internal and external customers in small, medium and large worksites
- estimating the size, shape and special requirements of loads
- identifying, selecting and using relevant equipment, processes and procedures when monitoring crane operations
- identifying cargo, container and goods, coding, Australian Dangerous Goods (ADG) and International Maritime Dangerous Goods (IMDG) markings and emergency information panels
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading and interpreting relevant instructions, procedures, information, labels and signs
- receiving, acknowledging, sending messages and giving signals using required communications equipment and protocols
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and

- work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others when monitoring crane operations
  - working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and international codes and regulations relevant to crane operations, including the ADG and IMDG Codes
- cargo marking and numbering systems
- operational work systems, equipment, management and site operating systems for crane operations
- problems that may occur during crane operations and appropriate action that can be taken to resolve these problems
- relevant bond, quarantine or other legislative requirements
- relevant handling and safety codes
- relevant WHS/OHS and environmental protection procedures and guidelines
- requirements for safe working load (SWL) and working load limit (WLL) of cranes
- types of cargo including goods with specialist requirements, temperature controlled goods and dangerous goods
- types of cranes used to transfer loads at transport, rail or shipping terminals or wharves, their application and the regulations, procedures and precautions for their operation
- workplace procedures and policies for monitoring crane operations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of

assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions including limited or restricted spaces, exposed conditions, controlled or open environments.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry, including
  - gloves
  - safety headwear and footwear
  - safety glasses
  - two-way radios
  - protective clothing
  - high visibility clothing
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

## TLID4009 Direct crane operations

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to direct crane operations in accordance with workplace and regulatory requirements, as part of work activities in the stevedoring, transport, distribution and allied industries.

It includes checking work area, checking cargo, receiving and interpreting directions, anticipating cargo transfer sequence, directing crane operators and transferring loads in accordance with job requirements.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

D – Load Handling

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Check work area

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work area is checked to ensure area is in accordance with relevant safety codes and national standards

- 1.2 Unsafe work areas are identified and reported to appropriate personnel
- 2 Check cargo**
  - 2.1 Cargo/containers are checked to ensure they are safe to handle in accordance with national standards and industry safety codes
  - 2.2 Unsafe or damaged cargo is identified and reported to appropriate personnel
- 3 Interpret and provide directions**
  - 3.1 Directions are provided using the required communications technology/mode
  - 3.2 Directions are confirmed to ensure any unclear instructions are checked and clarified with relevant staff
- 4 Anticipate cargo transfer sequence**
  - 4.1 Cargo transfer sequence is anticipated to ensure compliance with operating procedures and safe and efficient transfer operations
  - 4.2 Cargo sequence is anticipated by referral to ship stowage plans/required sheets
- 5 Direct crane operators and transfer loads**
  - 5.1 Crane operators are directed to work locations to ensure cargo/containers are transferred in accordance with workplace procedures and regulatory requirements
  - 5.2 Crane drivers are immediately alerted to unsafe conditions, safety incidents and emergencies in accordance with workplace procedures and regulatory requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLID4009A Direct crane operations.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLID4009 Direct crane operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying basic fatigue management techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others when directing crane operations
- completing relevant documentation
- dealing with internal and external customers in small, medium and large worksites
- estimating the size, shape and special requirements of loads
- identifying cargo, container and goods, coding, Australian Dangerous Goods (ADG) and International Maritime Dangerous Goods (IMDG) markings and emergency information panels
- identifying, selecting and using relevant equipment, processes and procedures
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading and interpreting relevant instructions, procedures, information, labels and signs
- receiving, acknowledging, sending messages and giving signals using required communications equipment and protocols while directing crane operations
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using appropriate personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others when directing crane operations

- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and international codes and regulations relevant to crane operations, including the ADG and IMDG Codes
- cargo marking and numbering systems
- focus of operation of work systems, equipment, management and site operating systems for crane operations
- problems that may occur during crane operations and appropriate action that can be taken to resolve these problems
- relevant bond, quarantine or other legislative requirements
- relevant handling and safety codes
- relevant WHS/OHS and environmental protection procedures and guidelines required
- requirements for safe working load (SWL) and working load limit (WLL) of cranes
- types of cranes used to transfer loads at transport, rail or shipping terminals or wharves, their application and the regulations, procedures and precautions for their operation
- workplace procedures and policies for directing crane operations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions including limited or restricted spaces, exposed

conditions, controlled or open environments.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry, including
  - gloves
  - safety headwear and footwear
  - safety glasses
  - two-way radios
  - protective clothing
  - high visibility clothing
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## TLID4030 Supervise mobile crane operations

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to supervise mobile crane operations, in compliance with the licence/permit to perform high risk work requirements and relevant state/territory regulations for mobile crane operations.

It includes implementing the operational plan for a mobile crane lift, directing operations, supporting crane personnel in their work, and negotiating and resolving site problems on request.

Work is performed under general supervision. It involves the application of some judgement and routine principles and procedures when supervising mobile crane operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

D – Load Handling

### Unit Sector

Not applicable.

### Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Implement operational plan**
  - 1.1 Checks are made that customer has fulfilled agreed obligations and required personnel and equipment are on site
  - 1.2 Plan is implemented in accordance with legislative and workplace requirements
  - 1.3 Check is made that hazards have been identified and hazard control strategies implemented
- 2 Direct operations**
  - 2.1 Customer is kept advised of changes to operation method and concerns are addressed promptly
  - 2.2 Crane personnel are encouraged to provide input to the operation
  - 2.3 Options for unexpected situations are developed and discussed with site and crane personnel
  - 2.4 Emergency situations are responded to in line with workplace procedures in a manner that minimises risk to personnel and equipment
  - 2.5 Responsibilities of crane personnel are clarified throughout operation
  - 2.6 Crane personnel are coordinated and directed to ensure safe and efficient operation
- 3 Support crane personnel**
  - 3.1 Assistance with rigging/operating duties is provided as required in accordance with legislative and site requirements
  - 3.2 Additional equipment and personnel are arranged as necessary in line with legislative requirements
  - 3.3 Facilities and amenities are arranged as necessary
- 4 Resolve site problems on request**
  - 4.1 Where feasible, problem is clarified prior to site visit to enable prioritising of work
  - 4.2 Problem is assessed through on-site consultation with crane personnel
  - 4.3 Customer's perspective on the problem is sought as required
  - 4.4 Decision is made regarding appropriate solutions to problems, taking into account safety and workplace requirements, and customer expectations
  - 4.5 Action to be taken is agreed with crane personnel and

customer

- 4.6 Agreed commitments are met in a timely manner and undertakings of others are followed up to ensure personnel and customer satisfaction with the outcome
- 4.7 Workplace records are updated accurately, legibly and promptly as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLID4030A Supervise mobile crane operations.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLID4030 Supervise mobile crane operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking and workplace procedures
- calculating safe working load (SWL) and working load limit (WLL)
- communicating effectively with others
- completing documentation related supervising mobile crane operations
- discussing and negotiating with clients and crew on issues related to site access, setting up the crane and lift operations
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying and directing the use of equipment, processes and procedures
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment and operating environment in accordance with operating procedures
- planning and guiding the work of others, including predicting consequences and identifying improvements
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- consultation and communication risk mitigation workplace procedures
- emergency management workplace procedures
- focus of operation of work systems and equipment
- how to calculate total mass of the load (including the mass of the lifting gear) and its distribution
- mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- operational procedures for crane crews
- prioritising and multi-tasking work
- problems that may arise when supervising mobile crane operations and actions that should be taken to prevent or solve these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant rigging operations code of practice and regulations
- relevant road rules, high risk work regulations, permits and high risk licence requirements pertaining to mobile crane operation
- SWL and WLL of mobile crane and lifting gear
- workplace procedures for supervising mobile crane operations at a worksite.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including high risk workplace procedures, regulations, codes of practice and operation manuals.

## TLIE1003 Participate in basic workplace communication

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to participate effectively in basic workplace communication as an integral part of routine work in the context of the workplace concerned.

It includes communicating information about routine tasks, processes, events or skills; participating in group discussions to achieve appropriate work outcomes; and representing group views to others.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

E – Communication and Calculation

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Communicate information about** 1.1 Appropriate form of communication is selected

- routine tasks, processes, events or skills** and used to meet required purpose
- 1.2 Effective listening skills are used
  - 1.3 Questions are used to gain additional information and to clarify understanding
  - 1.4 Sources of information relevant to communication are identified
  - 1.5 Information is selected and sequenced correctly
  - 1.6 Verbal and written reporting is undertaken as required
  - 1.7 Communication is undertaken in familiar and unfamiliar situations, and with familiar and unfamiliar individuals and groups
- 2 Participate in group discussions to achieve appropriate work outcomes**
- 2.1 Responses are sought from and ideas are shared with others in the group
  - 2.2 Constructive contributions are made in terms of the process involved
  - 2.3 Goals or outcomes are communicated and/or recorded
- 3 Represent group views to others**
- 3.1 Group views and opinions are interpreted and clarified as required
  - 3.2 Context of and reasons for representing group views to others are confirmed and explained
  - 3.3 Groups views and opinions are accurately reflected in representation to others

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIE1003A Participate in basic workplace communication.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIE1003 Participate in basic workplace communication

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others when completing basic work activities
- completing relevant documentation
- modifying communication activities depending on operational contingencies and environments
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures and information
- reporting and/or rectifying identified problems in communication promptly, in accordance with workplace procedures
- responding appropriately to cultural preferences in the workplace, including modes of behaviour and interactions with others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic communication techniques including barriers to effective communication and how to overcome them
- basic principles of effective communication
- protocols and procedures for communicating with others using relevant workplace technology
- relevant procedures and duty of care requirements
- techniques for communicating effectively with people whose first language is not English

- techniques for communicating effectively with people whose understanding of English is limited
- typical communication problems and appropriate action and solutions.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

## **TLIE1005 Carry out basic workplace calculations**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to carry out basic routine workplace calculations.

It includes carrying out required mathematical operations; preparing basic estimates of mass, size and volume; and interpreting basic graphical representations of mathematical information. It also includes calculations for routine industry-related tasks using manual and electronic processes.

It specifically includes the skills and knowledge needed to estimate/calculate manual load shifting requirements. Calculations are carried out as an integral part of routine work in the context of the workplace concerned.

Work is performed under some supervision, generally within a team environment.

Work involves the application of established mathematical principles and techniques in day-to-day work activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

E – Communication and calculation

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Carry out calculations

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Items are counted singly and in batches, and sorted numerically as required

1.2 Calculations needed to complete work tasks are performed using the four basic processes of addition, subtraction, multiplication and division

1.3 Calculations involving fractions, percentages and mixed numbers, along with using the four basic processes, are performed as required

1.4 Calculator, numeric keypad or computer are used to perform workplace tasks

1.5 Numerical information is self-checked and corrected for accuracy

#### 2 Prepare estimates

2.1 Quantities of materials and resources required to complete a work task are estimated

2.2 Time needed to complete a work activity is estimated

2.3 Accurate estimates for work completion are made

#### 3 Interpret graphical representations of mathematical information

3.1 Information represented in symbols, diagrams and pictorial representations is recognised

3.2 Recognised information represented in symbols, diagrams and pictorial representations is interpreted and acted upon

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIE1005A Carry out basic workplace calculations.

## Links

# Assessment Requirements for TLIE1005 Carry out basic workplace calculations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- carrying out basic calculations as they relate to the job role
- completing documentation related to work activities
- identifying the most common forms of calculations as they relate to the job role
- interpreting graphical representations of mathematical information
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading and interpreting instructions, procedures and information relevant to basic workplace calculations
- working systematically with required attention to detail.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic mathematical operations and techniques
- procedures for identifying and using relevant workplace technology when carrying out workplace calculations
- relevant procedures and duty of care requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) responsibilities
- typical mathematical problems, and appropriate action and solutions
- ways of representing basic mathematical information.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

## TLIE2001 Present routine workplace information

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to present routine workplace information in accordance with workplace requirements as part of work activities in the transport and logistics industry.

It includes preparing and presenting routine workplace documents as well as preparing and delivering oral presentations.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

E – Communication and Calculation

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Prepare and present documents

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Purpose of the document is identified
- 1.2 Information sources are established

- 1.3 Information is collated and presented in a logical order
  - 1.4 Document style is selected to match purpose and workplace pro-formas
  - 1.5 Clear and concise language is used to convey appropriate information to target audience
  - 1.6 Document is checked to ensure it follows workplace requirements
  - 1.7 Completed document is presented to appropriate personnel as required
- 2 Prepare and deliver oral presentations**
- 2.1 Purpose of oral presentation is established
  - 2.2 Target audience is identified
  - 2.3 Information is gathered and sorted
  - 2.4 Visual, audio and physical support media are identified or developed, if required, in accordance with workplace procedures
  - 2.5 Presentation is trialled and adjusted to suit target audience
  - 2.6 Information is presented in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIE2001A Present routine workplace information.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIE2001 Present routine workplace information

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others when preparing and presenting routine workplace information
- completing documentation related to preparing and presenting routine workplace information
- identifying, selecting and using relevant equipment, processes and procedures when preparing and presenting routine workplace information
- modifying activities depending on operational contingencies and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading, interpreting and following instructions, procedures and information relevant to preparing and presenting routine workplace information
- receiving, acknowledging and sending messages with available communications equipment
- using computer software presentation packages for slides, overhead projector, computer presentations
- working systematically with required attention to detail.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documents, forms and oral presentations required as part of routine workplace activities
- problems that may occur when preparing and presenting routine workplace information and appropriate action that can be taken to resolve these problems
- operational work systems, equipment, management and site operating systems for preparing and presenting routine workplace information
- workplace procedures and policies for preparing and presenting routine workplace information.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

## TLIE2007 Use communications systems

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to use communications systems in accordance with relevant regulations and workplace procedures.

It includes identifying system features, operating a communications system effectively, using appropriate communications system protocols, maintaining equipment and completing documentation.

It involves applying established communication principles and practices, and using local technical, colloquial language and vocabulary in day-to-day communication.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

E – Communication and Calculation

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Check communications system requirements**
  - 1.1 System features and control functions are identified
  - 1.2 Impact of battery and signal levels on system's capability is determined
  - 1.3 Mobile equipment is set up to optimise communication
  - 1.4 Channels are selected appropriate to the communication as required
  
- 2 Communicate using communications technology**
  - 2.1 System checks are carried out to confirm communications system is operational, in accordance with manufacturer's instructions and workplace procedures
  - 2.2 Communications system is operated safely in accordance with manufacturer's instructions, workplace procedures and regulatory requirements
  - 2.3 Telephone and radio security is maintained in accordance with workplace procedures
  - 2.4 Channel selection is appropriate for the location and type of communication
  - 2.5 Messages are transmitted clearly and precisely, and user ethics and protocols are followed
  - 2.6 Public address (PA) system is used to communicate with passengers and crew in accordance with standard operating procedures
  - 2.7 Incoming messages are received and answered promptly and courteously in accordance with operating procedures and regulatory requirements
  - 2.8 Appropriate language, protocols, procedures and codes are followed when using communications systems
  - 2.9 Received messages are interpreted and recorded in accordance with workplace procedures
  - 2.10 Clear and unambiguous vocal communication is used
  
- 3 Maintain communications equipment operational status**
  - 3.1 Equipment is checked and maintained in working order in accordance with workplace procedures
  - 3.2 Minor communications systems faults are promptly identified, diagnosed, and repaired or reported in

accordance with workplace procedures

- 4 Complete documentation**
- 4.1 Appropriate communications records are maintained in accordance with workplace procedures
  - 4.2 Communications records are stored/filed as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIE2007A Use communication systems.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIE2007 Use communications systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist when using communications systems
- communicating and working effectively with others using available communications systems
- completing documentation related to work activities when using communications systems
- following communications security procedures
- identifying and using required communications technology
- implementing contingency plans
- modifying activities depending on differing operational contingencies, risk situations and environments
- monitoring communications equipment performance and taking appropriate action as required
- planning, monitoring and prioritising work activities in terms of planned schedule, including predicting consequences and identifying improvements
- operating and adapting to differences in communications equipment in accordance with standard operating procedures
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- reading, interpreting and following communications systems instructions, procedures and relevant legislation
- using communications equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic communication techniques including barriers to effective communication and how to overcome them
- basic principles of effective communication
- features of various communications systems
- minor routine maintenance procedures for communications equipment
- pre-operational checks for communications systems and equipment
- procedures and protocols for using communications systems during an emergency
- protocols and procedures for communicating with others using relevant communications technology including PA systems
- relevant work health and safety work health and safety (WHS)/occupational health and safety (OHS) responsibilities
- relevant procedures and duty of care requirements
- typical problems that may occur when using communications systems, and appropriate action and solutions.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

## TLIE2008 Process workplace documentation

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to process workplace documentation in accordance with workplace requirements. Processing documentation is carried out as an integral part of work operations in the context of the workplace concerned.

It includes planning and completing documentation to fulfil an identified purpose.

Work may be performed in team and autonomous working situations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

E – Communication and Calculation

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Plan documentation

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Purpose of workplace documentation is identified and confirmed

1.2 Information for completing workplace documentation is

collected, interpreted, analysed and organised as required

## **2 Complete documentation**

- 2.1 Required documentation is prepared and/or forms are completed, in accordance with workplace policies and procedures
- 2.2 Information is entered into computer-based documents, as required
- 2.3 Logs or diaries are maintained accurately and in a timely manner, in accordance with workplace requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIE2008A Process workplace documentation.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIE2008 Process workplace documentation

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- completing workplace documentation, forms, logs or diaries
- operating and adapting to differences in computing equipment in accordance with standard operating procedures
- reading, interpreting and organising information needed for completing and processing workplace documentation, forms, logs or diaries
- working collaboratively with others when completing and processing workplace documentation, forms, logs or diaries
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- writing and/or entering information into computer-based documentation systems.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- protocols and procedures for processing workplace documentation using relevant workplace technology
- purpose of workplace documentation, forms, logs or diaries
- relevant work health and safety (WHS)/occupational health and safety (OHS) responsibilities
- relevant procedures and duty of care requirements
- requirements for workplace documentation, forms, logs or diaries
- sources of information for completing workplace documentation, forms, logs or diaries
- typical problems in processing workplace documentation and appropriate action and

solutions.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

## TLIE2029 Conduct workplace information briefings

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to conduct workplace information briefings in accordance with organisational requirements.

It includes preparing and delivering workplace briefings, and completing routine workplace documents as part of routine work.

Work is performed under some supervision generally in a team environment. This unit applies to formal types of briefings such as pre-work briefs, pre-start briefs, toolbox talks, worksite protection briefs and safe work method statement safety briefings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

E – Communication and Calculation

### Unit Sector

Not applicable.

### Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Prepare briefing**
  - 1.1 Purpose of the brief and target audience are identified
  - 1.2 Sources of information are identified and accessed
  - 1.3 Information is collected and prepared for presentation in a logical order
  - 1.4 Briefing style is selected to match purpose and organisational guidelines
  - 1.5 Information is checked to ensure it is concise and appropriate for target audience
  - 1.6 Hazards are identified, risks are assessed and control measures are implemented
  - 1.7 Documents to be issued are checked to ensure they meet organisational requirements
- 2 Deliver briefing**
  - 2.1 Purpose of briefing is conveyed to audience
  - 2.2 Information is presented in accordance with organisational procedures
  - 2.3 Information is delivered clearly and concisely
  - 2.4 Appropriate questioning techniques are used to confirm understanding
- 3 Complete documentation**
  - 3.1 Required documentation procedures and processes are confirmed
  - 3.2 Documentation is filled in legibly and proofread
  - 3.3 Documentation is processed in accordance with organisational policies and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIE2029A Conduct workplace information briefings.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIE2029 Conduct workplace information briefings

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- communicating effectively with others
- identifying job hazards and documenting required actions to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies and environments
- preparing and delivering workplace briefings and completing routine workplace documents
- reading and interpreting relevant instructions, procedures and information
- reporting and rectifying issues promptly, in accordance with regulatory requirements and organisational procedures
- working collaboratively with others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communication barriers and how to deal with them
- documents, forms and presentations required for workplace information briefings
- effective communication techniques, such as open and closed questioning, active listening and positive body language
- organisational procedures and policies for preparing and presenting workplace information briefings
- problems that may occur when preparing and presenting workplace information briefings, and action that can be taken to resolve these problems.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant consultation and communication exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable consultation documentation including workplace procedures, regulations, codes of practice and operation manuals.

# **TLIE2031 Use communication systems for on-track vehicle operations**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to use communication systems for on-track vehicle operations.

It includes identifying systems features, communicating using communications technology, maintaining communications equipment and completing documentation.

This unit involves the application of established communication principles and practice, and the use of local technical and colloquial language and vocabulary, in accordance with network owner communications protocols.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

E – Communication and Calculation

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Confirm communication systems features**
  - 1.1 Available communication systems are identified
  - 1.2 Features and control functions of each system are identified
  - 1.3 Battery and signal levels are monitored as required
  - 1.4 Hazards are identified, risks are assessed and control measures are implemented
  - 1.5 Channels are selected as required, appropriate to the types of communications to be made
- 2 Communicate using communications technology**
  - 2.1 Systems checks are carried out to confirm communications system is operational, in accordance with manufacturer instructions and organisational/network owner procedures
  - 2.2 Communications system is operated safely in accordance with manufacturer instructions, workplace procedures and regulatory requirements
  - 2.3 Channel selection is made as required, appropriate for the location and type of communication
  - 2.4 Appropriate protocols and procedures are followed when using communication systems
  - 2.5 Received messages are interpreted and recorded, as required, in accordance with organisational/network owners procedures
- 3 Maintain communications equipment**
  - 3.1 Equipment is checked and serviced as required to keep it in good working order, in accordance with workplace procedures
  - 3.2 Minor faults in communications systems are identified, diagnosed and repaired or reported, in accordance with workplace procedures
- 4 Complete documentation**
  - 4.1 Required communication records are confirmed
  - 4.2 Communication records are filled out legibly and proofread
  - 4.3 Communication records are processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIE2031A Use communication systems for on-track vehicle operations.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIE2031 Use communication systems for on-track vehicle operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- communicating effectively with others using available communications systems
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying and using required communications equipment and technology
- monitoring performance of communications equipment and taking appropriate action as required
- operating and adapting to differences in communications equipment in accordance with operating procedures
- reading and interpreting relevant instructions and procedures
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic principles of effective communication
- communications protocols
- communications security
- hazards that may exist when using communications systems for on-track vehicle operation and ways of controlling the risks involved
- organisational procedures for using communications systems for on-track vehicle operation
- problems that may occur when using communications systems for on-track vehicle operation and action that can be taken to report or resolve these problems

- relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace communications procedures, regulations, rules, codes of practice and operation manuals.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

## **TLIE3002 Estimate/calculate mass, area and quantify dimensions**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to estimate and calculate mass, area and quantify dimensions of loads in accordance with workplace requirements and relevant regulations, as part of work functions within the transport and logistics industry.

It includes estimating loads to be transported or placed in storage, estimating load limits of transport and/or storage systems, and organising a load.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

E – Communication and Calculation

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Estimate loads for transport or storage**
  - 1.1 Order forms/work orders are read and requirements are noted
  - 1.2 Shape, balance characteristics, dimensions and mass of load/s are identified
  - 1.3 Area/volume required for storage is estimated
  - 1.4 Weights and volumes are totalled to calculate load requirements of transport or storage system
- 2 Estimate load limits of transport and/or storage**
  - 2.1 Allowable load limits for storage and/or transport systems are identified in accordance with workplace procedures
  - 2.2 Capacity of transport and storage systems in terms of mass, area and volume is calculated
- 3 Organise load**
  - 3.1 Load/s is restricted to allowable range
  - 3.2 Load/s is spread to ensure safe weighting on pallets, trucks, platforms or other storage or transport systems
  - 3.3 Appropriate workplace documentation is completed

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIE3002A Estimate/calculate mass, area and quantify dimensions.

## Links

Companion Volume implementation guides are found in VETNet -

## Assessment Requirements for TLIE3002 Estimate/calculate mass, area and quantify dimensions

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others
- identifying, selecting and using relevant calculators, computing and office equipment
- interpreting and following operational instructions and prioritising work
- performing basic mathematical operations required when estimating and/or calculating mass, area and volumes of loads and transport/storage facilities including addition, subtraction, multiplication and division
- reading and interpreting relevant instructions, procedures, information and labels
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

### Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and international codes and regulations relevant to workplace activities
- documentation requirements for the workplace activities concerned
- focus of operation of work systems, equipment, management and site operating systems for transporting and/or storing goods and stock
- problems that may occur when estimating and/or calculating mass, area and volumes of loads and transport/storage facilities, and appropriate action that can be taken to resolve these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines

- workplace procedures and policies for estimating and/or calculating mass, area and volumes of loads, and transport and storage facilities, including the quantification of dimensions.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

# TLIE3015 Undertake rigger/dogger and driver communication

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to enable effective communication between riggers or doggers and drivers, and to lift and move loads using slewing and non-slewing mobile cranes up to and including 20 tonnes, in a variety of operational contexts.

It includes establishing an agreed communications system, trialling and configuring communications and communicating effectively during a lift.

Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to operations of mobile cranes up to and including 20 tonnes.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

E – Communication and Calculation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

**1 Establish agreed communications system**

1.1 Forms of signals/communication conforming to Australian Standards and codes of practice are identified

1.2 Hazards are identified, risks are assessed and control measures are implemented

1.3 Communication methods to be used in crane operations are agreed with relevant personnel

**2 Trial and configure communications**

2.1 Communication is trialled, adjusted and/or confirmed as required to ensure a safe and effective lift

2.2 Communications equipment is checked for correct operation and configured in line with legislative and workplace requirements

2.3 Defective equipment is tagged, rejected and reported to authorised personnel for corrective action

2.4 Signals/communications are given both within sight and out of sight of crane operator

**3 Communicate effectively during a lift**

3.1 Communication methods and communications systems are used during a lift in accordance with regulatory requirements, manufacturer instructions and workplace procedures

3.2 Problems identified during communication are reported and immediate action is initiated in accordance with workplace procedures and regulatory requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIE3015 Undertake rigger/dogger and driver communication

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others during a lift
- identifying and correctly using equipment, processes and procedures
- interpreting and following operational instructions and prioritising work
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- planning own work including predicting consequences and identifying improvements
- prioritising and multi-tasking work
- reading and interpreting relevant instructions, procedures, regulations, information and signals
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others during a lift
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications systems used during a lift
- methods used to signal movement of the load during a lift
- mobile crane applications, capacities, configurations, safety hazards and control measures
- problems that may occur when communicating during a lift and associated action that can be taken to address these problems concerned
- relevant road rules, regulations, permit and licence requirements for mobile crane operations
- risks and hazards involved in mobile crane operations and associated action that can be taken to eliminate or minimise the risk
- workplace procedures and statutory regulations concerning communication between a rigger or dogger and a mobile crane driver before and during a lift.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

## **TLIE3021 Work and communicate effectively with others**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to work and communicate effectively with others in accordance with relevant regulations and workplace procedures.

It includes communicating effectively to achieve required outcomes, working with others, communicating using technology, operating a communications system effectively, using appropriate communications protocols when using a system, and maintaining operational status of communications equipment.

Work is performed under some supervision, generally within a team environment. It involves the application of established communications principles and practice.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

E – Communication and Calculation

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Communicate effectively to achieve required work outcomes**

- 1.1 Effective listening skills are applied
- 1.2 Questions are used to gain additional information and to clarify understanding
- 1.3 Information received is clarified as required, interpreted and accurately communicated and/or reported in accordance with communications protocols and workplace procedures
- 1.4 Communication is undertaken in varying situations and with familiar and unfamiliar individuals and groups
- 1.5 Appropriate protocols and procedures are followed when using communications systems during emergencies
- 1.6 Responses are sought and provided to others in a timely manner

**2 Work with others**

- 2.1 Forms of communication appropriate to the activity are used
- 2.2 Assistance in completing activities is requested as required
- 2.3 Contributions to achieving a required outcome are made
- 2.4 Work is undertaken in accordance with specified procedures on an individual and shared basis as required
- 2.5 Problems are discussed and resolved where possible through agreed and accepted processes
- 2.6 Suggestions for improvements to processes are made and discussed within the team in accordance with workplace procedures

**3 Communicate using technology**

- 3.1 Communications system features and control functions are identified
- 3.2 Appropriate equipment is selected as fit for purpose for intended communication
- 3.3 Hazards are identified, risks are assessed and risk control measures are implemented
- 3.4 Equipment is optimised for communication in

- accordance with organisational procedures and policies
- 3.5 Equipment is operated safely in accordance with manufacturer instructions, workplace procedures and regulatory requirements
- 4 Operate communications systems**
- 4.1 Telephone and radio security is maintained in accordance with workplace procedures
- 4.2 Channel selection is made appropriate to location and type of communication
- 4.3 Communications systems are used to communicate with passengers and crew as required, in accordance with operating procedures
- 5 Maintain operational status of communications equipment**
- 5.1 Equipment is checked and maintained in working order in accordance with workplace procedures
- 5.2 Minor communications equipment faults are promptly identified, diagnosed, and repaired or reported in accordance with workplace procedures
- 5.3 Faulty communications equipment is reported and/or recorded in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIE3021 Work and communicate effectively with others

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- communicating effectively in different workplace situations and when using communications equipment
- contributing actively to achieving workplace outcomes
- identifying and using required communications technology in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating, adapting to, and monitoring communications equipment and taking appropriate action as required, in accordance with operational procedures
- planning own communication style and identifying improvements
- reading and interpreting relevant instructions and procedures
- reporting and/or recording and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- working systematically with required attention to detail without damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications techniques including barriers to effective communication and how to overcome them
- features of various communications systems
- instructions, procedures, information and signs relevant to working with others as a team
- minor routine maintenance procedures for communications equipment
- pre-operational checks for communications systems and equipment
- procedures for promptly reporting and/or rectifying identified misunderstandings and problems, and appropriate ways of dealing with them in accordance with workplace procedures
- protocols and procedures for communicating with others using relevant communications technology
- relevant work health and safety (WHS)/occupational health and safety (OHS) responsibilities
- techniques for communicating effectively with customers with specific needs
- typical problems that may occur when using communications systems, and appropriate action and solutions.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## TLIE3022 Complete workplace documents

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to collect, prepare, analyse and process workplace documents in accordance with workplace requirements. It includes collecting, preparing, analysing and interpreting information, and completing documents.

Documents are completed as an integral part of routine work in the context of the workplace concerned.

Work is performed under minimal supervision, generally in a team environment.

Work involves the application of established communications principles and practices, and may include using local technical language and vocabulary in documents.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

E – Communication and Calculation

### Unit Sector

### Elements and Performance Criteria

Elements describe the                      Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

### **1 Collect and prepare information**

- 1.1 Purpose and audience for document are identified
- 1.2 Appropriate document format is identified to meet organisational requirements
- 1.3 Relevant information is collected for inclusion in document
- 1.4 Active listening skills are applied when collecting information
- 1.5 Questioning techniques are used to gain additional information and to clarify understanding

### **2 Interpret and analyse information**

- 2.1 Relevant information is interpreted, analysed and collated as required for inclusion in document
- 2.2 Draft is prepared as required in accordance with organisational procedures

### **3 Finalise workplace documents**

- 3.1 Document is completed in accordance with organisational policies and procedures
- 3.2 Document is edited and a final version appropriate to identified communication purpose is presented

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIE3022A Complete workplace documents.

# Assessment Requirements for TLIE3022 Complete workplace documents

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying methods of analysis and interpretation for workplace documents
- applying relevant workplace procedures
- collecting relevant information for inclusion in workplace documentation
- reading and interpreting relevant instructions, procedures and information
- reporting and rectifying identified problems
- working systematically with required attention to detail.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications techniques, including active listening and effective questioning
- format and layout of documents and forms used in workplace activities
- issues that may occur when preparing and completing workplace documents, and action that can be taken to resolve them
- methods used to analyse and interpret information to be included in workplace documents and forms
- organisational procedures and policies for completing workplace documents and forms.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include

requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## **TLIE3023 Use electronic communication systems**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to use electronic communications systems in accordance with relevant regulations and workplace procedures.

It involves the application of established communication principles and practices and the use of local technical and colloquial language and vocabulary in day-to-day communication.

It includes identifying system features, operating a communications system effectively, using appropriate communication protocols when using a system, ensuring equipment is operational, identifying any system access requirements and completing documentation.

Work is performed under some supervision, generally in a team environment.

This unit covers activities where a number of different communications systems are used concurrently including radios, fixed-line and mobile telephones, and computers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

E – Communication and Calculation

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |   |   |
|---|---|
| <b>1 Apply WHS/OHS principles</b>                                 | <p>1.1 Information about work health and safety (WHS)/occupational health and safety (OHS) requirements when using electronic communications equipment is accessed and interpreted</p> <p>1.2 Hazards are identified, risks are assessed and control measures are implemented</p> <p>1.3 Posture and ergonomic settings of chair and workstation are adjusted in accordance with WHS/OHS guidelines</p> <p>1.4 WHS/OHS and organisational guidelines on the use of periods of rest and exercise are followed when using electronic communications equipment</p> |
| <b>2 Identify electronic communications equipment and systems</b> | <p>2.1 Types of electronic communications equipment, component parts and accessories used in work area are identified</p> <p>2.2 Applications for workplace activities of different electronic communications systems and, as required, related software, are interpreted</p> <p>2.3 Routine faults in operating systems, software applications and operator errors are identified and reported, as required</p>  |
| <b>3 Identify communications equipment features</b>               | <p>3.1 Electronic communications systems features and control functions are identified</p> <p>3.2 Electronic communications equipment is set up to optimise communication</p> <p>3.3 Appropriate communications system is selected, as required</p>   |
| <b>4 Enter data</b>   | <p>4.1 Text and numeric data are entered into communications system using appropriate technology, as required</p> <p>4.2 Entered information is checked and corrected, as required</p>  |
| <b>5 Use communications equipment</b>                             | <p>5.1 System checks are carried out to confirm communications system is operational in accordance with organisational requirements</p> <p>5.2 Communications system is operated safely in accordance with organisational procedures and regulatory requirements</p>  |

- 5.3 Communications system security is maintained in accordance with organisational procedures
  - 5.4 Communications system appropriate for location and type of communication is selected, as required
  - 5.5 Messages are transmitted clearly, unambiguously and precisely in accordance with ethics and protocols required of users as outlined in organisational procedures
  - 5.6 Messages are received, interpreted and recorded in accordance with operating procedures and regulatory requirements
- 6 Complete documentation**
- 6.1 Appropriate communications records are maintained in accordance with organisational procedures
  - 6.2 Documentation is filled in legibly and proofread
  - 6.3 Documentation is processed in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIE3023A Use electronic communication systems.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIE3023 Use electronic communication systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate potential work health and safety (WHS)/occupational health and safety (OHS) hazards when using communications equipment
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing documentation related to work activities
- identifying and reporting problems, faults and malfunctions, in accordance with workplace procedures
- identifying and using required communications technology
- prioritising communication activities depending on operational contingencies, risk situations and environments
- using appropriate numeric functions when entering data into a computer system.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications techniques, including barriers to effective communication
- features of various communications systems
- problems that can occur when using communications systems and associated corrective actions
- procedures and protocols for using communications systems during an emergency
- procedures for using communications systems
- protocols and procedures for communicating with others using relevant communications technology

- WHS/OHS risks and hazards when using communications systems.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIE4006 Collect, analyse and present workplace data and information

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to collect, analyse and present workplace data and information as part of workplace operations.

It includes identifying required information, analysing and preparing information for use, explaining information and presenting workplace information to others.

Work is performed under general or limited supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

E – Communication and Calculation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Collect required data

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Purpose of data and information collection is confirmed

- and information**
- 1.2 Sources of data and information are established
  - 1.3 Appropriate data and information is identified
- 2 Prepare data and information for use**
- 2.1 Data and information is collated and analysed in accordance with workplace procedures
  - 2.2 Data and information are organised and presented in a logical manner
  - 2.3 Checks for accuracy are made
- 3 Explain information**
- 3.1 Data and information collection and analysis is explained to others in a way that effectively contributes to workplace operations
  - 3.2 Outcomes of data and information analysis are presented to others using appropriate presentation modes and resources
  - 3.3 Questions are answered and appropriate clarification is given
- 4 Present workplace information**
- 4.1 Information is processed and forwarded to appropriate personnel in accordance with workplace procedures
  - 4.2 Processed information is collated and stored in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIE4006A Collect, analyse and present workplace data and information.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIE4006 Collect, analyse and present workplace data and information

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others when collecting, analysing and presenting workplace data and information
- completing relevant documentation
- identifying and using required communications and presentation technology
- monitoring and prioritising work activities in terms of planned schedule
- planning own work including predicting consequences and identifying improvements
- reading, interpreting and following relevant instructions and procedures
- working systematically with required attention to detail.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- presentation and communication techniques including barriers to effective communication and how to overcome them
- principles of effective presentation and communication of information
- protocols and procedures for the collection, analysis and presentation of workplace data and information using relevant technology
- relevant procedures and duty of care requirements
- sources of data and information and procedures for processing the information for workplace use
- typical presentation and communications problems, and appropriate action and solutions.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIE4030 Prepare rail safety reports

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to prepare rail safety reports to meet legislative, regulatory and organisational requirements.

It includes collecting, interpreting and evaluating information, composing a rail safety report and editing it prior to submission.

Rail safety reports may be required to meet rail safety national law, regulatory and organisational requirements. They would typically include safety performance reports, regulatory reporting, incident reports and safety system audit reports.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

E – Communication and Calculation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                               |   |
|-------------------------------|---|
| <b>1 Identify rail safety</b> | 1.1 Reasons for and requirements of rail safety report are identified and established procedures for specific types of report are |
|-------------------------------|---|

- report needs** followed
- 1.2 Target audience for report is identified and appropriate style of recording and reporting is chosen to meet audience needs
- 1.3 Timeframe for delivery of report is identified and met
- 2 Collect and analyse information**
- 2.1 Information is sourced from inside and outside the organisation in accordance with organisational and legislative requirements
- 2.2 Information is validated to ensure accuracy, relevance, sufficiency and currency
- 2.3 Collected information is analysed and recorded in accordance with organisational requirements and identified report requirements
- 3 Record information**
- 3.1 Collected information is recorded and reported in required format, style, structure and timeframe
- 3.2 Technology available in the workplace is used to store and retrieve data
- 3.3 Appropriate measures are taken to ensure all written material complies with legislative requirements and organisational policies and procedures
- 4 Compose rail safety reports**
- 4.1 Rail safety report purpose, objectives and format are determined in accordance with organisational and regulatory requirements
- 4.2 Sourced information is collated in a logical manner and assessed for relevance and inclusion
- 4.3 Content, structure and sequencing of materials are determined in line with purpose and intended audience
- 4.4 Actions and/or recommendations are included as required
- 4.5 Rail safety report is compiled and reviewed to confirm objectives, and organisational and legislative requirements
- 4.6 Rail safety report is completed within agreed timeframes
- 5 Edit final report**
- 5.1 Content of final report is checked and proofread for grammar, spelling and punctuation
- 5.2 Information is amended as required, and final report is authorised in accordance with organisational policy and procedures prior to submission

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIE4030A Prepare rail safety reports.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIE4030 Prepare rail safety reports

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adjusting written communication to suit audience and situation
- applying appropriate written communication techniques
- applying relevant legislation and workplace procedures
- checking and confirming accuracy and validity of information
- collecting and analysing data
- handling and storing information securely and safely, with an awareness of environmental and sustainable practices
- making conclusions that are clearly based on evidence
- presenting written material in a range of media types used in the workplace
- reading, analysing and interpreting documents containing required information
- recording complete, accurate, clear and objective information
- sorting information into a logical pattern
- writing and editing a rail safety report.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislative requirements and safety reporting obligations
- barriers to effective communication
- format and layout of documents and forms used in workplace rail safety reports
- industry terminology used in rail safety sectors
- organisational report writing procedures, guidelines and requirements
- protocols and procedures for meeting regulator and organisational requirements in written communications

- security, freedom and confidentiality of information
- workplace procedures and instructions for notifiable occurrence reports.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## **TLIE4032 Use internal communication systems for rail industry regulatory compliance**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to use internal communication systems for rail industry regulatory compliance.

It includes identifying regulatory compliance requirements, disseminating information, updating systems and managing data.

This unit covers identifying relevant information related to safety management and disseminating the information to the appropriate personnel.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

E – Communication and Calculation

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Confirm regulatory compliance requirements**
  - 1.1 Regulatory compliance information is received and analysed for relevance and importance
  - 1.2 Relevant personnel to whom the information is to be communicated are determined in accordance with regulatory and/or organisational requirements
  - 1.3 Data is formatted into suitable media prior to disseminating information as required
- 2 Disseminate information**
  - 2.1 Method/s of communication is determined in accordance with regulatory and/or organisational requirements
  - 2.2 Regulatory compliance information is disseminated promptly and, where applicable, receipt of information is confirmed and stored/managed in accordance with organisational requirements
- 3 Update systems and manage data**
  - 3.1 Organisational systems affected by regulatory compliance information are identified and updated in accordance with regulatory and/or organisational requirements
  - 3.2 Regulatory compliance information is filed or stored in accordance with regulatory and/or organisational document control procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIE4032A Use internal communication systems for rail industry regulatory compliance.

## Links

# Assessment Requirements for TLIE4032 Use internal communication systems for rail industry regulatory compliance

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others verbally and in writing
- identifying and using media available for disseminating information
- identifying rail industry regulatory compliance requirements
- identifying regulatory compliance information storage methods
- reading and interpreting relevant instructions, procedures and information
- using appropriate media to disseminate information
- working collaboratively with others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- data management systems
- organisational risk management systems
- organisational systems available for information communication and dissemination
- rail safety national law and regulatory requirements related to rail safety management system (SMS)
- regulatory compliance information
- requirements of organisational systems including SMSs, risk management plans and risk registers
- workplace procedures and instructions for notifiable occurrence reports.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# **TLIE4033 Use communications systems to control tram/light rail operations**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to use radio systems to control tram/light rail operations.

It includes identifying equipment types and features, using communications equipment and responding to requests.

This unit covers activities where a number of different communications systems are used concurrently, including radios, fixed-line and mobile telephones and computers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

E – Communication and Calculation

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Identify communications equipment systems and features**

- 1.1 Types of communications equipment, component parts and accessories used in the work area are identified
- 1.2 Applications for workplace activities of the different communications systems and related software are interpreted as required
- 1.3 Communications system features and control functions are identified
- 1.4 Hazards are identified, risks are assessed and control measures are implemented
- 1.5 Appropriate communications system is selected depending on type of communication to be made

**2 Use communications equipment systems**

- 2.1 System checks are carried out prior to operations to confirm communications system is operational, in accordance with organisational requirements
- 2.2 Communications systems are operated safely in accordance with organisational procedures and regulatory requirements
- 2.3 Communications system security is maintained in accordance with organisational procedures
- 2.4 Messages are received, interpreted and recorded in accordance with operating procedures and regulatory requirements
- 2.5 Text and numeric data are entered into communications system using appropriate technology as required
- 2.6 Entered information is checked and corrected as required

**3 Receive and respond to requests**

- 3.1 Details of the situation are established using effective communication skills, techniques and resources, in accordance with organisational procedures
- 3.2 Communication difficulties are acknowledge and efforts are made to overcome these difficulties
- 3.3 Complete details of request are accurately recorded in a timely and efficient manner, in accordance with organisational procedures
- 3.4 Urgency of request is determined using information

gained from person making the request

3.5 Suitable response is formulated in accordance with organisational procedures

3.6 Request is referred in accordance with situation presented and organisational procedures

3.7 Requests are answered promptly in accordance with organisational procedures

3.8 Requests are dealt with in a professional manner at all times

3.9 Appropriate follow-up action is taken, in accordance with needs of the situation and organisational procedures

#### **4 Respond to communications system faults**

4.1 Communications system technical faults are identified and appropriate action is taken

4.2 Back-up or alternative systems are utilised when primary system fails or as required

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIE4033A Use communications systems to control tram/light rail operations.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIE4033 Use communications systems to control tram/light rail operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others using available communications equipment
- completing relevant documentation
- identifying and reporting problems, faults or malfunctions
- identifying and using required communications technology
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- prioritising communications activities depending on operational contingencies, risk situations and environments
- terminating calls in accordance with organisational procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications systems features
- effective communication techniques including barriers to communication and how to overcome them
- manufacturer specifications for communications equipment
- problems that can occur when using communications systems and corrective actions
- procedures and protocols for communicating with others
- procedures and protocols for using communications systems during an emergency
- procedures for using communications systems in the workplace
- relevant sections of legislated rail safety requirements, codes of practice and/or guidelines
- work health and safety (WHS)/occupational health and safety (OHS) risks and hazards

when using communications systems

- workplace communication procedures, protocols, checklists and instructions
- workplace communication records.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate tram/light rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIF0001 Apply chain of responsibility legislation, regulations and workplace procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to identify, apply and follow chain of responsibility legislation, regulations and workplace procedures in relation to heavy vehicles as they apply to an individual's own job role.

It includes explaining the chain of responsibility features, applying the requirements, and identifying and reporting breaches in the Heavy Vehicle National Law (HVNL) and regulations or applicable state/territory law and regulations.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Explain the chain of responsibility features in the Heavy Vehicle National Law and regulations or applicable state/territory law and regulations**

- 1.1 Principal obligations within chain of responsibility in the Heavy Vehicle National Law (HVNL) and regulations or applicable state/territory law and regulations are identified
- 1.2 Principal duties of each party in the chain of responsibility as outlined in the HVNL and regulations or applicable state/territory law and regulations are explained
- 1.3 Breaches and penalties for each party for failure to comply with chain of responsibility as identified in the HVNL and regulations or applicable state/territory law and regulations are explained
- 1.4 Reasonable steps to be followed by each party to comply with chain of responsibility as outlined in the HVNL and regulations or applicable state/territory law and regulations are explained

**2 Apply chain of responsibility requirements in the Heavy Vehicle National Law and regulations or applicable state/territory law and regulations**

- 2.1 Workplace policies, procedures and other documents that include chain of responsibility as it applies to own job role are identified and explained
- 2.2 Methods and requirements to ensure management of speed and fatigue are explained
- 2.3 Methods to calculate vehicle dimension and mass limits are explained
- 2.4 Methods to ensure loads are secured are explained
- 2.5 Workplace documents relating to chain of responsibility are completed and processed to workplace requirements

**3 Identify and report chain of responsibility breaches**

- 3.1 Chain of responsibility breaches are identified and explained
- 3.2 Workplace procedures and industry practices for reporting chain of responsibility breaches are identified and followed

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces but is **not** equivalent to TLIF2092A Demonstrate awareness of chain of responsibility regulations.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF0001 Apply chain of responsibility legislation, regulations and workplace procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include:

- applying chain of responsibility obligations relating to own job role on a minimum of three occasions
- explaining the chain of responsibility obligations of own job role and at least two other job roles directly related to own job role
- preparing reports of chain of responsibility breaches on a minimum of three occasions, each about a different type of breach.
- 

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- action required when possible breaches of the chain of responsibility are identified
- consequences of non-compliance with the chain of responsibility
- methods and requirements to ensure management of fatigue, speed, load restraint, mass and dimension
- parties in the chain of responsibility including
  - consignors and consignees
  - drivers/owner drivers
  - employers, prime contractors and operators
  - parties in the extended liability provisions of the Heavy Vehicle National Law (HVNL) and regulations or applicable state/territory law and regulations
  - loaders
  - loading managers
  - packers
  - schedulers
- principal obligations in chain of responsibility in the HVNL and regulations or applicable state/territory law and regulations including
  - consideration of traffic conditions in managing speed and fatigue

- extended liability
- fatigue, work and rest times
- securing loads
- vehicle dimension and load limits
- what constitutes a duty, a reasonable step, a breach and a penalty to chain of responsibility legislation as they apply to a range of job roles
- where to locate current chain of responsibility information
- workplace policies and procedures around chain of responsibility for own job role.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including legislation, regulations, codes of practice, workplace procedures and operation manuals.

Online assessment is not suitable for final assessment of this unit of competency.

# TLIF0002 Administer chain of responsibility policies and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to identify, apply and follow chain of responsibility policies and procedures in a supervisory role in relation to heavy vehicles.

It includes explaining the chain of responsibility features and administering the requirements in the Heavy Vehicle National Law (HVNL) and regulations or applicable state/territory law and regulations. It also involves administering and monitoring chain of responsibility workplace policies and procedures, and identifying and reporting chain of responsibility breaches.

Work is performed under general supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the

element.

**1 Explain chain of responsibility features in the Heavy Vehicle National Law and regulations or applicable state/territory law and regulations**

- 1.1 Principal obligations relating to chain of responsibility in the Heavy Vehicle National Law (HVNL) and regulations or applicable state/territory law and regulations are identified
- 1.2 Principal duties of each party in the chain of responsibility as outlined in the HVNL and regulations or applicable state/territory law and regulations are explained
- 1.3 Breaches and penalties for each party for failure to comply with chain of responsibility as outlined in the HVNL and regulations or applicable state/territory law and regulations are explained
- 1.4 Reasonable steps to be followed by each party to comply with chain of responsibility as outlined in the HVNL and regulations or applicable state/territory law and regulations are explained

**2 Administer chain of responsibility requirements in the Heavy Vehicle National Law and regulations or applicable state/territory law and regulations**

- 2.1 Workplace policies, procedures and other documents that include chain of responsibility as it applies to responsibilities of own job role are identified and explained
- 2.2 Methods and requirements to ensure management of speed and fatigue are explained
- 2.3 Methods to calculate vehicle dimension and mass limits are explained
- 2.4 Methods to ensure loads are secured are explained
- 2.5 Workplace documents relating to chain of responsibility are completed and processed to workplace requirements

**3 Administer and monitor chain of responsibility workplace policies and procedures**

- 3.1 Workplace policies and procedures relating to chain of responsibility are applied within the scope of responsibilities of own role
- 3.2 Workplace policies and procedures relating to chain of responsibility and any associated

changes are communicated to all staff

3.3 Application of workplace policies and procedures relating to chain of responsibility is monitored to ensure compliance with requirements

3.4 Appropriate action is taken when non-compliances with chain of responsibility requirements are identified

#### **4 Identify and report chain of responsibility breaches**

4.1 Chain of responsibility breaches are identified and investigated, and appropriate rectification action is taken

4.2 Workplace and industry practices for reporting chain of responsibility breaches are identified and followed

## **Foundation Skills**

Foundation skills essential to performance are explicit at a broad level in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide

## **Unit Mapping Information**

This unit replaces but is not equivalent to TLIF3093A Implement chain of responsibility regulations.

## **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF0002 Administer chain of responsibility policies and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include:

- applying chain of responsibility obligations relating to own job role on a minimum of three occasions
- applying and monitoring workplace policies and procedures relating to chain of responsibility in a supervisory role for a minimum of four weeks
- preparing reports of chain of responsibility breaches on a minimum of three occasions, each about a different type of breach.
- 

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- action required when possible breaches of the chain of responsibility are identified
- consequences of non-compliance with the chain of responsibility
- roles including
  - duties within the individual's own role
  - duties performed by others under the individual's supervision
  - duties that influence or direct other parties in the chain of responsibility
- methods and requirements to ensure management of fatigue, speed, load restraint, mass and dimension
- parties in the chain of responsibility including
  - consignors and consignees
  - drivers/owner drivers
  - employers, prime contractors and operators
  - loaders
  - loading managers
  - packers
  - parties in the extended liability provisions of the HVNL and regulations or applicable

- state/territory law and regulations
- schedulers
- principal obligations relating to chain of responsibility in the HVNL and regulations or applicable state/territory law and regulations including
  - consideration of traffic conditions in managing speed and fatigue
  - extended liability
  - fatigue, work and rest times
  - securing loads
  - vehicle dimension and load limits
- what constitutes a duty, a reasonable step, a breach and a penalty to chain of responsibility regulations as they apply to a range of job roles
- where to locate current chain of responsibility information
- workplace policies and procedures around chain of responsibility for own job role and the range of job roles for which own job role is responsible.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including legislation, regulations, codes of practice, workplace procedures and operation manuals.

Online assessment is not suitable for final assessment of this unit of competency.

## **TLIF0003 Develop and implement policies and procedures to ensure chain of responsibility compliance**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to ensure workplace compliance with chain of responsibility legislation in relation to heavy vehicle laws and regulations.

It includes explaining the chain of responsibility features in the Heavy Vehicle National Law (HVNL) and regulations or applicable state/territory law and regulations.

It also involves ability to identify the requirements for and to develop, implement and review, workplace policies and procedures for chain of responsibility.

Work is performed under minimum supervision generally as a manager.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

F – Safety Management

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

#### **ELEMENTS**

Elements describe the essential outcomes.

#### **1 Explain chain of responsibility**

#### **PERFORMANCE CRITERIA**

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1 Principal obligations relating to chain of**

- features in the Heavy Vehicle National Law and regulations or applicable state/ territory law and regulations**
- responsibility in the Heavy Vehicle National Law (HVNL) and regulations or applicable state/territory law and regulations are identified
- 1.2 Principal duties of each party in the chain of responsibility as outlined in the HVNL and regulations or applicable state/territory law and regulations are explained
- 1.3 Breaches and penalties for each party for failure to comply with chain of responsibility as outlined in the HVNL and regulations or applicable state/territory law and regulations are explained
- 1.4 Reasonable steps to be followed by each party to comply with chain of responsibility as outlined in the HVNL and regulations or applicable state/territory law and regulations are explained
- 2 Develop and implement workplace policies and procedures for chain of responsibility**
- 2.1 Activities relating to chain of responsibility in the HVNL and regulations or applicable state/territory law and regulations, are embedded into workplace policies, procedures and recording requirements in consultation with relevant stakeholders
- 2.2 Policies, procedures and recording requirements relating to chain of responsibility are implemented in the workplace
- 3 Review workplace policies and procedures relating to chain of responsibility**
- 3.1 Workplace policies and procedures relating to chain of responsibility are monitored and reviewed
- 3.2 Records and information relevant to chain of responsibility are analysed and reviewed
- 3.3 Changes and amendments are made to policies, procedures and recording requirements to maintain chain of responsibility compliance
- 3.4 Changes to workplace policies and procedures relating to chain of responsibility are communicated to relevant stakeholders

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces but is **not** equivalent to TLIF4094A Ensure compliance with chain of responsibility.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF0003 Develop and implement policies and procedures to ensure chain of responsibility compliance

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- checking how staff implement required policies and procedures
- ensuring continuous quality improvement of relevant policies, procedures and recording requirements to maintain chain of responsibility compliance
- liaising with relevant stakeholders as required
- producing policies and procedures that ensure workplace compliance with chain of responsibility in relation to heavy vehicle laws and regulations.
- 

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria include knowledge of:

- action required when possible breaches of the chain of responsibility are identified
- consequences of non-compliance with the chain of responsibility
- methods and requirements to ensure management of fatigue, speed, load restraint, mass and dimension
- parties in the chain of responsibility including
  - consignors and consignees
  - drivers/owner drivers
  - employers, prime contractors and operators
  - loaders
  - loading managers
  - packers
  - parties in the extended liability provisions of the Heavy Vehicle National Law (HVNL) and regulations or applicable state/territory law and regulations
  - schedulers
- principal obligations relating to chain of responsibility in the HVNL and regulations or

applicable state/territory law and regulations including

- extended liability
- consideration of traffic conditions in managing speed and fatigue
- fatigue, work and rest times
- securing loads
- vehicle dimension and load limits
- what constitutes a duty, a reasonable step, a breach and a penalty to chain of responsibility regulations as they apply to a range of job roles
- where to locate current chain of responsibility information
- workplace policies and procedures around chain of responsibility in the organisation.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including legislation, regulations, codes of practice, workplace procedures and operation manuals.

Online assessment is not suitable for final assessment of this unit of competency.

## **TLIF0004 Work effectively in a train-driving environment**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to work effectively in a train-driving environment.

It includes monitoring own health and wellbeing, maintaining situational awareness, maintaining workplace safety, mitigating threats and errors, and maintaining currency of industry skills and knowledge.

This activity applies to individuals who are engaged in operating rolling stock in the work environment and who are responsible for their own work. This may be in a defined context under direct supervision and/or with some individual responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

F – Safety Management

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Monitor own health and wellbeing**
  - 1.1 Health and wellbeing issues that impact on train driving are identified
  - 1.2 Own health and wellbeing is assessed against identified issues
  - 1.3 Potential for own health and wellbeing to deteriorate in relation to identified issues is determined
  - 1.4 Action is taken to improve own health and wellbeing status in relation to identified issues
  - 1.5 Locomotive cab is set up for individual comfort and optimum safety levels are ensured
- 2 Manage tasks and workload**
  - 2.1 Work activities are planned for the completion of tasks in accordance with organisational requirements
  - 2.2 Changes to workplace environment and related risks are monitored and managed to ensure a safe outcome to workplace operations, in accordance with guidelines, directions or instructions
  - 2.3 Attention is focused and distractions are managed in normal and high workload situations
  - 2.4 Activities are modified depending on work situations and contingencies
  - 2.5 Tasks, activities and information gathering are prioritised and scheduled, in accordance with their importance and need for action
- 3 Maintain situational awareness**
  - 3.1 Factors that impact on safe train operations are continuously monitored
  - 3.2 Situational awareness is applied through effective visual scans, use of communication systems, use of rail traffic information and use of systems of safe working, in accordance with workplace procedures
  - 3.3 Information that impacts on the operation of the train is continually gathered and interpreted to determine whether the current situation matches the expected state
  - 3.4 Changes in the current situation are anticipated and action is taken to correct or mitigate any negative impacts of these anticipated changes

- |   |     |  |
|---|-----|--|
| <b>4 Recognise, manage and mitigate threats and errors</b>  | 4.1 | Relevant human limitations/conditions of self and others are recognised as threats   |
|   | 4.2 | Strategies for reducing the frequency of errors are implemented  |
|   | 4.3 | Relevant environmental and/or operational threats and errors are identified  |
|   | 4.4 | Operating procedures are applied to avoid identified operational threats and errors occurring                                      |
| <b>5 Maintain currency of industry skills and knowledge</b> | 5.1 | New and altered policies, processes and procedures are read and implemented  |
|   | 5.2 | Clarification is sought from relevant personnel about anything that is not clear in relation to policies, processes and procedures |
|   | 5.3 | Feedback regarding policies, processes and procedures is provided to relevant personnel as required                                |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces but is not equivalent to TLIF4111A Work effectively in a train-driving environment.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIF0004 Work effectively in a train-driving environment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assessing and reassessing situations continually
- being vigilant
- communicating effectively with rail operations staff
- developing and implementing safety and operations plans
- executing response training in critical situations
- familiarising oneself with locomotive and train system being used
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- keeping industry knowledge up-to-date
- performing to track owner requirements, specifications and operational demands
- prioritising safety issues that will impact on work tasks
- prioritising tasks
- remaining alert and active when monitoring train operations
- reporting changes in situations as necessary
- scanning environment at regular intervals or important points in the process.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- decision making processes
- emergency management plan and procedures
- factors that impact on worker health and wellbeing and their effects
- fatigue management strategies
- how preconceptions of what is going to happen can detract from situational awareness

- how to interpret and prepare for rosters
- how to make better use of resources (human, equipment, information and procedures) to reduce rail safety occurrences
- how to reduce rail safety occurrences attributable to human error
- human error as a source of risk in rail operations
- impact illness and medication can have on information processing
- notices and directives about new and altered policies, processes and procedures
- operating procedures to avoid identified threats and errors occurring
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- risk management processes (hazard identification, risk management and risk controls)
- roles of other rail operations staff as they impact on train driving
- self-management
- situations that can result in a loss in situational awareness
- teamwork
- threat and error management
- tools and techniques to improve and manage human factors.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the rail corridor workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIF0098 Apply personal and equipment lockouts for rolling stock

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to apply personal and equipment lockouts to rolling stock in accordance with legislated rail safety requirements.

It includes following Rail Infrastructure Manager policies, procedures and protocols.

This unit is for rail safety workers required to apply lockouts to defined areas, rolling stock and specific equipment in order to carry out maintenance activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Identify personal and equipment lockout requirements**
  - 1.1 Area and rolling stock to be locked out is identified
  - 1.2 Appropriate lockouts are determined in accordance with activities to be undertaken and organisational policies and procedures
  - 1.3 Hazards are identified, risks are assessed and control measures are implemented
  - 1.4 Appropriate documentation is completed in accordance with organisational procedures
  - 1.5 Appropriate personnel are informed in accordance with organisational procedures
- 2 Apply and remove area lockout**
  - 2.1 Danger zone is safely accessed in accordance with organisational procedures
  - 2.2 Where existing lockouts are identified, appropriate personnel are contacted in accordance with organisational procedures
  - 2.3 Area lockouts are applied as required in accordance with organisational policies and procedures
  - 2.4 After all work has been completed and all sub lockouts have been removed, area lockout is removed
- 3 Apply and remove rolling stock lockout**
  - 3.1 Confirmation is made that area is locked out in accordance with organisational procedures
  - 3.2 Where existing lockouts are identified, appropriate personnel are contacted in accordance with organisational procedures
  - 3.3 Rolling stock lockouts are applied as required in accordance with organisational policies and procedures
  - 3.4 After all work has been completed and all sub lockouts have been removed, rolling stock lockout is removed
- 4 Apply and remove personal lockouts**
  - 4.1 Confirmation is made that area and rolling stock are locked out in accordance with organisational procedures
  - 4.2 Where existing lockouts are identified, appropriate personnel are contacted in accordance with organisational procedures

4.3 Personal lockouts are applied as required in accordance with tasks to be performed and organisational policies and procedures

4.4 After work has been completed all personal lockouts are removed

**5 Maintain lockout equipment** 5.1 Any damaged or unserviceable equipment is labelled and reported in accordance with organisational procedures

5.2 Missing or damaged equipment is replaced in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF0098A Apply personal and equipment lockouts for rolling stock.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF0098 Apply personal and equipment lockouts for rolling stock

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant rail safety legislation and workplace procedures
- communicating effectively with individuals and work groups
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying and following workplace procedures for locking out rolling stock
- identifying unsafe situations and emergencies
- removing rolling stock lockouts in accordance with workplace procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- organisational safety management system policies, lockout/tag out procedures and/or isolation protocols
- Rail Infrastructure Manager policies, procedures and protocols for identified unsafe situations or emergencies
- relevant rail danger zones
- relevant workplace procedures for applying personal and equipment lockout systems for rolling stock.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include

requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

- Practical assessment must occur in an appropriate range of situations in the rail workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

# TLIF1001 Follow work health and safety procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to follow and apply work health and safety (WHS)/occupational health and safety (OHS) procedures when carrying out work activities in compliance with the relevant WHS/OHS regulations and procedures.

It includes following workplace procedures for hazard identification and risk control, contributing to WHS/OHS management arrangements and completing WHS/OHS records.

Work is performed under some supervision generally within a team environment. It involves applying established WHS/OHS and hazard minimisation principles and procedures to conduct workplace activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Follow workplace procedures for hazard identification and risk control**

- 1.1 Workplace procedures for dealing with accidents, fire and emergencies are identified and followed
- 1.2 Workplace procedures for WHS/OHS and related work instructions for controlling risks in a workplace are accurately followed
- 1.3 Hazards in the workplace are identified and appropriate action is taken to report them and to minimise or eliminate risk to personnel, workplace and the environment
- 1.4 Safety regulations and established workplace safety and hazard control practices and procedures are obtained, interpreted and applied to day-to-day work activities
- 1.5 Procedures and precautions necessary for entry into confined spaces in the workplace are correctly followed
- 1.6 Personal protection clothing and equipment is correctly used in accordance with established safety practices and procedures
- 1.7 Established emergency and contingency plans are followed

**2 Contribute to arrangements for managing work health and safety**

- 2.1 WHS/OHS issues and identified safety hazards are raised with designated personnel in accordance with workplace procedures and relevant WHS/OHS legislation
- 2.2 Contributions to managing WHS/OHS in the workplace are made in accordance with workplace procedures and relevant legislation
- 2.3 WHS/OHS issues are raised with designated personnel in accordance with workplace procedures and relevant legislation
- 2.4 Participative arrangements for managing WHS/OHS in the workplace are contributed to in accordance with workplace procedures, and within scope of responsibilities and competence

**3 Complete work health and safety records**

- 3.1 WHS/OHS records are completed in accordance with workplace requirements
- 3.2 WHS/OHS records and legal requirements for maintaining records of occupational injury and diseases

are followed

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIF1001A Follow occupational health and safety procedures.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIF1001 Follow work health and safety procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating effectively with others when following WHS/OHS procedures
- completing documentation related to WHS/OHS in the workplace
- implementing WHS/OHS workplace procedures
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- reading and comprehending simple statements in English
- reading and interpreting relevant safety-related information including safety labels, instructions for safe work, relevant safety data sheets (SDSs)/material safety data sheets (MSDSs), workplace procedures and codes of practice
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- working collaboratively with others when following WHS/OHS procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency and evacuation procedures
- HAZCHEM symbols and implications for safe work and storage
- housekeeping standards and procedures
- location and use of safety alarms, manifests, emergency shut-off systems, emergency

- communications systems
- manual and mechanically-assisted lifting and load shifting procedures
- procedures for handling broken or damaged equipment
- relevant terms used in SDSs/MSDSs
- relevant WHS/OHS procedures and guidelines
- reporting procedures for unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- site layout and obstacles
- storage and use of hazardous substances
- WHS/OHS warning signs and signals.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulation
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIF1002 Conduct housekeeping activities

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to conduct housekeeping activities in the workplace.

It includes identifying housekeeping requirements, procedures and resources of different areas of the workplace; monitoring and maintaining cleanliness and tidiness in the workplace; and completing assigned housekeeping tasks.

Work is performed under some supervision generally in a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F - Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Determine housekeeping requirements for different workplace areas**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Workplace housekeeping procedures are identified

1.2 Equipment and consumables are selected in accordance with work area requirements

- 1.3 Specific procedures and resources for housekeeping activities in different parts of the work area are identified and followed
- 2 Monitor and maintain cleanliness and tidiness in the workplace**
    - 2.1 Initiative is used to continuously monitor worksite cleanliness and tidiness
    - 2.2 Housekeeping issues are raised with designated personnel in accordance with workplace procedures
    - 2.3 Housekeeping equipment is operated in accordance with manufacturer instructions and workplace policy
    - 2.4 Housekeeping equipment and supplies are maintained and stored
- 3 Complete assigned housekeeping duties**
    - 3.1 Assigned housekeeping duties are conducted in accordance with workplace procedures and ensuring that waste is removed
    - 3.2 Maintenance requirements of any damaged items are notified to appropriate personnel
    - 3.3 Schedules and records for housekeeping duties are maintained
    - 3.4 Work areas are checked and required workplace standards are met
    - 3.5 Work is carried out following enterprise practices and safe work procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF1002B Conduct housekeeping activities.

## Links

Companion Volume implementation guides are found in VETNet -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF1002 Conduct housekeeping activities

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during housekeeping activities
- communicating and working effectively with others when carrying out housekeeping activities
- identifying workplace housekeeping requirements and undertaking housekeeping in the workplace
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring condition and performance of housekeeping tools and equipment and servicing, in terms of servicing schedule and standard operating procedures
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reporting and rectifying within limits of own role, problems, faults and malfunctions identified when carrying out housekeeping activities, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- housekeeping standards
- purpose of housekeeping within the workplace

- relevant enterprise practices and safeworking procedures for own job role
- risks when carrying out housekeeping tasks and related precautions to control them
- servicing procedures for housekeeping equipment
- site layout and obstacles
- workplace procedures and policies for carrying out housekeeping activities in the workplace.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIF1009 Conduct cleaning operations in enclosed spaces

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to conduct cleaning operations in enclosed spaces.

It includes identifying risks, planning cleaning operations and cleaning the required enclosed space in accordance with safety regulations, procedures and operational requirements.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify risks and plan operation

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Cleaning operation requirements are assessed
- 1.2 Potential risks or hazards to self, the environment or others are identified

- 1.3 Relevant information including workplace procedures and health & safety codes are identified, read and clarified as required
  - 1.4 Cleaning and personal protective equipment and consumables are identified
  - 1.5 Requirements are assembled in accordance with national regulations, standards, safety codes and workplace procedures
  - 1.6 Work is planned identifying critical parameters of the work
- 2 Clean required enclosed space**
- 2.1 Unauthorised persons are removed from the work area
  - 2.2 Engineering and personal safety equipment is used
  - 2.3 Unwanted labels are removed
  - 2.4 Cleaning products are mixed in accordance with manufacturer's and workplace instructions as required
  - 2.5 Containers are swept out and washed so that mud, grime and residue from products stored in the containers are removed
  - 2.6 Security of chemicals and equipment is maintained
  - 2.7 Run-off is contained and waste is disposed of in accordance with local laws and workplace procedures
  - 2.8 Relevant documentation is completed
  - 2.9 Equipment used for the process is checked and stored
  - 2.10 Worksite is checked and returned to operational status

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF1009A Conduct cleaning operations in enclosed spaces.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF1009 Conduct cleaning operations in enclosed spaces

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist when conducting cleaning procedures in enclosed spaces
- communicating and working effectively with others when conducting cleaning procedures in enclosed spaces
- completing documentation related to conducting cleaning procedures in enclosed spaces
- following routine servicing procedures for cleaning tools and equipment
- identifying and correctly using equipment, emergency equipment and cleaning materials
- implementing contingency plans when conducting cleaning procedures in enclosed spaces
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading, interpreting and applying relevant legislation, processes and workplace procedures for carrying out cleaning operations in enclosed spaces
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- Critical parameters for cleaning operations in enclosed spaces include:
  - emergency precautions, tests and procedures
  - evacuation and rescue procedures
  - precautions for self, others and work area
  - relevant workplace procedures to be followed
  - sequence of operations
  - workplace personnel
- maintenance procedures for cleaning equipment
- procedures for carrying out tests for contaminant gases in enclosed spaces prior to performing cleaning operations
- relevant industrial regulations and requirements
- relevant WHS/OHS regulations, codes and guidelines concerning cleaning operations in enclosed spaces
- risks when carrying out cleaning operations in enclosed spaces and related precautions to control these risks
- site layout and obstacles
- workplace procedures and policies for carrying out cleaning operations in enclosed spaces.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

## **TLIF2006 Apply accident-emergency procedures**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to apply accident-emergency procedures in accordance with work health safety (WHS)/occupational health and safety (OHS) codes of practice, regulations and workplace requirements.

It includes responding to an incident, controlling and assisting at an accident or emergency site, finalising accident-emergency processes and completing records.

Work is performed under limited supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

F – Safety Management

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Respond to an incident**
  - 1.1 Response to incident or accident is in accordance with workplace emergency procedures and relevant regulatory requirements
  - 1.2 Incident cause and effects details are identified and reported
  - 1.3 Hazards are identified, risks are assessed and control measures are implemented
  - 1.4 Assistance requirements for accidents and emergencies are clarified and reported immediately to appropriate parties
  - 1.5 Requests for assistance are made to relevant personnel and emergency services
- 2 Control and assist at accident or emergency site**
  - 2.1 Site is controlled and protected until arrival of authorised personnel
  - 2.2 Assistance is provided to injured persons, within limitations of duty of care responsibilities and workplace procedures
  - 2.3 Relevant authorities at the site are cooperated with and assisted in accordance with workplace policies
- 3 Finalise accident - emergency process and complete records**
  - 3.1 Relevant information is exchanged in accordance with state/territory law and workplace procedures
  - 3.2 Documentation and reports are completed and processed in accordance with workplace and relevant regulatory requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF2006A Apply accident-emergency procedures.

## Links

# Assessment Requirements for TLIF2006 Apply accident-emergency procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing work environment to identify hazards, assess safety risks and implement appropriate work health and safety (WHS)/occupational health and safety (OHS) control procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- modifying activities depending on operational contingencies, risk situations and environments
- negotiating and resolving issues when responding to an accident or an emergency
- operating electronic communications equipment to required protocol
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- reading and interpreting relevant instructions, procedures and information
- selecting and appropriately applying technology, information systems and policies during a safety incident, accident or emergency
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- focus of operation of work systems, equipment or management, site and organisational operating and emergency procedures
- relevant WHS/OHS and environmental protection policies and procedures
- relevant regulatory and codes of practice requirements applicable in accident/emergency situations
- site layout
- typical problems that can occur during a safety incident, accident or emergency and related action that can be taken
- workplace emergency, fire and accident procedures
- workplace procedures for accident-emergency response.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIF2010 Apply fatigue management strategies

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to apply fatigue management strategies within the transport and logistics industry. Work is undertaken in compliance with relevant legislation, regulations, codes and guidelines.

It includes identifying and acting on signs of fatigue and implementing appropriate strategies to minimise fatigue during work activities, in particular when operating equipment, trains, vehicles, load shifting equipment, marine vessels and aircraft.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |   |  |
|---|--|
| <b>1 Identify and act on signs of fatigue</b> | 1.1 Potential causes of fatigue are identified and action is taken to minimise their effects in accordance with company procedures |
|---|--|

- 1.2 Personal warning signs of fatigue are recognised and necessary steps are taken in accordance with workplace procedures, to ensure that effective work capability and alertness are maintained
- 2 Implement strategies to minimise fatigue**
- 2.1 Workplace procedures are assessed to minimise fatigue
- 2.2 Factors that increase the risk of fatigue-related accidents and incidents are minimised
- 2.3 Fatigue management strategies are implemented in accordance with workplace policy
- 2.4 Lifestyle choices are made that promote the effective long-term management of fatigue
- 2.5 Effective practices in combating fatigue are adopted and applied
- 2.6 Personal fatigue management strategies are communicated to relevant people
- 2.7 Appropriate counter measures are planned to combat fatigue

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF2010A Apply fatigue management strategies.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIF2010 Apply fatigue management strategies

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in rosters and standard operating procedures as they relate to fatigue management
- adjusting lifestyle patterns to ensure effective fatigue management during work activities
- applying precautions and required action to minimise and control the effects of fatigue when carrying out own work functions
- applying relevant legislation and workplace procedures
- communicating effectively with others when applying fatigue management strategies
- identifying and meeting own learning needs about fatigue management related matters
- modifying activities and taking appropriate initiatives to manage fatigue in the workplace depending on work contexts, risk situations and environments
- reading and interpreting instructions, procedures, regulations and signs related to fatigue management and applying them to work activities
- recognising symptoms of fatigue and taking appropriate action in accordance with fatigue management regulations and workplace procedures
- working collaboratively with others to manage and minimise the effects of fatigue during work activities.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes and effects of fatigue on workers
- factors that increase fatigue-related accidents
- how fatigue affects workplace performance

- how fatigue contributes to workplace accidents
- lifestyles that promote effective long-term fatigue management
- relevant fatigue management codes, regulations, permit and licence requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) regulations as they relate to fatigue
- risks and hazards created by workplace fatigue
- sources of information on fatigue
- strategies and ways of managing fatigue
- ways of recognising fatigue
- workplace policies and procedures related to fatigue management and the control of factors that can contribute to fatigue and fatigue-related accidents.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIF2018 Operate firefighting equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to operate firefighting equipment. Work is undertaken in accordance with relevant codes of practice, manufacturer's instructions and workplace emergency procedures, as part of work activities within the transport and logistics industry.

It includes checking, identifying, selecting and using the appropriate firefighting equipment.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Check firefighting

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Firefighting equipment is checked for serviceability in accordance with manufacturer's specifications and regulatory

<b>equipment</b>	requirements
	1.2 Non-functioning equipment or equipment past its service date is identified and reported to designated personnel for replacement or service
<b>2 Use firefighting equipment</b>	2.1 Equipment and personal safety equipment used for fighting fires are correctly selected for type of fire in accordance with manufacturer's instructions
	2.2 Fire is controlled using firefighting equipment in accordance with manufacturer's instructions and workplace emergency procedures
	2.3 Equipment is stored safely in accordance with manufacturer's instructions and workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF2018A Operate firefighting equipment.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF2018 Operate firefighting equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others when fighting fires using firefighting equipment
- identifying and correctly selecting, using and carrying out basic checks on firefighting equipment relevant to own work functions
- interpreting and following operational instructions and prioritising work
- monitoring performance of firefighting equipment and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in firefighting equipment and emergency procedures in the workplace
- reading and comprehending simple statements in English
- reading and interpreting instructions, procedures, regulations, signs and labels relevant to using firefighting equipment and applying them to work activities
- selecting and using required personal protective equipment conforming to industry, and work health and safety (WHS)/occupational health and safety (OHS) standards
- working safely and collaboratively with others when fighting fires using firefighting equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian codes of practice, regulations and safeworking systems relevant using and checking firefighting equipment
- chemistry of fire, the effects of different types of material in a fire and the principles underlying the spread of fire and its extinguishment firefighting techniques, agents and precautions applicable to different classes of fire
- different classes of fire, their characteristics and strategies, and equipment needed for their extinguishment
- fixed fire prevention and extinguishing installations and their principles of operation
- manufacturer's instructions for checking firefighting equipment
- relevant WHS/OHS and environmental protection procedures and guidelines
- types of firefighting appliances, equipment and systems, their identifying features, principles of operation and the procedures for their use and basic checking of serviceability
- typical problems that can occur with firefighting equipment and operations, and appropriate action and solutions
- workplace procedures and policies for using and checking firefighting equipment.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIF2019 Ensure a safe on-board passenger and working environment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to ensure a safe on-board passenger and working environment in accordance with work health and safety (WHS)/occupational health and safety (OHS) regulatory requirements, relevant codes of practice, insurance and workplace requirements, as part of work activities in the transport and logistics industry.

It includes performing checks and inspections, rectifying and reporting work hazards and non-compliances, and completing all required documentation.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the                      Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

### **1 Perform checks and inspections**

1.1 Non-compliances are identified in accordance with WHS/OHS procedures and statutory requirements

1.2 Actual and potential hazards are accurately identified

### **2 Rectify and report work hazards and non-compliances**

2.1 Hazards and non-compliances are reported in accordance with workplace instructions

2.2 Appropriate action to minimise or eliminate identified hazards is taken in accordance with workplace procedures and WHS/OHS regulations

### **3 Complete documentation**

3.1 Procedures and processes for required records, reports and other documentation concerning inspections, identified safety hazards and action taken are confirmed

3.2 Required records, reports and other documentation concerning inspections, identified safety hazards and action taken are completed and proofread

3.3 Required records, reports and other documentation concerning inspections, identified safety hazards and action taken are processed in accordance with workplace and WHS/OHS regulatory requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIF2019A Ensure a safe on-board passenger and working environment.

# Assessment Requirements for TLIF2019 Ensure a safe on-board passenger and working environment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- making appropriate judgements about the relative urgency of hazard reports
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and safely using relevant equipment and materials during work activities
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- using correct manual handling procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- writing and preparing safety incident reports and other documents required within workplace activities.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communication and negotiation requirements
- documentation and record requirements
- emergency procedures
- equipment, and materials used during work activities, and precautions and procedures that should be followed in their use
- first aid procedures
- hazards that may occur in the workplace and action that can be taken to control and minimise the risks involved
- location of safety equipment and procedures for its use
- manual handling procedures
- personal protective equipment and procedures for its use
- regulations and codes of practice relevant to work activities including the Australian Dangerous Goods (ADG) Code
- relevant WHS/OHS and environmental protection procedures and guidelines
- workplace procedures and policies related to ensuring a safe workplace.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIF2062 Apply awareness of safeworking rules and regulations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to apply a basic awareness of applicable safeworking rules and regulations to work functions in the rail industry.

It includes interpreting and applying safeworking rules and protocols, recognising and reporting unsafe situations, following safeworking procedures, and taking appropriate safety precautions.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

Work is performed under established procedures, with accountability and responsibility for self and others in achieving the prescribed outcomes within the limits of duty of care responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Apply applicable safeworking rules and regulations**

- 1.1 Relevant procedures for applicable safeworking rules and regulations are identified, accessed and interpreted when carrying out work activities as part of rail operations
- 1.2 Relevant safeworking regulations are applied to all work activities applicable to rail functions
- 1.3 Communications are conducted in accordance with applicable safeworking system requirements
- 1.4 Appropriate communications records are maintained as required, in accordance with applicable safeworking system rules and regulations

### **2 Recognise and report unsafe situations**

- 2.1 Hazards are identified, risks are assessed and control measures are implemented
- 2.2 Unsafe situations are identified in accordance with applicable safeworking rules and workplace procedures
- 2.3 Situations in the work environment identified as unsafe are reported to appropriate personnel in accordance with applicable safeworking rules and regulations

### **3 Follow safeworking rules and procedures**

- 3.1 Relevant protocols are followed as specified in applicable safeworking system rules and regulations, as required
- 3.2 Appropriate records and documentation pertinent to safeworking protocols are completed in accordance with the requirements of applicable safeworking system rules and regulations
- 3.3 Appropriate safety precautions are interpreted and followed during work activities, in accordance with applicable safeworking rules and regulations

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF2062A Apply awareness of safeworking rules and regulations.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF2062 Apply awareness of safeworking rules and regulations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others applicable to rail operations concerned
- completing documentation related to safeworking requirements applicable to rail functions concerned
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating electronic communications equipment to required protocol
- reading and interpreting relevant rules, regulations and instructions applicable to rail operations concerned
- recognising problems and hazards that may arise during rail operations and taking appropriate action
- working collaboratively with others to fulfil safeworking requirements applicable to rail operations concerned.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant regulations, nationally approved compliance codes and/or guidelines
- communication protocols as they relate to the functions of the occupation concerned
- emergency management plan
- rail terminology as defined in applicable safeworking system
- safeworking system rules and workplace procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation with terminology as defined by the relevant Rail Transport Operator safeworking system including workplace procedures, regulations, rules and codes of practice.

# TLIF2080 Safely access the rail corridor

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to enter the rail corridor.

It includes taking appropriate safety precautions to:

- access the danger zone
- access the rail corridor
- respond appropriately in an emergency.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

This unit involves the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety.

This unit applies to all people accessing the rail corridor.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Take appropriate safety precautions to access the rail corridor**

- 1.1 Authority to enter the rail corridor is obtained from Protection Officer/Possession Protection Officer
- 1.2 Appropriate personal protective equipment (PPE) is worn conforming to Rail Infrastructure Manager requirements
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Rail corridor is entered and a visual assessment is maintained to monitor and respond appropriately to potential risks

### **2 Take appropriate safety precautions to access the danger zone**

- 2.1 Direction of approaching trains and maximum speed is recognised
- 2.2 Safe place is identified
- 2.3 Types of warning provided are recognised and confirmed
- 2.4 Changed local conditions are identified, impact on safety is determined and safety precautions are modified as required
- 2.5 Communications with other personnel are maintained in accordance with workplace procedures
- 2.6 Unsafe situations and/or emergencies are identified and appropriate action is taken in accordance with workplace procedures

### **3 Take appropriate action in an emergency**

- 3.1 Emergencies and potential emergencies are identified
- 3.2 Range of appropriate responses for specific emergencies are outlined
- 3.3 'Emergency' or 'danger' response signal is given as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF2080C Safely access the rail corridor.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF2080 Safely access the rail corridor

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- accessing the rail corridor safely
- applying relevant workplace rules and procedures
- communicating effectively with individuals and/or groups
- following workplace policies, procedures and protocols
- identifying the danger zone and safe places
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- using personal protective equipment (PPE) that conforms to Rail Infrastructure Manager requirements.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- extent of rail corridor and relevant rail danger zones
- Rail Infrastructure Manager defined entry requirements and limitations
- Rail Infrastructure Manager policies, procedures, rules and protocols for identified unsafe situations or emergencies within the limits of the role being undertaken
- Rail Infrastructure Manager rules and procedures for working around electrical infrastructure and/or power sources
- rail terminology as defined by the applicable Rail Infrastructure Manager safeworking system
- safety management system.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate a rail corridor.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate PPE, materials, tools and equipment currently used in the rail industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, rules and codes of practice.

## **TLIF2081 Perform lookout duties**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to perform lookout duties on a rail network, in accordance with Rail Infrastructure Manager, legislative and regulatory requirements.

It includes taking up looking position, conducting lookout duties and taking action in unsafe situations or emergencies.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

F – Safety Management

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Take up lookout position**

- 1.1 Danger zone is safely accessed in accordance with workplace procedures
- 1.2 Location of lookout position is confirmed in accordance with workplace procedures
- 1.3 Sighting distance of rail traffic is calculated in accordance with workplace procedures
- 1.4 Unsafe and/or ineffective lookout positions are identified and reported in accordance with workplace procedures
- 1.5 Audible warning equipment is tested as required
- 1.6 Changed local conditions are identified and impact on lookout position is determined
- 1.7 Effectiveness of lookout placement and method of communicating rail traffic movements is tested and confirmed

### **2 Conduct lookout duties**

- 2.1 Vigilance is maintained at all times
- 2.2 Approach of rail traffic is communicated using agreed methodology in accordance with workplace procedures
- 2.3 Hand signals are used to confirm safe conditions to rail traffic in accordance with workplace procedures

### **3 Take action in unsafe situations or emergencies**

- 3.1 Unsafe situations and/or emergencies are identified, and appropriate action is taken to minimise risk in accordance with workplace procedures
- 3.2 Emergencies and incidents are recorded and reported to relevant personnel in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF2081B Perform lookout duties.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIF2081 Perform lookout duties

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with individuals and work groups
- complying with worksite protection plan
- complying with relevant workplace safeworking system rules and procedures
- identifying job hazards including unsafe and ineffective lookout positions and taking required action to minimise, control or eliminate identified hazards
- providing sufficient warning time for workers and equipment to move to a safe place
- taking up lookout position that enables effective communication of rail traffic movements
- using hand signals (with or without a flag or light) to communicate with rail traffic crew in accordance with workplace instructions.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- audible warning equipment and its use
- emergency management plan and workplace procedures
- rail terminology as defined by the applicable Rail Infrastructure Manager
- relevant rail danger zones and safeworking systems
- relevant Rail Infrastructure Manager policies, procedures, rules and protocols for identifying unsafe situations or emergencies
- relevant Rail Infrastructure Manager rules, procedures and protocols.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant protection plan exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

## **TLIF2082 Perform handsignaller duties**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to perform handsignaller duties, in accordance with Rail Infrastructure Manager, legislative and regulatory requirements.

It includes identifying site protection requirements, taking up hand signaller positions, using hand signal commands to manage rail traffic, and taking action in unsafe situations or emergencies.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for performing handsignaller duties.

A hand signal is a signal given by hand movements, with or without a flag or light.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

F – Safety Management

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Identify site protection requirements**

- 1.1 Worksite protection plan briefing conducted by relevant personnel is attended
- 1.2 Responsibilities as handsignaller for protection are identified and clarified as required
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Tools and equipment required for handsignalling duties are identified, obtained and checked for functional condition
- 1.5 Communications equipment to be used is tested and set to correct channel

### **2 Take up handsignaller position**

- 2.1 Danger zone is safely accessed in accordance with workplace procedures
- 2.2 Unsafe and/or ineffective signalling positions are identified and reported in accordance with workplace procedures
- 2.3 Handsignalling positions that conform to worksite protection plan and workplace procedures are identified and the most appropriate position is chosen
- 2.4 Situational awareness is conducted to identify potential risks
- 2.5 Audible track warning devices are applied in accordance with workplace procedures as required
- 2.6 Effectiveness of handsignalling position and communications protocols are confirmed

### **3 Use hand signal commands to manage rail traffic**

- 3.1 Vigilance is maintained at all times
- 3.2 Protection Officer is alerted to approaching rail traffic in accordance with workplace procedures
- 3.3 Correct hand signal is displayed to rail traffic in accordance with Protection Officer instructions
- 3.4 Verbal instructions are provided to train driver as required
- 3.5 Railway track signals are replaced as required

**4 Take action in unsafe situations or emergencies**

- 4.1 Unsafe situations and/or emergencies are identified, and appropriate action is taken to minimise risk in accordance with workplace procedures
- 4.2 Emergencies and/or incidents are recorded and reported to relevant personnel in accordance with workplace procedures

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

**Unit Mapping Information**

This unit replaces and is equivalent to TLIF2082B Perform handsignaller duties.

**Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF2082 Perform handsignaller duties

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying and responding to hand, light and flag signals during the day and at night
- applying Rail Infrastructure Manager procedures for using railway track signals
- communicating effectively with individuals and work groups
- ensuring effectiveness of handsignalling placement
- explaining appropriate action in an unsafe situation and/or emergency in accordance with workplace procedures
- following workplace policies, procedures and safeworking protocols
- giving and interpreting STOP and ALL CLEAR hand signals in accordance with Rail Infrastructure Manager workplace procedures
- identifying and selecting correct equipment and ensuring equipment functional condition
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying unsafe and ineffective handsignalling positions
- taking appropriate safety precautions when accessing the danger zone in accordance with workplace procedures
- taking up handsignalling position that enables effective communication with rail traffic crew
- using hand signal commands to instruct a rail traffic crew in a clear and timely manner.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hand, light and flag signals used during the day and at night
- operational communications protocols and safeworking systems
- positioning requirements for handsignallers
- Rail Infrastructure Manager and organisational policies, procedures, rules and protocols relevant to handsignaller duties
- Rail Infrastructure Manager emergency management plan
- rail terminology as defined by the applicable Rail Infrastructure Manager
- railway track signals and their use
- relevant rail danger zones
- worksite protection plan in accordance with workplace briefing and procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

# TLIF2097 Use audible track warning devices

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to access, place and remove audible track warning devices (ATWDs) in accordance with legislative and regulatory requirements.

It includes accessing, placing and removing ATWDs in accordance with legislative requirements, organisational and/or network owner policies and procedures.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

ATWDs are used to warn rail traffic crews and rail safety workers within the rail corridor. ATWDs are also known as:

- railway track signals
- audible safety signalling devices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

# Assessment Requirements for TLIF2097 Use audible track warning devices

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and transporting, placing, removing and disposing of audible track warning devices (ATWDs)
- communicating effectively with individuals and groups
- completing documentation
- complying with site safety plans, work health and safety (WHS)/occupational health and safety (OHS) regulations and rail safety regulatory requirements
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- reading and interpreting organisational procedures for placing and removing ATWDs.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- organisational procedures for lost and stolen ATWDs
- organisational procedures for placing and removing ATWDs
- relevant ATWDs and/or railway track signal workplace procedures for storing and transporting dangerous goods
- relevant rail danger zones
- relevant rail safety, WHS/OHS and environmental procedures and regulations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include

requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in a rail corridor workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, Australian Dangerous Goods (ADG) Code, codes of practice and operation manuals.

# TLIF2106 Respond to emergencies and abnormal situations when driving medium/heavy on-track vehicles

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to respond to emergencies and abnormal situations when driving a medium/heavy on-track vehicle, in accordance with regulatory requirements, relevant codes of practice and workplace procedures.

It includes identifying emergencies or abnormal situations, responding to emergencies or abnormal situations and completing incident reports.

It involves the application of workplace procedures and regulatory requirements when responding to emergencies and abnormal situations, as part of work activities in a range of contexts across the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
<b>1 Assess emergencies or abnormal situations</b>	<p>1.1 Emergencies, potential emergencies or abnormal situations are identified and needs are prioritised in accordance with organisational and/or network emergency response plans and procedures</p> <p>1.2 Hazards are identified, risks are assessed and control measures are implemented</p> <p>1.3 Implications of the emergency, potential emergency or abnormal situation are evaluated in accordance with organisational and/or network requirements and procedures</p>
<b>2 Respond to emergencies or abnormal situations</b>	<p>2.1 Potential actions are considered in accordance with organisational and/or network procedures and regulatory requirements</p> <p>2.2 Relevant personnel are alerted to the emergency, potential emergency or abnormal situation in accordance with organisational and/or network emergency procedures and plans</p> <p>2.3 Communications are maintained with relevant personnel to determine appropriate course of action</p> <p>2.4 Response is taken in accordance with organisational and/or network procedures, received instructions from relevant personnel, regulatory requirements and emergency response plan</p> <p>2.5 Safety incidents and emergencies are handled appropriately in accordance with established response plan and within limits of responsibility and duty of care</p> <p>2.6 Information is provided to relevant emergency service personnel in accordance with regulatory and organisational and/or network procedures</p>
<b>3 Complete incident reports</b>	<p>3.1 Required incident reporting procedures and processes are confirmed</p> <p>3.2 Incident reports are filed in legibly and proofread</p> <p>3.3 Incident reports are processed in accordance with regulatory requirements and organisational and/or network procedures</p>

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF2106A Respond to emergencies and abnormal situations when driving medium/heavy on-track vehicles.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF2106 Respond to emergencies and abnormal situations when driving medium/heavy on-track vehicles

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safety management system actions and workplace safeworking procedures
- communicating effectively with network control officer and/or protection officer
- communicating effectively with relevant personnel
- completing incident reports
- explaining possible responses to identified emergency or abnormal situation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- reading and interpreting relevant instructions, procedures, information and signs
- working collaboratively with others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hazards that may exist when responding to emergencies and abnormal situations and ways of controlling the risks involved
- organisational procedures for using communications systems for on-track vehicle operation
- principles of effective communication
- relevant rail danger zones
- relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations

- safety management plan.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager including rules, workplace procedures, regulations, codes of practice and operation manuals.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# **TLIF3003 Implement and monitor work health and safety procedures**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to implement and monitor work health and safety (WHS)/occupational health and safety (OHS) procedures, in compliance with relevant WHS/OHS regulations.

It includes accessing information about WHS/OHS workplace policies and procedures, and implementing and monitoring procedures for identifying and assessing hazards and controlling risks. It also includes planning and supervising housekeeping arrangements, and implementing and monitoring procedures for dealing with hazardous events.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

F – Safety Management

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Access information about WHS/OHS and workplace policies and procedures**

- 1.1 Relevant provisions of WHS/OHS legislation and codes of practice are accurately followed
- 1.2 Information on workplace WHS/OHS health and safety policies, procedures and programs is stored in a readily accessible location and manner
- 1.3 Information is accurately and clearly explained to work team
- 1.4 Information about risk identification outcomes and control procedures is provided to appropriate personnel

### **2 Implement and monitor procedures for identifying and assessing hazards**

- 2.1 Existing and potential hazards in work area are identified and reported
- 2.2 Identified hazards are assessed in relation to relative risk
- 2.3 Appropriate action is initiated to minimise and control risks/hazards

### **3 Implement and monitor procedures for controlling risks**

- 3.1 Incorporation of hierarchy of risk control measures within hazard register is checked
- 3.2 Existing risk control measures are implemented, monitored and reviewed
- 3.3 Work procedures to control risks are implemented and adherence to them by work group is monitored
- 3.4 Required improvements to existing risk control measures are identified, including required resources for implementation, and reported to appropriate personnel

### **4 Plan and supervise housekeeping arrangements**

- 4.1 Housekeeping tasks are identified and incorporated in enterprise work roles
- 4.2 Housekeeping equipment is maintained
- 4.3 Team members are allocated housekeeping tasks and are supervised in performing allocated tasks

- 4.4 Housekeeping practices are planned to conform with environmental and WHS/OHS health and safety requirements
- 5 Implement and monitor procedures for dealing with hazardous events**
- 5.1 Workplace procedures for dealing with hazardous events are implemented as required to ensure prompt control action is taken
- 5.2 Hazardous events are investigated to identify causes
- 5.3 Risk control measures are implemented to prevent recurrence and to minimise risks of hazardous events or issues, and are reported to appropriate personnel for implementation

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF3003A Implement and monitor occupational health and safety procedures.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF3003 Implement and monitor work health and safety procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- ensuring that precautions and required action are taken to minimise, control or eliminate identified hazards
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency and evacuation procedures
- HAZCHEM symbols and implications for safe work and storage
- hierarchy of risk controls
- housekeeping standards and procedures
- location and use of safety alarms, manifests, emergency shut-off systems, emergency communications systems
- manual and mechanically operated lifting and load shifting procedures
- procedures for storing and using flammable materials
- procedures for storing and using hazardous substances
- relevant WHS/OHS procedures and guidelines
- reporting procedures for unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- risks when using manually-operated equipment to shift loads and related precautions to control these risks
- signs and signals for WHS/OHS warnings
- site layout and obstacles
- terms used in safety data sheets (SDSs)/material safety data sheets (MSDSs)
- transport requirements for transporting goods within a workplace.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## TLIF3013 Coordinate breakdowns and emergencies

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to coordinate breakdowns and emergencies when driving a commercial vehicle, in accordance with relevant licence requirements and regulations.

It includes evaluating breakdown and emergency situations, consulting with relevant personnel/emergency authorities, coordinating activities at a breakdown/emergency site, and completing all required reports and documentation.

Work is performed with limited or minimum supervision. It involves judgement and discretion when coordinating breakdowns and emergencies that occur when driving a commercial vehicle.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

F – Safety Management

### Unit Sector

Not applicable.

### Elements and Performance Criteria

Elements describe the      Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

**1 Evaluate breakdown and emergency situations**

- 1.1 Causes and effects of breakdown/emergency situations are identified and clarified
- 1.2 Breakdown/emergency coordination procedures are applied in accordance with workplace policies
- 1.3 Assistance is provided to injured persons within limitations of duty of care responsibilities and workplace requirements
- 1.4 Load is identified and nature of risks and hazards are established and communicated to relevant authorities
- 1.5 Appropriate precautions and actions are taken where load is identified as including dangerous goods, explosives or hazardous substances, in accordance with relevant codes of practice, regulations and related procedures

**2 Consult with relevant persons and authorities**

- 2.1 Details of causes and effects of breakdown/emergency are reported in accordance with workplace procedures
- 2.2 Assistance and cooperation is provided to relevant authorities within legal and workplace limitations
- 2.3 Information about breakdown/emergency is obtained and/or exchanged in accordance with legal and workplace requirements

**3 Coordinate breakdown and emergency situations**

- 3.1 Suitable measures are taken to control, warn, stop or divert traffic at breakdown/emergency site
- 3.2 Personal security precautions are taken in accordance with workplace procedures
- 3.3 Assistance is requested to minimise possibility of further damage to persons or property, in accordance with workplace policy, and relevant rules and regulations
- 3.4 Appropriate measures are taken to control and protect breakdown/emergency site
- 3.5 Traffic at breakdown/emergency site is controlled, as required, in accordance with regulatory requirements and workplace procedures

**4 Complete documentation**

- 4.1 Required breakdown/emergency documentation and report procedures and processes are confirmed
- 4.2 Documentation and reports are filled in legibly and proofread

4.3 Documentation and reports are processed in accordance with workplace requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIF3013A Coordinate breakdowns and emergencies.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIF3013 Coordinate breakdowns and emergencies

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- controlling traffic at breakdown or emergency site
- identifying and correctly using emergency equipment at breakdown or emergency site
- identifying containers and goods coding, markings and emergency information panels
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading and comprehending simple statements in English
- reading and interpreting relevant instructions, procedures, information and signs
- working collaboratively with others when coordinating a response to a breakdown or emergency
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of various dangerous goods/explosives/hazardous substances and their implications in breakdown/emergency situations
- duty of care requirements in a breakdown and/or emergency situation
- procedures to be followed in a breakdown and/or emergency
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant state/territory road traffic authority road rules, regulations, permit and licence requirements
- risks and hazards that can exist in breakdown/emergency situations and related precautions to control the risks
- types of breakdowns and emergencies that can occur when driving a vehicle and appropriate action that can be taken in each case
- types of emergency equipment, their purpose, and the procedures for their use.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# **TLIF3022 Implement/monitor procedures when warehousing/storing dangerous goods/hazardous substances**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to implement and monitor work health and safety (WHS)/occupational health and safety (OHS) policies, safe work procedures and programs for warehousing or storing dangerous goods and hazardous substances in accordance with regulatory requirements, as part of work undertaken in the transport and logistics industry.

It includes accessing and providing information on legislative requirements, workplace policies and procedures; implementing and monitoring procedures for identifying and assessing hazards; and implementing and monitoring procedures for controlling risks.

Work is performed under general supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

F – Safety Management

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Provide information on legislative requirements, workplace policies and procedures**

1.1 Legislative requirements for dangerous goods and hazardous substances are identified, stored and retrieved as required

1.2 Information on WHS/OHS policies and safeworking procedures relating to storing dangerous goods and hazardous substances is stored in a readily accessible location and manner

1.3 Information on legislative requirements, workplace policies and safe work procedures relating to storing dangerous goods and hazardous substances is accurately and clearly explained to work group

1.4 Information on the outcome of hazard identification, risk assessment and control measure implementation is accurately and clearly explained to work group

**2 Implement and monitor procedures for identifying hazards and assessing risks**

2.1 Dangerous goods or hazardous substances are identified from information provided, including class labels, manifests, safety data sheets (SDSs)/material safety data sheets (MSDSs) and other documentation

2.2 Confirmation is sought from relevant personnel where potentially dangerous goods or hazardous substances do not appear to be appropriately marked

2.3 Risks associated with storing identified dangerous goods or hazardous substances are assessed, reported/recorded in accordance with workplace policy

**3 Implement and monitor risk control procedures**

3.1 Established risk control measures for safely storing dangerous goods and hazardous substances are implemented, monitored and reviewed in accordance with workplace procedures

3.2 Workplace procedures to control risks are implemented

3.3 Adherence to risk control procedures by work group is monitored in accordance with workplace procedures

3.4 Improvements to existing risk control measures are identified, including required resources for implementation, and reported to appropriate personnel, as required

3.5 Procedures for monitoring and controlling risks comply

with the hierarchy of risk controls

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF3022A Implement/monitor procedures when warehousing/storing dangerous goods and/or hazardous substances.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF3022 Implement/monitor procedures when warehousing/storing dangerous goods/hazardous substances

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- assessing handling and storing precautions and requirements for dangerous goods and hazardous substances
- communicating effectively with others when storing or warehousing dangerous goods and hazardous substances
- completing relevant documentation
- determining required permits
- identifying containers and goods coding, markings, labels and emergency information panels for the mode of transport/storage selected
- identifying dangerous goods and hazardous substances special requirements
- identifying dangerous goods and hazardous substances from labels, IMDG markings, HAZCHEM signs and other relevant identification criteria
- identifying job and site hazards, and planning work to minimise risks
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- planning own work including predicting consequences and identifying improvements
- reading and interpreting relevant instructions, procedures, information and signs
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards

- storing dangerous goods and hazardous substances safely
- working collaboratively with others when storing or warehousing dangerous goods and hazardous substances
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- equipment applications, capacities, configurations, safety hazards and control measures
- housekeeping standards and procedures
- permit and licence requirements
- problems that may occur when storing or warehousing dangerous goods and hazardous substances and action that can be taken to resolve these problems
- relevant regulations and codes for storing dangerous goods and hazardous substances
- risks for storing dangerous goods and hazardous substances and related precautions to control risk
- workplace procedures for handling and storing dangerous goods and hazardous substances.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIF3058 Apply safeworking rules and regulations to rail functions

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to apply applicable safeworking rules and regulations to rail functions carried out on rail networks.

It includes correctly using communications protocols; interpreting and responding to radio, hand signal and light commands; interpreting and following relevant safeworking rules and protocols; and taking appropriate action in safety incidents, unsafe situations or emergencies.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under established safeworking system rules, protocols and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Apply safeworking rules and regulations**

#### **2 Apply communications protocols**

#### **3 Use and interpret radio, hand, light and flag commands**

#### **4 Follow safeworking protocols**

#### **5 Take action in unsafe situations or emergencies**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Relevant safeworking system for area where work activities are to be carried out is identified prior to commencing work

1.2 Relevant rules for the applicable safeworking system are followed when carrying out activities as part of rail operations

1.3 Work activities are conducted in compliance with relevant state/territory safeworking regulations for activities concerned

2.1 Communications protocols are followed in accordance with the applicable safeworking system requirements

2.2 Appropriate communications records are maintained as required within the applicable safeworking system rules and procedures

3.1 Applicable safeworking system rules and procedures are applied when using and interpreting radio, hand, light and flag commands

3.2 Hand signals are only used in conditions of good visibility

3.3 Any command not clearly understood is regarded as a STOP command in accordance with applicable safeworking system rules and regulations

4.1 Relevant protocols are followed as required and specified in safeworking system rules and procedures

4.2 Appropriate records and documentation are completed in accordance with the requirements of the applicable safeworking system rules and procedures

5.1 Unsafe situations are identified in accordance with the requirements of the applicable safeworking system rules and procedures

5.2 Appropriate action is taken to report and/or control safety incidents, identified unsafe situations or emergencies, in accordance with rail safety worker duty of care responsibilities and the requirements of applicable

safeworking system rules and procedures

## **6 Record unsafe situations or emergencies**

- 6.1 Appropriate records and documentation of safety incidents, identified unsafe situations or emergencies are completed in accordance with the requirements of applicable safeworking system rules and procedures
- 6.2 Records of safety incidents, identified unsafe situations or emergencies are maintained in accordance with the requirements of applicable safeworking system rules and procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIF3058A Apply safeworking rules and regulations to rail functions.

## **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF3058 Apply safeworking rules and regulations to rail functions

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying safeworking system rules, protocols and procedures to rail functions
- checking compliance between work and safeworking rules and regulations and taking appropriate action in accordance with operating procedures when non-compliance is identified
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying unsafe or emergency situations that could occur in the workplace and appropriate responses
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating electronic communications equipment to required protocol
- reading and interpreting relevant safeworking rules, regulations and instructions
- using and responding appropriately to a range of radio, hand, light and flag signals
- working collaboratively with others to fulfil safeworking requirements.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- action to be taken in safety incidents, identified unsafe situations and emergencies within the limits of own responsibility under the applicable safeworking systems
- applicable safeworking system requirements and limitations for applicable rail functions
- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- rail safety worker duty of care responsibilities

- rail terminology as defined in the applicable Rail Infrastructure Manager safeworking system
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection legislation and policies
- safeworking system rules and workplace procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation with terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

# **TLIF3063 Administer the implementation of fatigue management strategies**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to administer the implementation of fatigue management strategies during work operations in a defined workplace in accordance with national and state/territory legislation and relevant regulations.

It includes monitoring the implementation of fatigue management strategies, recognising breaches of fatigue management policies, procedures and regulations, and developing and assessing staff competence in fatigue management.

It also includes providing feedback to staff on shortcomings in their fatigue management skills and knowledge, and reporting to management on the implementation of fatigue management policy.

Work is performed under limited supervision generally as a team leader or supervisor.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

F – Safety Management

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Monitor the implementation of fatigue management strategies**

1.1 Work activities of employees, subcontractors and suppliers in organisation's products and services supply chain are monitored in accordance with organisation's fatigue risk management implementation plan

1.2 Reviews are undertaken of scheduled versus actual hours of work and where a compliance breach is identified, appropriate action is taken to analyse the reasons concerned and to rectify the situation

### **2 Recognise breaches of fatigue management policies, procedures and regulations**

2.1 Signs and symptoms of fatigue in employees are identified in accordance with operational procedures

2.2 Breaches of fatigue management policies, procedures and regulations in the work activities of employees, subcontractors and suppliers are recognised and reported in accordance with standard procedures

2.3 Errors and incidents traceable to non-compliance with fatigue management procedures and regulations are investigated and reported in accordance with operational procedures

2.4 Appropriate action is taken in conjunction with employees, subcontractors or suppliers concerned, to ensure ongoing and future compliance with the organisation's fatigue management policy and procedures

### **3 Develop and assess staff competence in fatigue management**

3.1 Appropriate training programs and learning resources are developed and provided to ensure employees understand the organisation's fatigue management policies and procedures, and the risks, causes and consequences of fatigue

3.2 Employees are assessed to confirm they are competent in understanding the organisation's fatigue management strategies and can apply them to their day-to-day work activities and responsibilities

3.3 Deficiencies in employee competence to apply organisation's fatigue management strategies to their work activities are identified, and appropriate learning opportunities are provided to enable employees to achieve required competence

- 4 Provide feedback to staff on shortcomings in fatigue management skills and knowledge**
- 4.1 Evidence of employee shortcomings in implementing fatigue management strategies is obtained and interpreted from observation of signs and symptoms of fatigue in work activities, periodic evaluations of work performance, and assessments of competence carried out as part of training and learning activities
  - 4.2 Employees are provided with feedback on identified shortcomings in their implementation of fatigue management strategies, and appropriate support and counselling is provided on how they might address these shortcomings
  - 4.3 Further learning opportunities and information are provided to assist employees implement organisation's fatigue management strategies in their area of work activity, as required
- 5 Report on the implementation of fatigue management policy**
- 5.1 Periodic audits of the implementation of fatigue management strategies in the work area/s of responsibility are carried out in accordance with standard procedures
  - 5.2 Accidents and safety incidents are investigated and analysed to identify the extent to which fatigue might have been a contributing factor
  - 5.3 Reports on implementation of organisation's fatigue risk management system are prepared and submitted to designated personnel in accordance with standard procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF3063A Administer the implementation of fatigue management strategies.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF3063 Administer the implementation of fatigue management strategies

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in relevant regulations, policies and procedures
- applying relevant legislation and workplace procedures
- assisting employees to identify their own learning needs on matters related to fatigue management
- communicating effectively with others
- modifying activities and taking appropriate initiatives to administer the implementation of organisation's fatigue risk management system depending on contexts, risk situations and environments
- planning and carrying out audits and reviews of organisation's fatigue risk management system
- planning and organising training and learning opportunities for employees on fatigue management and implementing organisation's fatigue risk management system
- reading and interpreting documentation on organisation's fatigue risk management system and related policy, instructions, procedures and regulations and applying this information to supervisory activities
- recognising breaches of fatigue management strategies and regulations and taking appropriate action in accordance with organisation's fatigue risk management system
- working collaboratively with employees and other management staff to implement organisation's fatigue risk management system.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes and consequences of fatigue in relation to employees and organisation
- employee and organisation responsibilities for implementing fatigue management

regulations and policies including suppliers and sub-contractors in organisation's services and products supply chain

- factors that increase fatigue-related accidents
- hazards and risks created by fatigue in the workplace
- how fatigue affects workplace performance
- how fatigue contributes to workplace accidents
- lifestyles that promote the effective long-term management of fatigue
- options and resources for providing training and learning opportunities for employees on fatigue management and the implementation of organisation's fatigue risk management system, including initial induction training, in-depth training on fatigue and fatigue management techniques, remedial training where existing competence is assessed as being insufficient and fatigue management refresher training
- organisation's fatigue risk management system and the workplace policies and procedures related to fatigue management, and the control of factors that can contribute to fatigue and fatigue-related accidents
- organisation's fatigue risk management system as it relates to the operational area/s being administered
- procedures for auditing and reviewing organisation's fatigue risk management system, and related policy and procedures for reporting audit outcomes
- processes and resources for assessing employee fatigue management competence
- relevant codes, regulations, permit and licence requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) regulations
- strategies and ways of managing fatigue
- ways of assisting individuals to assess their own sleep patterns and to evaluate their own fitness for work such as providing information on how to identify sleep disorders and how to obtain appropriate treatment
- ways of providing feedback to employees on identified deficiencies in their competence to implement fatigue management strategies
- ways of recognising fatigue.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## **TLIF3083 Conduct track protection assessment**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to conduct track protection assessments, in accordance with Rail Infrastructure Manager, legislative and regulatory requirements.

It includes undertaking track assessment and determining the type of track protection required to perform work activities safely.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety.

This unit also provides the authority to position lookout protection.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

F – Safety Management

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Undertake track assessment**

#### **2 Plan track protection required to perform work activity safely**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Track work activity to be performed is identified and its complexity is analysed

1.2 Impact of the work activity on the network is determined

1.3 Hazards are identified, risks are assessed and control measures are implemented

1.4 Track protection requirements are analysed and identified

1.5 Visual assessment is conducted to assess the characteristics of the track worksite

2.1 Outcomes of the visual assessment and the complexity of the track work activity are analysed to determine type of track protection required

2.2 Worksite protection plan is prepared in accordance with safety assessment outcomes and Rail Infrastructure Manager rules, procedures and protocols for rail safety

2.3 Plan is communicated to relevant personnel

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF3083B Conduct track protection assessment.

## Links

Companion Volume implementation guides are found in VETNet -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF3083 Conduct track protection assessment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with individuals and work groups
- communicating with Network Control Officer is maintained using appropriate communications systems
- conducting a visual assessment of track worksite characteristics to identify job hazards and taking required action to minimise, control or eliminate identified hazards
- defining the authority boundaries when conducting track protection assessment
- identifying unsafe situations and emergencies
- identifying safe places when conducting track protection assessment
- identifying positions for handsignaller and lookouts when conducting track protection assessment as required
- identifying level and pedestrian crossings when conducting track protection assessment
- identifying fixed rail infrastructure when conducting track protection assessment
- preparing site protection arrangement plans
- preparing worksite protection plan.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of track worksites
- operational communications protocols and systems
- positioning requirements for handsignallers
- Rail Infrastructure Manager policies, procedures, rules and protocols for identified unsafe situations or emergencies within workplace role
- Rail Infrastructure Manager rules and procedures

- Rail Infrastructure Manager rules and procedures for working around electrical infrastructure
- rail terminology as defined by the relevant Rail Infrastructure Manager safeworking system
- railway track signals and their use
- relevant rail danger zones and safeworking systems
- relevant safeworking system workplace rules and procedures
- types of track protection and safeworking systems
- types of worksite protection equipment and their use
- work activity complexity
- worksite protection plans.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

# TLIF3085 Apply local incident response procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to apply local incident response procedures in accordance with relevant regulations and workplace procedures.

It involves applying basic emergency response principles when dealing with incidents within a defined local area. It also includes responding to an incident, carrying out incident response activities and completing follow-up actions.

Work must be carried out in compliance with relevant regulations and emergency workplace procedures concerning action to be taken in an emergency.

Work is performed under minimal supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the Performance criteria describe the performance needed to

essential outcomes. demonstrate achievement of the element.

- 1 Respond to incident**
  - 1.1 Details of incident are received, assessed and confirmed
  - 1.2 Hazards are identified, risks are assessed and control measures are implemented
  - 1.3 Immediate response requirements are identified and actioned in accordance with organisational procedures
  - 1.4 Communication is established with network control personnel and instructions are followed in accordance with organisational policies and procedures
- 2 Perform incident response activities**
  - 2.1 Incident response activities are carried out in accordance with organisational policies and procedures
  - 2.2 Assistance is provided in accordance with worker duty of care responsibilities and organisational requirements
  - 2.3 Assistance is provided to relevant authorities in accordance with organisational policy and legislative requirements
  - 2.4 Information is collected and passed on to relevant personnel in accordance with organisational procedures
- 3 Complete follow-up actions**
  - 3.1 Details of incident are collected, recorded and managed in accordance with organisational procedures
  - 3.2 Contribution is made to debrief process and recommendations are prepared and submitted, as required
  - 3.3 Documentation relating to the implementation and coordination of incident responses is completed in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIF3085A Apply local incident response procedures.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIF3085 Apply local incident response procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying incident response procedures
- applying relevant legislation and workplace procedures
- carrying out incident response activities
- collaborating with others
- communicating clearly and effectively with others
- completing follow-up actions
- completing relevant documentation
- interpreting and following operational instructions and prioritising work
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures and information
- responding to an incident.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency management plan
- layout of area under control and potential obstacles for responding parties
- organisational procedures and policies for responding to incidents, including procedures for responding to and providing practical assistance where required
- procedures for contacting emergency services personnel and other relevant stakeholders
- relevant legislation, regulations, codes of practice, procedures and guidelines concerning incident response
- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, regulations, codes of practice, procedures and guidelines

- risks, hazards and related precautions to control risk
- types of incidents that can occur and appropriate action to be taken in each case.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including emergency management plan, workplace procedures, regulations, codes of practice and operation manuals.

# **TLIF3087 Follow work health and safety, and environmental procedures in the rail industry**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to follow and apply work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures when carrying out work activities in the rail industry.

It includes identifying and following workplace procedures for hazard identification and risk control, contributing to arrangements for managing WHS/OHS and environmental procedures, and completing appropriate records.

Work is performed under some supervision generally in a team environment. It involves applying established WHS/OHS, environmental and hazard minimisation principles and procedures when conducting workplace activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

F – Safety Management

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

### **ELEMENTS**

### **PERFORMANCE CRITERIA**

Elements describe the essential outcomes.

**1 Follow workplace procedures for hazard identification and risk control**

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Workplace procedures for dealing with environmental incidents, accidents, fires and emergencies are identified and followed
- 1.2 Workplace procedures for WHS/OHS, environmental and related work instructions for controlling risks in a workplace are identified and followed
- 1.3 Hazards in the workplace are identified and appropriate action is taken to report them and to minimise or eliminate risk to personnel, workplace and the environment
- 1.4 Safety regulations and established workplace safety and hazard control practices and procedures are obtained, interpreted and applied to day-to-day work activities
- 1.5 Hazard and risk control documentation is completed in accordance with organisational requirements as required
- 1.6 Personal protective clothing and equipment is correctly used in accordance with established safety practices and procedures as required
- 1.7 Established emergency and contingency plans are followed in an emergency
- 1.8 Information on workplace WHS/OHS and environmental policies, procedures and programs is stored in a readily accessible location and manner

**2 Contribute to arrangements for managing WHS/OHS**

- 2.1 WHS/OHS issues and identified safety hazards are raised with designated personnel in accordance with workplace procedures and relevant WHS/OHS legislation
- 2.2 Contributions to managing WHS/OHS in the workplace are made in accordance with workplace procedures and provisions of relevant legislation
- 2.3 WHS/OHS issues are raised with designated personnel in accordance with workplace procedures and relevant WHS/OHS legislation

- 2.4 Participative arrangements for managing WHS/OHS in the workplace are contributed to within workplace procedures, scope of responsibilities and competencies
- 3 Implement environmental control procedures**
- 3.1 Environmental protection measures are implemented or applied in accordance with organisational policies and procedures
- 3.2 Identified improvements to existing procedures are passed on to appropriate personnel
- 3.3 WHS/OHS and environmental records and reports are completed in accordance with organisational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF3087A Follow occupational health, safety and environmental procedures in the rail industry.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF3087 Follow work health and safety, and environmental procedures in the rail industry

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating and consulting effectively with others
- completing relevant documentation in accordance with workplace procedures
- identifying job and environmental hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- operating and adapting to differences in equipment in accordance with operational procedures
- reading and interpreting relevant safety-related information, workplace procedures and codes of practice
- reporting and rectifying faults and malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) in accordance with industry and work health and safety (WHS)/occupational health and safety (OHS) regulations
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency management plan and evacuation procedures
- location and use of safety alarms and emergency communications systems
- relevant environmental protection regulations
- relevant sections of state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- relevant WHS/OHS procedures, rail industry standards, rules, codes of practice and guidelines
- reporting procedures for unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- signs and signals used for WHS/OHS warnings
- site layout and obstacles
- typical problems that can occur when caring for the environment when carrying out work activities in the rail industry
- workplace procedures and guidelines for caring for the environment during workplace operations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# **TLIF3089 Implement fatigue management policies and procedures for rail infrastructure**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to implement fatigue management policies and procedure for rail infrastructure.

It includes monitoring the implementation of fatigue management and recognising breaches of fatigue management policies, procedures, programs and regulations. It also includes assessing rail safety worker competence in fatigue management, providing feedback to workers on shortcomings in their fatigue management skills and knowledge, and reporting to management on the fatigue management program implementation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines for managing fatigue in the workplace.

Work is performed under limited supervision within a rail infrastructure environment. It involves the application of relevant rail safety regulations and the principles of fatigue management when administering the implementation of an organisation's fatigue management strategies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

F – Safety Management

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Monitor implementation of fatigue management program**

#### **2 Recognise breaches of fatigue management policies, procedures and regulations**

#### **3 Provide feedback to employees on shortcomings in fatigue management skills and knowledge**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work activities of employees, subcontractors and suppliers in supplying products and services are monitored as required, in accordance with the organisation's fatigue risk-management implementation plan
  - 1.2 Reviews are undertaken of scheduled versus actual hours of work and where a compliance breach is identified, appropriate action is taken to analyse the reasons concerned and to rectify the situation
  - 1.3 Deficiencies in the competence of individual employees to apply the organisation's fatigue management strategies to their work activities are identified, and appropriate learning opportunities are provided
- 2.1 Signs and symptoms of fatigue in employees are identified in accordance with operational procedures
  - 2.2 Breaches of fatigue management policies, procedures and regulations in the work activities of employees, subcontractors and suppliers are identified as required and reported in accordance with workplace procedures
  - 2.3 Errors and incidents traceable to non-compliance with fatigue management procedures and regulations are investigated and reported in accordance with operational procedures
  - 2.4 Appropriate action is taken in conjunction with employees, subcontractors and suppliers as required, to ensure ongoing and future compliance with the organisation's fatigue management policy and procedures
- 3.1 Employees are provided with feedback on identified shortcomings in their implementation of fatigue management strategies and appropriate support and counselling are provided on how they might address these shortcomings

3.2 Information is provided to employees to assist them in implementing the organisation's fatigue management strategies in their area of work activity

#### **4 Report on implementation of fatigue management policy**

4.1 Periodic audits of the implementation of fatigue management policies and procedures in work areas of responsibility are carried out in accordance with organisational policies and procedures

4.2 Reports on the implementation of the organisation's fatigue risk-management system are prepared and submitted to designated personnel in accordance with organisational procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIF3089A Implement fatigue management policies and procedures for rail infrastructure

## **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF3089 Implement fatigue management policies and procedures for rail infrastructure

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- assisting rail safety workers identify their own learning needs on fatigue management matters
- identifying training and learning opportunities for rail safety workers on fatigue management
- reading and interpreting documentation on an organisation's fatigue risk-management program and related policy, instructions, procedures and regulations relating to fatigue management, and applying them to supervisory activities
- recognising breaches of fatigue management strategies and regulations and taking appropriate action in accordance with organisation's fatigue risk-management system
- using appropriate numeric functions when carrying out reporting procedures
- working collaboratively with rail safety workers and other staff.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes, ways of recognising, and consequences of fatigue on rail safety workers and the rail organisation, and ways of managing them
- fatigue management symptoms and strategies
- fatigue risk management program
- hierarchy of fatigue risk management
- options and resources for providing training and learning opportunities for rail safety workers on fatigue management and the implementation of an organisation's fatigue risk management program
- organisation's fatigue risk management program as it relates to the operational areas being

administered

- processes and resources for assessing rail safety worker competence in fatigue management
- relevant rail safety and work health and safety (WHS)/occupational health and safety (OHS) legislation as they relate to fatigue
- risks and hazards created by fatigue in the workplace
- ways of assisting individuals to assess their own sleep patterns and evaluate their own fitness for work, including information on identifying sleep disorders and obtaining appropriate treatment
- ways of providing feedback to rail safety workers on identified deficiencies in their proficiency to implement the fatigue risk management program.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant fatigue risk management programs, exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Transport Operator system of fatigue risk management including workplace procedures, regulations, codes of practice and operation manuals.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# **TLIF3091 Apply awareness of dangerous goods and hazardous materials requirements**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to identify and apply an awareness of hazardous substances and dangerous goods requirements.

It includes identifying legislation relating to hazardous substances and dangerous goods; segregating dangerous goods and hazardous substances; and dealing with incidents involving hazardous substances and dangerous goods.

This unit is intended for people who have minimal or no contact with explosives or hazardous substances and dangerous goods as part of their job role but who require an awareness of how hazardous substances and dangerous goods are labelled and segregated when being transported.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

F – Safety Management

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

### **ELEMENTS**

### **PERFORMANCE CRITERIA**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Apply appropriate legislation for transporting dangerous goods and hazardous substances**

- 1.1 Legislation and organisational policies and procedures for transporting hazardous substances and dangerous goods are identified and accessed
- 1.2 Labelling of different types of dangerous goods and hazardous substances is identified from accessed documentation
- 1.3 Hazardous loads are identified from transport manifests

**2 Separate dangerous goods and hazardous substances**

- 2.1 Hazardous substances and dangerous goods class and subsidiary risk information is identified
- 2.2 Hazardous substances and dangerous goods are correctly separated in accordance with relevant documentation, and class and subsidiary risk information as required

**3 Deal with incidents involving dangerous goods and hazardous substances**

- 3.1 Information is obtained about dangerous goods and hazardous substances involved
- 3.2 Hazards are identified, risks are assessed and risk control measures are implemented
- 3.3 Documentation is checked for compliance with separation rules as required, in accordance with organisational procedures
- 3.4 Information about dangerous goods and hazardous substances is relayed to appropriate people and authorities

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIF3091A Apply awareness of dangerous goods and hazardous materials requirements.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIF3091 Apply awareness of dangerous goods and hazardous materials requirements

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others
- checking relevant dangerous goods and hazardous substances documentation in accordance with operational procedures and instructions
- checking relevant dangerous goods and/or hazardous substances segregation in accordance with class and subsidiary risk information/documentation
- identifying dangerous goods and hazardous substance labels
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying relevant safety data sheets (SDSs)/material safety data sheets (MSDSs), manufacturer instructions, and organisational policies and procedures for dangerous goods and/or hazardous substances
- reading and interpreting relevant instructions, procedures, information and signs.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- labelling of dangerous goods and hazardous substances
- relevant national, state/territory regulations and codes of practice for identifying and labelling dangerous goods and hazardous substances, including appropriate sections of the current Australian Dangerous Goods (ADG) Code and other applicable legislation
- risks and hazards when transporting dangerous goods and hazardous substances.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, industry standards, codes of practice, current ADG Code and operation manuals.

# TLIF4007 Implement and coordinate accident-emergency procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to implement and coordinate accident and emergency procedures in accordance with relevant regulations and workplace procedures.

It includes responding to the incident, coordinating on-site activities and completing follow-up actions.

Work is performed under some supervision generally within a team environment. It involves the application of basic emergency response principles when implementing accident and emergency procedures, and includes providing assistance ranging from simple injuries to applying life support systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Respond to incident**
  - 1.1 Details of incidents, accidents and emergencies are received, analysed and confirmed
  - 1.2 Hazards are identified, risks are assessed and control measures are implemented
  - 1.3 Immediate coordination requirements are identified and actioned in accordance with organisation procedures
  - 1.4 Travel to incident site is undertaken by the shortest, fastest, legal means and routes
- 2 Coordinate on-site activities**
  - 2.1 Control of site activities is assumed on arrival, and operator and other authorities present are informed of this action
  - 2.2 Assistance is provided to clients and operators within limitations of duty of care and organisational requirements
  - 2.3 Details of personnel, including names and nature of injuries, are notified to relevant personnel, in accordance with organisational policies and procedures
  - 2.4 Assistance is provided to relevant authorities within legal and policy limitations
- 3 Complete follow-up actions**
  - 3.1 Details of affected personnel, including names, nature of injuries and follow-up treatments are notified to next-of-kin in accordance with organisational procedures
  - 3.2 Incidents resulting in a near miss, accident or emergency are investigated and a report, including recommendations, is completed in accordance with organisational policies and procedures
  - 3.3 Accident procedures and emergency plans are reviewed for effectiveness and recommendations for changes are prepared and submitted to appropriate persons

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF4007A Implement and coordinate accident-emergency procedures.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF4007 Implement and coordinate accident-emergency procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others when implementing and coordinating accident and emergency procedures
- completing relevant documentation
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information and signs
- working collaboratively with others when implementing and coordinating accident and emergency procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- means to control and organise an accident scene, provide practical assistance and cooperate with others at the scene
- relevant work health safety (WHS)/occupational health and safety (OHS) and other regulatory codes, procedures and guidelines concerning response to accidents and emergencies
- risks and hazards in the workplace and related precautions to control risk

- workplace procedures and policies for responding to accidents and emergencies.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIF4014 Develop and maintain a safe workplace

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to develop and maintain a safe workplace in accordance with regulations.

It includes planning and implementing safety requirements; informing and training personnel on work health safety (WHS)/occupational health and safety (OHS) legislation, codes and standards; and establishing and maintaining procedures for assessing and controlling safety risks. It also includes monitoring, adjusting and reporting safety performance, and evaluating the WHS/OHS system and related policies, procedures and programs.

Work involves discretion and judgement in developing and maintaining a safe workplace.

Work is performed under minimum supervision with general guidance on progress and outcomes of work.

Work generally involves responsibility for resource coordination and allocation, and provides leadership of others individually or in teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Plan and implement safety requirements**

- 1.1 Health and safety risk assessments are made as part of production planning exercises
- 1.2 Policy and procedures are developed to implement requirements for a safe workplace
- 1.3 Work practices are planned with colleagues to ensure compliance with workplace and environmental legislation and standards
- 1.4 Safe operating procedures are documented and communicated
- 1.5 Work practices are implemented in accordance with requirements specified in legislation and standards for safe workplaces and environments
- 1.6 Effective induction and supervision is provided to support colleagues in managing their organisational responsibilities
- 1.7 Purchasing policy for providing goods and services is informed by WHS/OHS considerations

### **2 Inform and train personnel on WHS/OHS legislation, codes and standards**

- 2.1 Legislation, standards and organisational policies and practices relevant to creating and maintaining a safe workplace and environment are made available to individuals/teams
- 2.2 Arrangements are made to provide information in a language, style and format that is understood by colleagues
- 2.3 WHS/OHS training program is developed and implemented to identify and fulfil employee WHS/OHS training needs as part of the organisational general training program
- 2.4 Individuals/teams are informed of their legal responsibility for maintaining a safe workplace and environment
- 2.5 Implications of an unsafe workplace and environment are made clear to all within the workplace

### **3 Establish and maintain**

- 3.1 Safety risks presented by identified hazards are correctly

<b>procedures for assessing and controlling safety risks</b>	assessed in accordance with WHS/OHS legislation and codes of practice
	3.2 Activities are monitored to ensure procedure is adopted effectively throughout area of managerial responsibility
	3.3 Risk assessment is addressed at the planning, design and evaluation stages of any change within area of managerial responsibility to ensure risk is not increased
	3.4 Measures to control assessed safety risks are developed and implemented in accordance with the hierarchy of controls, relevant WHS/OHS legislation, codes of practice and trends identified from the WHS/OHS records system
	3.5 Activities are monitored to ensure risk control procedure is adopted effectively throughout area of managerial responsibility
	3.6 Risk control is addressed at the planning, design and evaluation stages of any change within area of managerial responsibility to ensure adequate risk control measures are included
<b>4 Monitor, adjust and report safety performance</b>	4.1 Hazards are identified, assessed and prioritised for action
	4.2 Controls are selected to minimise risks to health and safety
	4.3 Waste recycling, reduction and disposal is carried out within legislative and organisational requirements
	4.4 Recommendations for improvements to meet legislation and associated standards are submitted to designated persons/groups
	4.5 Individuals/teams are informed of improvements and alterations to WHS/OHS procedures in the workplace
	4.6 Systems, records and reporting procedures are maintained according to legislative requirements
<b>5 Evaluate WHS/OHS system and related policies, procedures and programs</b>	5.1 Effectiveness of WHS/OHS system and related policies, procedures and programs is assessed in accordance with workplace WHS/OHS aims
	5.2 Improvements to WHS/OHS system are developed and implemented to ensure more effective achievement

workplace WHS/OHS aims and organisational policies and objectives

5.3 Inadequacies in existing risk control measures are identified in accordance with the hierarchy of controls, and resources enabling implementation of new control measures are sought and/or provided in accordance with appropriate procedures

## **6 Investigate and report non-conformance**

6.1 Conformance with WHS/OHS legislation and codes of practice is assessed to ensure that as a minimum, legal WHS/OHS standards are maintained

6.2 Non-conformance is investigated and dealt with in accordance with legislative requirements

6.3 Colleagues are supported to acquire and apply competencies to meet legislative requirements and associated standards

6.4 Changes to operations and practices are implemented to ensure non-conformance is not repeated

## **7 Establish and maintain a WHS/OHS records system**

7.1 WHS/OHS record requirements are confirmed to identify patterns of occupational injury and disease within area of managerial responsibility

7.2 WHS/OHS records system is set up to meet WHS/OHS record requirements

7.3 Employees are trained in the use of the WHS/OHS records system

7.4 Changes are made to the WHS/OHS records system to ensure effective achievement of workplace WHS/OHS aims

7.3 WHS/OHS records are used as the basis for developing and submitting relevant workplace WHS/OHS reports to management

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF4014A Develop and maintain a safe workplace.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF4014 Develop and maintain a safe workplace

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing the working environment to identify hazards, assess risks, implement control measures, and design and implement appropriate WHS/OHS management systems
- applying fatigue management knowledge and techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others when establishing a safe workplace
- completing relevant documentation when establishing a safe workplace
- designing and implementing appropriate WHS/OHS management systems
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocols
- planning work activities, including predicting consequences and identifying improvements
- reading and interpreting relevant instructions, procedures, information, labels and signs
- reporting and/or rectifying identified problems that may arise, in accordance with regulatory requirements and workplace procedures
- selecting and appropriately applying technology, information systems and procedures to improve WHS/OHS conformance, information systems and reporting requirements
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- working collaboratively with others when developing and maintaining a safe

workplace

- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate links to other management systems, for example contractors, maintenance and purchasing
- arrangements for participation and consultation over WHS/OHS
- considerations for choosing between different control measures
- elements of an effective WHS/OHS management system
- hazards and associated safety risks that exist in the workplace
- hierarchy of controls
- how to identify when expert advice is needed
- incident and accident investigation arrangements
- principles of risk management
- range of control measures available
- relevant WHS/OHS and environmental protection policies and procedures
- relevant regulatory and code requirements
- role of technical information and experts in designing risk control measures, monitoring systems and health surveillance procedures
- significance of other management systems and procedures for WHS/OHS
- systems of risk control, recognising the significance of WHS/OHS for effective workplace operation
- training, coaching and mentoring approaches appropriate for use in WHS/OHS training programs
- typical problems that can occur when managing WHS/OHS systems and related action that can be taken
- workplace business policies and plans related to WHS/OHS issues
- workplace protocols and procedures for managing personal work priorities and professional development.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# **TLIF4061 Respond to electric tram-driving emergencies and abnormal situations**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to respond to emergencies and abnormal situations when driving an electric tram in accordance with regulatory requirements and workplace procedures.

It includes identifying and responding to emergency and abnormal situations, arranging follow-on support and assistance, and communicating with staff and passengers in accordance with workplace procedures and relevant regulatory requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines, as well as relevant state/territory road rules and tramway regulatory requirements.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when responding to electric tram-driving emergencies and abnormal situations as part of workplace activities across a variety of operational contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

F – Safety Management

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Identify emergency or abnormal electric tram-driving situation**

#### **2 Respond to emergency or abnormal electric tram-driving situation**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Emergency, potential emergency or abnormal situation is promptly recognised and assessed, and needs are prioritised in accordance with workplace emergency response plan/procedures
- 1.2 Implications of emergency, potential emergency or abnormal situation are evaluated in accordance with workplace requirements
- 1.3 Options for reporting the situation and/or taking action are considered in accordance with workplace procedures and regulatory requirements
- 1.4 Network Control Officer and relevant personnel are alerted to emergency, potential emergency or abnormal situation as required, in accordance with workplace operating and emergency procedures and plans
- 1.5 Communications are maintained with relevant personnel to determine appropriate course of action
- 2.1 Emergency, potential emergency or abnormal situation is responded to in accordance with workplace procedures, received instructions, regulatory requirements and emergency response plan
- 2.2 Hazardous substances and dangerous goods class and subsidiary risk information is identified
- 2.3 Safety incidents and emergencies are handled appropriately in accordance with established response plan and within limits of rail safety worker duty of care responsibilities
- 2.4 Responsibilities are fulfilled in accordance with workplace emergency response plan and code/regulatory requirements
- 2.5 Assistance is provided in controlling the site prior to and following arrival of emergency services
- 2.6 In an emergency, assistance is provided to other staff and emergency services personnel conducting initial scene

survey

2.7 Directions of the Network Control Officer and controlling emergency services authority are followed and all possible assistance is provided in response to those directions

2.8 Incident reports are completed accurately in accordance with regulatory and workplace procedures

### **3 Arrange follow-on support and assistance**

3.1 In an accident or illness, medical assistance and support is arranged as required in accordance with workplace procedures

3.2 First aid is provided until medical assistance arrives, within limits of own responsibility and competence in accordance with workplace procedures

### **4 Communicate with staff and passengers**

4.1 Staff and passengers are provided with relevant, appropriate and timely advice on emergency and abnormal situations

4.2 Instructions are provided to relevant personnel and/or passengers in accordance with workplace procedures, consistent with the nature of the emergency or abnormal situation

4.3 Evacuation procedures for personnel and/or customers are explained and/or demonstrated as required in accordance with workplace procedures

4.4 Customer service and safety needs arising from emergency or abnormal situation are identified and acted on in accordance with regulatory and workplace requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIF4061A Respond to electric tram-driving emergencies and abnormal situations.

## **Links**

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF4061 Respond to electric tram-driving emergencies and abnormal situations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in electric trams and ancillary equipment
- completing required documentation and reports
- following emergency response plan in accordance with workplace procedures
- identifying hazards and taking appropriate action to minimise, control or eliminate identified hazards
- identifying, solving and/or reporting problems promptly, in accordance with workplace procedures
- modifying activities depending on workplace contexts, risk situations and environments
- providing first aid within limits of own responsibility and competence
- reading and interpreting relevant instructions, procedures and information
- responding to incidents, emergencies or abnormal situations in accordance with operational procedures and workplace emergency response plan
- selecting and using relevant communications and other equipment
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- focus of operation of work systems, equipment, management and site operating systems when responding to electric tram-driving emergencies or abnormal situations

- hazards that may occur in transport and allied industries that can lead to emergency situations, and related hazard control strategies
- problems that may occur when responding to electric tram-driving emergencies and abnormal situations, and action that can be taken to resolve these problems
- procedures for communications protocol
- relevant documentation and reporting requirements
- relevant state/territory road and traffic authority and tramway operating procedures
- relevant WHS/OHS and environmental protection procedures and guidelines
- workplace procedures for responding to electric tram-driving emergencies and abnormal situations .
- 

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate tram workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, emergency management plan, codes of practice and operation manuals.

# TLIF4064 Manage fatigue management policy and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to manage organisational fatigue management policy and procedures in accordance with relevant legislation and regulations.

It includes identifying legal requirements, liabilities and responsibilities for establishing and/or improving fatigue management implementation plans, policies and procedures. It also includes acting appropriately on reports and identified breaches of fatigue management regulations.

It also includes ensuring operational systems are compliant with fatigue management regulations and policy; planning and organising adequate resources and operational systems; and facilitating the training and assessment of staff on their responsibilities and fatigue management techniques.

Work is performed under minimum supervision generally as a manager.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

**1 Identify or confirm fatigue management legal requirements and responsibilities**

1.1 Current legal requirements, liabilities and responsibilities for effective fatigue management within the organisation are identified and interpreted

1.2 Existing fatigue management plans, policies and procedures are obtained and reviewed

1.3 Internal risks concerning the potential effects of fatigue are identified or confirmed and reviewed

1.4 External risks within the organisational services and/or products supply chain concerning the potential effects of fatigue are identified or confirmed and reviewed in accordance with fatigue management regulations and the related chain of responsibility

**2 Establish and improve fatigue management policy and procedures**

2.1 Organisational fatigue risk management system implementation plan is developed or reviewed and improved

2.2 Organisational fatigue risk management policy and procedures are developed or reviewed and improved in conjunction with relevant personnel

2.3 Feedback is obtained on the implementation plan and related policies and procedures from key stakeholders internal and external to the organisation

2.4 Appropriate adjustments are made to the plan, policies and procedures based on the feedback received

2.5 Managerial approval for the fatigue risk management system implementation plan and related policies and procedures is obtained in accordance with organisational procedures

2.6 Fatigue risk management system implementation plan and the related policies and procedures are distributed and presented to relevant organisational personnel for implementation

**3 Act upon reports on the implementation of fatigue management policy**

3.1 Reports from designated personnel on the implementation of the organisational fatigue risk management system implementation plan and related policies and procedures are received and interpreted

3.2 Accidents and safety incidents are reviewed and/or investigated and analysed to identify the extent to which

fatigue might have been a contributing factor

3.3 Information provided in the reports indicating that fatigue management policy and procedures are not being correctly implemented is analysed and an appropriate managerial response and related action is initiated

3.4 Opportunities for improvements to the organisational fatigue risk management system implementation plan and related policies and procedures are identified and appropriate action is taken to make the necessary adjustments

#### **4 Act upon identified fatigue management regulations breaches**

4.1 Identified or reported fatigue management policy breaches are investigated in accordance with organisational procedures and regulatory requirements

4.2 Action is taken to ensure internal and/or external personnel who may have contributed to any breach of fatigue management policy are provided with appropriate feedback and information to avoid recurrence of the breakdown in planned fatigue management processes

4.3 Where organisational procedures or culture is found to have contributed to a breach in fatigue management policy, appropriate action is taken to improve procedures or to address the culture in ways that aim to avoid a recurrence of the breakdown in planned fatigue management processes

4.4 Report on breaches of fatigue management policy is prepared and submitted to designated personnel with details of action taken to prevent a recurrence, in accordance with organisational procedures

#### **5 Ensure that operations systems are compliant with fatigue management regulations and policy**

5.1 All operations systems and standard operating procedures are reviewed in terms of their compliance with the organisational fatigue management regulations and policy

5.2 Where necessary, changes are made to operations systems and standard operating procedures to ensure that they are compliant

5.3 In accordance with the chain of responsibility principles, appropriate discussions are held with relevant personnel in supplier or subcontractor companies in the organisational supply chain to ensure their operational systems and standard operating procedures are compliant with the fatigue management regulations and policy

- 6 Plan and organise adequate resources and operational systems**
- 6.1 Organisational budgets and resource allocation strategies are planned to provide adequate resources for the implementation of the organisational fatigue risk management system
  - 6.2 Periodic reviews are undertaken of budgetary and resource allocation arrangements as they relate to implementing the organisational fatigue risk management systems and appropriate improvements are made as required
- 7 Facilitate the training and assessment of staff on fatigue management policy and procedures**
- 7.1 Organisational training systems are planned to provide competency-based on-the-job and off-the-job training and assessment opportunities as detailed in the organisational strategic plan
  - 7.2 Team leaders, supervisory and training staff are provided with adequate opportunities to develop the required expertise to contribute to the organisational fatigue management training and assessment activities
  - 7.3 Periodic reviews are undertaken of fatigue management training systems and appropriate improvements are made as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF4064A Manage fatigue management policy and procedures.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF4064 Manage fatigue management policy and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in legislation and regulations as they relate to fatigue management
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when implementing the organisational fatigue risk management system
- facilitating systems that assist employees to identify their own learning needs about fatigue management
- modifying activities and taking appropriate initiative to manage the implementation of an organisational fatigue risk management system depending on differing contexts, risk situations and environments
- organising audits and reviews of an organisation's fatigue risk management system
- planning and organising budgetary requirements and resource allocation for implementing an organisational fatigue risk management system
- reading and interpreting documentation on fatigue management legislation and the organisational fatigue risk management system and applying them to management activities
- recognising breaches of fatigue management strategies and regulations and taking appropriate action in accordance with the organisational fatigue risk management system.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- budgetary and resource requirements for implementing an organisational fatigue risk management system
- causes and effects of fatigue on employees
- components of a fatigue risk management system, and policies and procedures related to fatigue management, and the control of factors that can contribute to fatigue and

fatigue-related accidents

- factors that increase fatigue-related errors and accidents
- fatigue reduction and proofing strategies available to an organisation that can minimise the risk of errors and safety incidents due to fatigue such as assigning low risk tasks to periods when fatigue risk is higher
- how fatigue affects workplace performance
- how fatigue contributes to workplace accidents
- lifestyles that promote the effective long-term management of fatigue
- options and resources for providing training and learning opportunities for employees about fatigue management and implementing an organisational fatigue risk management system, including initial induction training, in-depth training on fatigue and fatigue management techniques, remedial training where existing competence is assessed as being insufficient, and refresher training on fatigue management
- procedures for auditing and reviewing an organisational fatigue risk management system and related policies and procedures, and for reporting audit outcomes
- processes and resources for assessing employee fatigue management competence
- relevant legislation, regulations, permit and licence requirements related to fatigue management
- relevant work health and safety (WHS)/occupational health and safety (OHS) regulations as they relate to fatigue
- responsibilities of an organisation and individual employees for implementing fatigue management regulations and policies, including requirements agreed with suppliers and sub-contractors in the supply chain about organisational services and products
- risks and hazards created by workplace fatigue
- sources of information on fatigue
- strategies and ways to manage fatigue
- strategies for ensuring that the investigation and analysis of errors, safety incidents and accidents identify the extent to which fatigue is a contributing factor
- systems for auditing the effectiveness and efficacy of organisational fatigue risk management strategies, policies and procedures
- ways of recognising fatigue.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational

situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## TLIF4086 Control and coordinate incident responses

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to control and coordinate incident responses in accordance with organisational and regulatory procedures.

It includes applying emergency response principles when responding to an incident, coordinating incident response activities and completing follow-up actions.

Work must be carried out in compliance with relevant regulations and workplace procedures concerning action to be taken in an emergency.

Work is performed under minimal supervision generally in a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

F – Safety Management

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Respond to incident**
  - 1.1 Details of incident are received, analysed, confirmed and prioritised
  - 1.2 Hazards are identified, risks are assessed and control measures are implemented
  - 1.3 Immediate coordination requirements are identified and actioned in accordance with organisational and regulatory procedures
- 2 Coordinate incident response activities**
  - 2.1 Control and coordination of incident response activities are assumed, and relevant personnel and other authorities are informed of this action
  - 2.2 Assistance to be provided to clients and operators is arranged in accordance with rail safety worker duty of care responsibilities and organisational requirements
  - 2.3 Assistance is provided to relevant authorities in accordance with workplace policy and legislative requirements
  - 2.4 Information is collected and passed on to relevant personnel/stakeholders in accordance with workplace procedures
- 3 Complete follow-up actions**
  - 3.1 Details of incident are collected, recorded and managed in accordance with organisational procedures
  - 3.2 Contribution is made to debrief process and recommendations are prepared and submitted, as required
  - 3.3 Documentation relating to the implementation and coordination of incident responses is completed in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF4086A Control and coordinate incident responses.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF4086 Control and coordinate incident responses

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- applying relevant legislation, regulations, codes of practice, procedures and guidelines concerning incident response
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, regulations, codes of practice, procedures and guidelines
- collaborating with others
- communicating clearly and effectively with others
- identifying involvement of the following in an incident:
  - Australian Dangerous Goods (ADG) Code and International Maritime Dangerous Goods (IMDG) Code markings
  - containers and goods coding
  - emergency information panels
  - implementing contingency plans
  - interpreting and following operational procedures and prioritising work
  - modifying activities depending on operational contingencies, risk situations and environments
- reporting and rectifying faults and malfunctions promptly in accordance with rail safety worker duty of care responsibilities, regulatory requirements and workplace procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency management plan
- layout of area under control, and potential obstacles for responding parties
- means to control an incident and to provide practical assistance where required
- procedures for contacting emergency services personnel and other relevant stakeholders
- relevant legislation, regulations, codes of practice, procedures and guidelines concerning incident response
- relevant WHS/OHS legislation, regulations, codes of practice, procedures and guidelines concerning incident response
- risks, hazards and related precautions to control risk
- types of incidents that can occur and appropriate action to be taken in each case.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

# **TLIF4088 Implement and coordinate rail safety and WHS risk-control strategies**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to implement and coordinate rail safety and work health and safety (WHS)/occupational health and safety (OHS) risk management strategies, in accordance with regulatory and legislative requirements.

It includes accessing rail safety and WHS/OHS information, developing risk-control procedures, selecting and implementing risk controls, and contributing to monitoring and evaluating their effectiveness.

This unit covers the requirements to implement and coordinate rail safety and WHS/OHS risk management strategies and to identify, assess and control risks associated with people, plant, environment, rail infrastructure, and associated interfaces.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

F – Safety Management

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

### **ELEMENTS**

### **PERFORMANCE CRITERIA**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Access information about rail safety, WHS/OHS and organisational policies and procedures**

- 1.1 Relevant provisions of rail safety and WHS/OHS legislation and codes of practice are identified
- 1.2 Information on organisational rail safety and WHS/OHS policies and procedures is stored in a readily accessible location and manner
- 1.3 Information is accurately interpreted and clearly explained to the appropriate personnel

**2 Develop options to control rail safety and WHS/OHS risks**

- 2.1 Hazard register, outcomes of previous incident investigations, and risk assessments are reviewed to identify possible rail safety and WHS/OHS hazards and/or risks requiring control action
- 2.2 Rail safety, WHS/OHS legislation and standards are used to develop a range of options to control specific risks in the workplace
- 2.3 Principles of the hierarchy of control are applied when developing risk-control options
- 2.4 Input is sought from stakeholders and workplace personnel as required
- 2.5 Advice from rail safety officers and WHS/OHS specialists and technical advisors is sought as required

**3 Select appropriate options to control rail safety and WHS/OHS risks**

- 3.1 Outcomes of risk assessments are used to select appropriate options to control risks
- 3.2 Selected risk controls are prioritised
- 3.3 Factors that may potentially limit effectiveness of controls are identified
- 3.4 Stakeholders and workplace personnel are consulted when selecting appropriate control options as required
- 3.5 Recommended risk controls are communicated to stakeholders and workplace personnel

**4 Implement rail safety and WHS/OHS risk controls**

- 4.1 Appropriate authority and relevant resources to implement controls are identified and applied

- 4.2 Actions required to control risks are implemented
- 4.3 Stakeholders and workplace personnel are consulted with and involved in implementing risk controls
- 5 Contribute to monitoring and evaluating the effectiveness of risk controls**
  - 5.1 Effectiveness of implemented risk controls is evaluated, in consultation with stakeholders as required
  - 5.2 Compliance with any new procedures is monitored and documented in accordance with organisational procedures
  - 5.3 Workplace sources of information and data are accessed if required, to evaluate effectiveness of risk controls and to check for new hazards introduced as a result of controls
  - 5.4 Areas for further improvement are identified in consultation with stakeholders and appropriate action is taken
  - 5.5 Assistance is provided in developing and documenting an improvement plan when requested

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF4088A Implement and coordinate rail safety and OH&S risk-control strategies.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIF4088 Implement and coordinate rail safety and WHS risk-control strategies

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and rectifying within limits of own role, problems, faults and malfunctions
- reviewing previous incidents and hazard register for relevant existing workplace risk management controls.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency management plan and evacuation procedures
- housekeeping standards and procedures
- rail safety management system
- relevant rail safety and work health and safety (WHS)/occupational health and safety (OHS) legislation, procedures and guidelines
- reporting procedures for unsafe situations, hazards and workplace risks
- signs and signals used for WHS/OHS warnings.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including safety management system, workplace procedures, regulations, rules, codes of practice and operation manuals.

# **TLIF4090 Implement safeworking rules and regulations for network control activities**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to implement and coordinate systems of safeworking rules and regulations for network control activities.

It includes implementing safeworking rules and regulations; applying and managing safeworking protocols and communications; and taking appropriate action in safety incidents, unsafe situations or emergencies.

Work is performed using established operational procedures, with accountability and responsibility for self and others in achieving the prescribed outcomes with terminology as defined by the applicable Rail Infrastructure Manager safeworking system .

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

It covers the activities required by network control officers in the operation of safeworking procedures within their area of control.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

F – Safety Management

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Conduct network control activities following safeworking rules and procedures**

1.1 Relevant rules for the applicable safeworking system are followed when carrying out network control activities as part of rail operation

1.2 Hazards are identified, risks are assessed and control measures are implemented

1.3 All network control activities are conducted in compliance with relevant state/territory safeworking rules and regulations

1.4 Requirements of the safeworking systems are implemented and managed in accordance with applicable safeworking system rules and regulations

#### **2 Apply and manage communications**

2.1 Communication protocols are applied and managed in accordance with applicable safeworking system requirements

2.2 Authorities required by safeworking systems are issued in accordance with applicable safeworking system rules and regulations using communication systems

2.3 Appropriate records of communications are managed as required within the applicable safeworking system rules, regulations and procedures

#### **3 Apply safeworking protocols**

3.1 Relevant protocols are managed as specified in the applicable safeworking system rules and regulations

3.2 Appropriate records and documentation pertinent to safeworking protocols are completed and managed in accordance with the requirements of the applicable safeworking system rules and regulations

#### **4 Take action in unsafe situations or emergencies**

4.1 Unsafe situations are identified in accordance with the requirements of applicable safeworking system rules and regulations

4.2 Where a safety incident, emergency or unsafe situation has been identified, appropriate action is taken to report and/or control the incident or situation in accordance with the requirements of applicable safeworking system

rules and regulations

- 4.3 Appropriate records and documentation of an identified unsafe situation, emergency or safety incident are maintained in accordance with the requirements of applicable safeworking system rules and regulations and organisational procedures
- 4.4 Reports of the identified unsafe situation, emergency or safety incident are completed in accordance with organisational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF4090A Implement safeworking rules and regulations for network control activities.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF4090 Implement safeworking rules and regulations for network control activities

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking system and workplace procedures
- communicating effectively with others
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- reading, interpreting and following relevant rules, regulations and instructions
- working collaboratively with others to fulfil safeworking requirements applicable to the rail operations concerned.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- action to be taken in safety incidents, identified unsafe situations and emergencies applicable to own area of responsibility and/or control
- communications protocols as they relate to the functions of the safeworking systems concerned
- emergency management plan
- relevant work health and safety (WHS)/occupational health and safety (OHS), rail safety and environmental protection legislation and policies
- route integrity requirements, including general requirements, position of points and route occupancy requirements
- safeworking system rules and protocols applicable to own area of responsibility and/or control
- safeworking system types, requirements and limitations
- safeworking systems and occupancy authority

- terminology as defined by the applicable Rail Infrastructure Manager system of safeworking including workplace procedures, regulations, rules and codes of practice.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

# TLIF4099 Develop an application for, or variation to, rail accreditation

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to develop an application for or variation to rail safety accreditation.

This unit covers the requirements to develop an application for new rail transport operator accreditation and/or for a variation to current accreditation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify application requirements

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Documentation and requirements relevant to the application for or variation to accreditation is accessed and interpreted

- 1.2 Policies and objectives that express the organisation's commitment to regulatory compliance management are developed
  - 1.3 Plan is prepared for the development of compliance requirements
  - 1.4 Required resources are identified and maintained to support the plan and approval from relevant personnel is gained
  - 1.5 Framework for the regulatory compliance management system is established and implemented
  - 1.6 Scope of proposed compliance requirements and resources is determined in consultation with relevant personnel and regulatory compliance is integrated into relevant documentation
  - 1.7 Consultation process is documented, information on the regulatory compliance system and procedures is explained and ready access to this information by all relevant stakeholders is ensured
- 2 Collate, compile and submit application**
- 2.1 Relevant documentation relating to governance, scope of operations, safety management system and procedures to meet application requirements is collected
  - 2.2 Endorsement and sign off of documents by relevant authorising officers is ensured
  - 2.3 Required resources to meet scope of operations are identified and documented
  - 2.4 Completed application with supporting evidence is verified prior to sign off by senior management
  - 2.5 Finalised application is submitted to relevant jurisdiction regulatory body
  - 2.6 Requests for further details or additional information are acted upon in a timely manner

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF4099A Develop an application for, or variation to, rail accreditation.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIF4099 Develop an application for, or variation to, rail accreditation

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in legislation and regulations as they relate to rail accreditation application activities
- applying relevant legislation and workplace procedures
- communicating effectively with others
- developing a new application, exemption, notification of change or variation to an accreditation
- identifying relevant internal and external contact people
- reading and interpreting relevant documentation
- working collaboratively with employees and management.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- components of and policies and procedures related to rail accreditation systems
- organisational systems for risk management and risk mitigation
- relevant legislation, regulations, permit and licence requirements related to rail accreditation and rail safety management systems
- responsibilities of organisation and individual employees related to rail accreditation systems
- workplace procedures and instructions for notifiable occurrence reports.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIF4100 Identify and meet rail safety regulatory compliance requirements

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to identify and meet rail safety regulatory requirements.

It involves interpreting rail safety legislation for specific scope and nature of rail transport operator railway operations.

Rail safety regulatory compliance requirements can be defined by a range of rail safety operating principles such as:

- identifying and managing risk
- protecting persons from injury
- protecting property from damage
- ensuring emergencies and incidents are properly managed
- ensuring interfaces between different organisations are properly defined and managed
- track access
- train separation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Establish rail regulatory requirements**

- 1.1 Legislation applicable to organisational railway operations is confirmed
- 1.2 Issues relating to rail safety regulation are determined in accordance with legislation, and the impact of these issues on railway operations and management, rail safety and systems interfaces is identified

### **2 Maintain currency in regulatory requirements**

- 2.1 Changes in safety regulation are monitored and the implications of these changes for rail industry operations and technology are identified
- 2.2 Changes in rail safety regulatory requirements are monitored and available information, training and awareness sessions are accessed to maintain knowledge and skill base
- 2.3 Regular contact and information exchange with appropriate personnel within the railway organisation are undertaken to ensure compliance with regulatory requirements

### **3 Apply knowledge of rail regulatory requirements**

- 3.1 Rail safety operating principles are identified and confirmed
- 3.2 Applicable current national and international standards, codes and local rules are identified and the relevance of these rules to rail safety regulation is confirmed
- 3.3 Accreditation requirements and/or conditions applicable to organisational railway operations are identified
- 3.4 Requirements of rail industry standards applicable to organisational railway operations are identified in the context of safety management systems and risk management
- 3.5 Implications of using particular rail industry standards for rail safety compliance are explained as required, in accordance with organisational needs

### **4 Identify principles underpinning rail**

- 4.1 Role, function and purpose of co-regulation in the rail industry are identified and explained

**safety regulation**

4.2 Role, function and purpose of an organisational safety management system and accreditation in the context of legislation and guidelines are identified

4.3 Functions and obligations of duty holders and their general duties in the context of rail safety legislation are identified

**5 Establish and maintain rail regulatory relationships**

5.1 Appropriate regulatory channels are identified and lines of communication are established and maintained

5.2 Interests and requirements of the organisation are represented and promoted

5.3 Feedback is exchanged and used to improve regulatory outcomes

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

**Unit Mapping Information**

This unit replaces and is equivalent to TLIF4100A Identify and meet rail safety regulatory compliance requirements.

**Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF4100 Identify and meet rail safety regulatory compliance requirements

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and using relevant rail safety industry standards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- identifying, networking and establishing relationships with a diverse range of rail industry stakeholders
- identifying regulatory requirements
- interpreting complex information relating to rail safety regulation and communicating this to team members
- researching information relevant to the rail industry, including rail safety regulations
- reviewing and communicating regulatory information changes.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- changes in rail industry operations and technology and the implications for rail safety regulation
- duty holders and their duties under rail safety national law
- key concepts and definitions relating to rail safety national law regulation
- key principles and practices associated with railway operations
- key regulatory and standards participants in the rail industry
- organisational systems for risk management and risk mitigation
- rail industry and rail industry terminology, including terminology used in technical standards
- rail regulatory framework

- rail safety management systems
- relevance of national and international standards to the rail industry
- role of Rail Industry Safety and Standards Board (RISSB).

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

applicable documentation including workplace procedures, rail safety national law regulations, codes of practice and operation manuals.

# TLIF4101 Implement and maintain a rail safety culture

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to implement and maintain a rail safety culture within a rail organisation in accordance with organisational safety management system.

People achieving competence in this unit must be able to assess compliance with safety culture requirements and confirm that organisational policies and practices are consistent with principles that support the development of a positive safety culture.

Applying this unit in the workplace will involve promoting the benefits of developing a positive safety culture such as:

- awareness and recognition of safety improvement opportunities
- encouraging open communication
- executive safety role of line management
- importance of leadership and commitment of senior management
- positively addressing human factors
- involving rail safety workers at all levels
- promoting a just culture and environment
- willingness to devote resources to safety.

A just culture and environment are based on occurrence investigation, which acknowledges human error and encourages honest reporting of errors while establishing clear accountability for errors.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Explain key principles relating to a rail safety culture**

1.1 Current information related to rail safety is obtained and confirmed in accordance with organisational policies and procedures

1.2 Principles that encourage a rail safety culture are identified and promoted to people within an organisation in accordance with organisational policies, procedures and guidelines

### **2 Apply rail safety culture to organisational activities**

2.1 Concepts related to a positive rail safety culture are promoted to people within an organisation using appropriate communications strategies

2.2 Integration of a positive rail safety culture within an organisation is identified and implemented

2.3 Rail safety information is used to cross-check the presence or absence of a rail safety culture within all organisational rail safety documentation and practices

2.4 Rail safety culture is applied equally with engineering, technical and other factors that reduce the potential for incidents

2.5 Documentation that includes information related to the safety culture are clearly expressed in appropriate terms, to reinforce general understanding within an organisation

2.6 Behaviours and skills required for safe and effective work performance are identified and their contribution to a rail safety culture is promoted within an organisation

### **3 Review safety culture within an organisation**

3.1 Behaviour of personnel is monitored to determine whether a positive rail safety culture exists

3.2 Resources committed to rail safety activities relative to the

size and complexity of operations are evaluated

- 3.3 Attitudes, behaviours or systems that might be detrimental to a positive rail safety culture are identified and corrective actions are determined
- 3.4 Evidence of just culture principles are identified and promoted in accordance with organisational policies and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF4101A Implement and maintain a rail safety culture.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF4101 Implement and maintain a rail safety culture

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating relevant information
- conducting a review of rail safety culture within an organisation/project
- identifying available media for dissemination of rail safety information
- identifying positive rail safety culture factors
- influencing others positively
- reading and comprehending relevant complex and formal documents, such as literature and guidelines
- researching information
- solving problems.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate safety survey tools
- behavioural marker system for rail safety
- concept and key elements of a positive rail safety culture
- key principles relating to rail safety culture
- legislation and guidelines relating to rail safety culture
- organisational policies, procedures and systems relating to developing and maintaining a positive rail safety culture
- organisational systems for risk management and risk mitigation
- principles and application of rail safety
- rail environment.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## **TLIF4102 Implement and maintain safety management plans**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to implement and maintain rail safety management plans.

It includes identifying safety management plans appropriate to organisational activities, implementing plans, monitoring their effectiveness, and identifying and reporting on non-compliance issues.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

F – Safety Management

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

Elements describe the            Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

### **1 Identify appropriate rail safety management plans**

- 1.1 Compliance documentation relevant to rail safety for the activities being carried out is accessed and interpreted
- 1.2 Relevant personnel are consulted about the content of rail safety management plans
- 1.3 Rail safety management plans are developed or adapted to meet organisational and regulatory requirements
- 1.4 Strategies for managing ongoing changes that may affect rail safety management plans are identified and communicated to relevant organisational personnel
- 1.5 Information relating to rail safety management plans is disseminated to organisational personnel in appropriate language, style and format
- 1.6 Implications of non-compliance are clarified with relevant organisational personnel

### **2 Implement rail safety management plans**

- 2.1 Implementation of rail safety management plans is planned in collaboration with others to ensure compliance with rail safety management systems (SMSs) and organisational requirements
- 2.2 Implementation of rail safety management plan work activities is monitored to ensure compliance with rail SMSs and organisational requirements
- 2.3 Training needs of personnel are identified and supported to ensure they meet their rail safety management workplace responsibilities

### **3 Monitor rail safety management plans**

- 3.1 Actual and potential problems relating to rail safety compliance within the workplace are identified and reported
- 3.2 Identified problems are reported to appropriate personnel to ensure compliance with rail SMSs and organisational requirements
- 3.3 Identified non-compliance is reported and recorded in accordance with legislative requirements and organisational policies and procedures
- 3.4 Recommendations on improvements to rail safety management plans are submitted to appropriate personnel in accordance with organisational and/or regulatory

requirements

- 3.5 Records are maintained in accordance with organisational and regulatory requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF4102A Implement and maintain safety management plans.

# Assessment Requirements for TLIF4102 Implement and maintain safety management plans

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to any changes in legislation and regulations as they relate to rail safety management systems (SMSs)
- applying relevant legislation and workplace procedures
- communicating effectively with others
- identifying breaches of organisational rail SMSs and taking appropriate action, in accordance with organisational policies and procedures
- identifying rail SMSs for a particular activity
- modifying activities and taking appropriate actions to manage the implementation of organisational rail safety management plans depending on contexts, risk situations and environments
- monitoring rail SMSs
- reading, interpreting and applying relevant documentation
- undertaking compliance monitoring and reviews of organisational rail SMSs
- working collaboratively with employees and management to implement organisational rail SMSs.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- components of rail SMSs and plans
- options and resources for providing training and learning opportunities for employees about rail safety management
- procedures and tools for monitoring and reviewing rail safety management plans, and related policy and procedures
- relevant legislation, regulations, permit and licence requirements relating to rail safety

management

- responsibilities of organisation and employees for implementing rail safety management plans
- SMSs.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

## **TLIF4103 Implement fitness for work procedures**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to implement fitness for work policy and procedures in an organisation, in compliance with the relevant fitness for work regulations and requirements.

It includes identifying legal requirements, liabilities and responsibilities; establishing and/or improving implementation plans, and related policy and procedures; and acting appropriately on reports about the implementation of fitness for work policy and identified breaches of associated regulations.

It also includes ensuring that the operation's systems are compliant with rail safety national law, regulations and organisational procedures, and establishing, implementing, monitoring and communicating fitness for work programs.

Work is performed under some supervision generally within a team environment. It involves implementing and monitoring fitness for work policies and procedures as part of workplace activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

F – Safety Management

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Confirm regulatory requirements and organisational responsibilities**

- 1.1 Current regulatory requirements, obligations and responsibilities for fitness for work within an organisation are identified and interpreted
- 1.2 National health assessment standards for rail safety workers and/or other applicable state/territory standards are accessed and interpreted
- 1.3 Current regulatory requirements, obligations and responsibilities regarding the use of drugs and alcohol by rail safety workers are identified and interpreted
- 1.4 Current regulatory requirements, obligations and responsibilities regarding fatigue management of rail safety workers are identified and interpreted

### **2 Implement fitness for work policy and procedures**

- 2.1 Organisational fitness for work policy is implemented in conjunction with relevant personnel
- 2.2 Organisational fatigue management program is implemented
- 2.3 Drug and alcohol program is implemented in accordance with organisational policies and procedures
- 2.4 Health assessment program is implemented in accordance with organisational procedures and regulatory requirements
- 2.5 Fitness for work risk management system implementation plan and related policy and procedures are accessed and interpreted
- 2.6 Identified non-conformance with fitness for work is reported in accordance with organisational procedures and regulatory requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF4103A Implement fitness for work procedures.

# Assessment Requirements for TLIF4103 Implement fitness for work procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in legislation and regulations as they relate to fitness for work
- applying rail safety national law, regulations and workplace procedures
- communicating effectively with others
- monitoring and identifying non-conformance of organisation's fitness for work management systems and programs, and taking appropriate action
- reading and interpreting relevant documentation
- working collaboratively with employees and management to implement organisation's fitness for work management system.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- components of a fitness for work risk management system
- drug and alcohol policy and procedures
- drug and alcohol testing and reporting requirements
- fatigue management policy and procedures
- health and fitness management program
- health assessment requirements
- legislated rail safety worker medical requirements
- relevant legislation and regulations relating to fatigue management, drug and alcohol use, and medical requirements in the rail industry
- responsibilities of organisation and employees for implementing fitness for work regulations and policies
- systems for monitoring non-conformance of the effectiveness of organisation's fitness for

work management strategies, policies and procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

# TLIF4104 Manage change in the rail safety environment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to manage change in a rail safety environment and associated risks. Change may be required because of organisational restructuring or the introduction of new equipment, systems or practices.

It includes establishing the context for change, developing a risk management strategy, advertising workplace change, implementing a change management strategy and monitoring change process outcomes.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines and rail regulations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the                      Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

### **1 Establish the context for change**

1.1 Requirement for change is confirmed through consideration of changes to legislation, business or organisational requirements

1.2 Key stakeholders are identified and consulted on proposed change

1.3 Benchmarking is conducted with other similar organisational/functional/best practice standards to confirm preferred methodology for managing change

1.4 Specialists and experts are consulted as required to assist in identifying major change requirements or opportunities

1.5 Overall life cycle and phases of change are identified

### **2 Develop risk management strategy**

2.1 Risk assessment is conducted to identify risks and hazards related to change

2.2 Identified risks are evaluated and controls are established so far as is reasonably practicable in accordance with organisational policy and procedures

2.3 Responsibility for managing established controls is determined

### **3 Develop implementation plan**

3.1 Complexity of change is identified and appropriate phases and transition plans are developed

3.2 Communications strategy is developed in collaboration with key stakeholders

3.3 Modifications to systems and infrastructure are identified

3.4 Resources required to implement change are identified

3.5 Affected personnel and required training/up skilling is identified

3.6 Updating of risk registers and other safety documentation is identified

3.7 Procedures for post implementation monitoring and review are established

3.8 Changes are documented and approval by key stakeholders is obtained in accordance with regulatory and organisational requirements

- 4 Communicate workplace change**
- 4.1 Anticipated change is advertised to appropriate organisational personnel who will be affected by change
  - 4.2 Range of strategies is used to foster a positive attitude to change, especially from individuals on whom organisational change will have the most effect
  - 4.3 Advice is provided to key stakeholders on strategies for effective change management and sensitivity is shown to people's individual responses to change
  - 4.4 Leadership and communications strategies are used to assist others to deal with ambiguity and to adapt to change
- 5 Implement workplace change**
- 5.1 Policies, practices and procedures are altered and implemented as required to support change management strategy
  - 5.2 Modifications to systems and infrastructure are implemented
  - 5.3 Required training/up skilling of affected personnel is facilitated
  - 5.4 Risk registers and other safety documentation are updated to reflect implemented change
- 6 Monitor and review change process and outcomes**
- 6.1 Organisational safety management system is reviewed and revised to reflect change
  - 6.2 Ongoing process are monitored following implementation of change to ensure it is meeting organisational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF4104A Manage change in the rail safety environment.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIF4104 Manage change in the rail safety environment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in relevant legislation and regulations
- applying relevant legislation and workplace procedures
- communicating effectively with others, including using appropriate words and language structure to explain complex ideas
- conducting a review of an implemented change within an organisation
- conducting risk assessments
- consulting with stakeholders
- developing a plan to implement a specific change within an organisation
- identifying barriers to change within an organisation
- implementing a specific change within an organisation
- interpreting and explaining complex, formal documents and assisting others to apply these in the workplace
- monitoring change management strategies
- preparing written advice and reports
- working collaboratively with employees and management.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- change management strategies
- key factors in the internal and external operating environment
- negotiation processes
- organisational goals, policies and procedures
- organisational systems for risk management and risk mitigation

- relevant rail safety national law, regulations and requirements related to managing change
- safety management systems.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

# TLIF4105 Manage rail safety compliance

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to manage rail safety compliance requirements.

It includes planning, establishing, maintaining, monitoring and reviewing compliance, consultation and audit procedures, feedback procedures and auditing systems.

This unit is intended for rail safety workers involved in managing rail safety compliance functions within a rail organisation.

Typically these rail safety workers must be able to work independently and as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the                      Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

**1 Plan and establish a rail safety compliance framework**

- 1.1 Rail safety compliance documentation relevant to organisational activities is accessed, interpreted and applied
- 1.2 Policies and objectives that express organisational commitment to rail safety compliance are developed in collaboration with relevant personnel
- 1.3 Rail safety compliance system framework is established and implemented in accordance with organisational requirements/operations
- 1.4 Scope of proposed rail safety compliance requirements and required resources are determined in consultation with relevant personnel
- 1.5 Rail safety compliance is integrated into job descriptions and relevant organisational procedures
- 1.6 Procedures are established to ensure information related to rail safety compliance is readily accessible to relevant stakeholders
- 1.7 Approval for establishing rail safety compliance system is sought as required from relevant personnel

**2 Establish consultation and audit procedures**

- 2.1 Relevant stakeholders are identified and systems procedures for maximising opportunities to implement rail safety compliance are developed and documented
- 2.2 Relevant stakeholders are consulted on rail safety compliance requirements and information is used to establish monitoring and auditing systems
- 2.3 Resource allocation for implementing compliance requirements are identified and reported in accordance with organisational and relevant legislative requirements
- 2.4 Measures are established in collaboration with relevant stakeholders to ensure compliance with organisational objectives through validating processes

**3 Implement, maintain and review a rail safety compliance system**

- 3.1 Rail safety management system (SMS) is implemented in accordance with organisational and regulatory requirements
- 3.2 System effectiveness is assessed against organisational and

regulatory requirements

- 3.3 Rail SMS is audited in accordance with established procedures
- 3.4 Audit procedures are reviewed regularly to identify necessary changes and opportunities for continual improvement

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIF4105 Manage rail safety compliance

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in relevant legislation and regulations
- applying relevant legislation and workplace procedures
- auditing a rail safety compliance system
- communicating effectively with others
- identifying or establishing rail safety compliance within an organisation
- monitoring activities and taking appropriate action to manage different contexts, risk situations and environments
- organising audits and reviews of an organisation's safety compliance system
- reading and interpreting relevant documentation, and applying acquired information/knowledge to management activities
- recognising non-conformance within rail safety requirements and taking appropriate action to rectify, in accordance with organisational policies and procedures
- working collaboratively with employees and management to implement an organisation's safety compliance system.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- auditing principles and practice
- components of a rail safety compliance system
- options and resources for providing training and learning opportunities for employees about rail safety compliance
- organisational systems for risk management and risk mitigation
- procedures and tools for monitoring and reviewing organisation's rail safety compliance

- system and related policy and procedures, and for reporting outcomes
- relevant legislation, regulations, permit and licence requirements relating to rail safety compliance
  - responsibilities of organisation and employees for implementing a rail safety compliance system.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIF4107 Respond to notifiable rail safety occurrences

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to respond to notifiable rail safety occurrences in accordance with legislation, regulatory requirements and organisational procedures.

It includes identifying notifiable occurrences, completing and submitting documentation, conducting internal investigations and assisting with external investigations, in accordance with organisational procedures and relevant safeworking requirements.

This unit applies to notifiable rail safety occurrences as they relate to rail safety national law and regulations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Identify legislative and regulatory requirements for reporting notifiable occurrences**
  - 1.1 Legislative and regulatory requirements for reporting notifiable rail safety occurrences are identified and accessed
  - 1.2 Individual state/territory requirements for reporting notifiable rail safety occurrence are accessed and interpreted
  - 1.3 Applicable state/territory documentation required for reporting notifiable rail safety occurrences is accessed and interpreted
  - 1.4 Legislative and state/territory requirements for reporting notifiable rail safety occurrences are communicated to relevant organisational personnel
- 2 Complete and submit notifiable occurrence documentation**
  - 2.1 Notifiable rail safety occurrence is checked against documentation to determine appropriate manner and timing for reporting occurrence
  - 2.2 Reporting documentation for notifiable rail safety occurrence is retrieved, completed and submitted in accordance with regulatory requirements
  - 2.3 Top event in the notifiable occurrence is identified and reported in accordance with regulatory requirements
- 3 Contribute to investigating a notifiable occurrence**
  - 3.1 Contribution is made to investigating a notifiable rail safety occurrence in accordance with organisational safety management system requirements
  - 3.2 Evidence is collected and managed in accordance with organisational procedures and regulatory requirements
  - 3.3 Organisational information is managed appropriately to ensure consistency between multiple agency investigations
  - 3.4 Confidentiality is maintained in accordance with organisational and regulatory requirements
  - 3.5 Occurrence reports including recommendations and/or lessons learnt are submitted to relevant personnel in accordance with regulatory requirements and organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF4107A Respond to notifiable rail safety occurrences.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIF4107 Respond to notifiable rail safety occurrences

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others verbally and in writing
- completing a notification form for an identified notifiable occurrence
- completing a report on a notifiable occurrence
- identifying a top event from a notifiable occurrence
- identifying notifiable occurrence legislative and regulatory requirements
- interpreting and following operational instructions and prioritising work
- reading and interpreting relevant instructions, procedures and information
- working collaboratively with others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- information and evidence collection and preservation techniques for notifiable occurrences
- principles of a just culture as applied to investigating notifiable occurrences
- relevant legislation, rail safety national law, regulations, permit and licence requirements relating to rail safety management systems (SMSs)
- requirements for investigating and reporting notifiable occurrences
- requirements of organisational SMSs and incident management plans
- workplace procedures and instructions for notifiable occurrence reports.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

## **TLIF4109 Communicate effectively to coordinate incident response procedures**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to communicate effectively to coordinate incident response procedures in accordance with organisational procedures.

It includes responding to the incident, coordinating incident responses, communicating effectively and completing follow-up actions.

Work must be carried out in compliance with emergency management plans and workplace procedures about action to be taken in an emergency, incident, fire or accident.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

F – Safety Management

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Respond to reported incidents**
  - 1.1 Details of incidents are received, analysed, confirmed and prioritised
  - 1.2 Immediate coordination requirements are identified and actioned in accordance with organisational procedures
- 2 Coordinate incident response activities**
  - 2.1 Control and/or coordination of incident response activities is assumed and all relevant personnel and other authorities are informed of this action
  - 2.2 Assistance to be provided to clients and operators is arranged within duty of care limitations and organisational requirements
  - 2.3 Assistance is provided to relevant authorities in accordance with organisational policies and legislative requirements
  - 2.4 Information is collected and passed on to relevant personnel/stakeholders in accordance with workplace procedures
- 3 Convey complex information**
  - 3.1 Complex information is conveyed clearly and accurately
  - 3.2 Recipient understanding of information is monitored and mode of communication is adjusted appropriately
  - 3.3 Interaction is monitored to ensure it is consistent with the urgency of the situation, in accordance with organisational policies and procedures
- 4 Communicate with relevant personnel**
  - 4.1 Information is conveyed clearly and clarified when requested by other parties
  - 4.2 Requirements are communicated clearly and in a manner that reflects an appropriate level of authority
  - 4.3 Direction, advice and assistance is sought as required and is followed as appropriate to the situation
  - 4.4 Difficulties in communication are recognised and resolved using appropriate communication skills and techniques
  - 4.5 Roles and authority of relevant personnel involved in the situation are clarified and respected
- 5 Overcome barriers to communication**
  - 5.1 Barriers to effective communication are identified by continuous monitoring of the situation
  - 5.2 Situational needs are identified, clarified and confirmed using

appropriate communication skills and techniques

5.3 Conflict and potential for conflict are dealt with in a manner that prevents escalation

## **6 Communicate as a team**

6.1 Handover/takeover is performed and full details are communicated to/received from other team members to ensure continuity of incident response

6.2 Team member communications are acknowledged as received and understood

6.3 Observations are verbalised to team members

6.4 Inquiries are made of team members to clarify information required to provide continued incident response

## **7 Complete follow-up actions**

7.1 Details of incident are collected, recorded and managed in accordance with organisational procedures

7.2 Contribution is made to debrief process and recommendations are prepared and submitted as required

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIF4109A Communicate effectively to coordinate incident response procedures.

## **Links**

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF4109 Communicate effectively to coordinate incident response procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- collaborating with others when implementing and coordinating incident response procedures
- completing relevant documentation
- following organisational standards when recording and reporting incident responses
- identifying and following organisational incident response procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reading, interpreting and following relevant instructions, procedures, information.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency management plan and incident response workplace procedures
- hazards, risks and related precautions to control risk
- layout of network/area under control and potential obstacles for responding parties
- means to control and organise incidents and to provide practical assistance as required
- procedures and policies for responding to incidents
- procedures for contacting emergency personnel and other relevant stakeholders
- relevant safeworking system and workplace procedures

- relevant work health and safety (WHS)/occupational health and safety (OHS) and other regulatory codes of practice, procedures and guidelines about responding to incidents
- types of incidents that can occur and the appropriate action to be taken in each case.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, emergency management plan, regulations, codes of practice and operation manuals.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# **TLIF4110 Respond to abnormal situations and emergencies when driving a train**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to respond to abnormal situations and emergencies when driving a train, in accordance with organisational procedures.

It includes identifying and responding to abnormal situations and emergencies when driving a train, arranging follow-on support and assistance, and communicating with personnel and passengers in accordance with organisational procedures and relevant safeworking requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is generally performed without supervision and within a team environment.

It involves the application of organisational procedures and regulatory requirements when responding to abnormal situations and emergencies when driving a train, as part of work activities in a range of contexts across the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

F – Safety Management

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Identify abnormal situations and emergencies when driving a train**

- 1.1 Abnormal situations and emergencies are identified, assessed and prioritised in accordance with workplace emergency response plans and safeworking requirements and procedures
- 1.2 Implications of abnormal situations and emergencies are evaluated in accordance with workplace requirements, and safeworking requirements and procedures
- 1.3 Hazards are identified, risks are assessed and risk control measures are implemented
- 1.4 Options for reporting abnormal situations and emergencies and/or taking action are considered in accordance with organisational procedures and regulatory requirements
- 1.5 Relevant personnel are alerted to abnormal situations and emergencies in accordance with workplace operating and emergency, procedures and plans
- 1.6 Communications are maintained with relevant personnel to determine appropriate course of action

### **2 Respond to abnormal situations when driving a train**

- 2.1 Abnormal situations are responded to in accordance with organisational procedures, received instructions from relevant personnel, regulatory requirements and emergency response plan, as required
- 2.2 Responsibilities are fulfilled in accordance with organisational procedures, and safeworking and/or regulatory requirements
- 2.3 Assistance is provided to relevant personnel as required
- 2.4 Information is provided to relevant personnel as requested in accordance with regulatory and organisational procedures

### **3 Respond to emergencies when driving a train**

- 3.1 Emergency situations are responded to in accordance with organisational procedures, received instructions from relevant personnel, regulatory requirements and

emergency response plan, as required

3.2 Emergencies are handled appropriately in accordance with established response plan and within limits of rail safety worker duty of care responsibilities

3.3 Responsibilities are fulfilled in accordance with organisational procedures, emergency response plan and safeworking and/or regulatory requirements

3.4 Assistance is provided in controlling site prior to and following arrival of emergency services as required

3.5 Assistance is provided to other staff and emergency services personnel conducting initial scene survey as requested

3.6 Directions of controlling emergency services authority are followed and all possible assistance is provided in response to those directions

3.7 Information is provided as requested to relevant emergency services personnel in accordance with regulatory and organisational procedures

#### **4 Communicate with staff and/or passengers**

4.1 Staff and/or passengers are provided with relevant, appropriate and timely advice about abnormal situation or emergency

4.2 Instructions are provided to relevant personnel and/or passengers in accordance with organisational procedures, consistent with the nature of abnormal situation or emergency

4.3 Evacuation procedures for personnel and/or passengers are explained and/or applied as required, in accordance with organisational procedures

4.4 Customer service and safety needs arising from abnormal situations and emergencies are identified and acted on in accordance with regulatory and workplace requirements

#### **5 Follow incident reporting procedures**

5.1 Incident reports are completed accurately in accordance with regulatory requirements and organisational procedures

5.2 Incident reports are processed in accordance with regulatory requirements and organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF4110A Respond to abnormal situations and emergencies when driving a train.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF4110 Respond to abnormal situations and emergencies when driving a train

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others
- completing relevant documentation and reports
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on workplace contexts, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- operating electronic communications equipment in accordance with workplace protocols
- reading and interpreting relevant instructions, procedures and information
- selecting and using relevant communications and other equipment
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- abnormal situations and emergencies that may occur when driving a train
- emergency procedures and emergency response plan
- focus of operation of work systems, equipment, management and site operating systems when responding to abnormal situations and emergencies when driving a train
- hazards that may occur that can lead to emergencies, and related hazard control strategies
- organisational procedures and policies for identifying and responding to abnormal

situations and emergencies when driving a train

- possible responses to identified abnormal situations and emergencies when driving a train
- problems that may occur when responding to abnormal situations and emergencies when driving a train and action that can be taken to resolve these problems
- relevant documentation and reporting requirements
- relevant environmental protection legislation, procedures and guidelines
- relevant state/territory legislated rail safety requirements, codes of practice and/or guidelines
- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, procedures and guidelines.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIF5017 Investigate rail safety incidents

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to investigate safety incidents in accordance with rail safety regulatory and workplace requirements as part of work activities in the transport and logistics industry.

It includes planning the investigation, collecting and analysing information, and preparing the safety incident report.

People achieving competence in this unit will need to comply with the relevant state/territory rail safety legislation, codes of practice, industry standard and/or guidelines.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Plan the

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Clarification of the incident investigation objectives is

- investigation** established in conjunction with relevant personnel, in accordance with workplace and regulatory requirements
- 1.2 Investigation timeframes and locations are established in conjunction with relevant personnel
- 1.3 Required investigation resources are identified and obtained within workplace guidelines
- 2 Collect and analyse information**
- 2.1 All relevant available incident information is obtained and collated to facilitate a detailed and accurate incident analysis
- 2.2 Interviews are conducted with relevant personnel to establish their recollection of events associated with the incident
- 2.3 Information is analysed in accordance with the established investigation objectives, based on approved conditions, applicable standards and operational guidelines
- 2.4 Options for action that lead to recommendations that reduce future risk are generated, in accordance with workplace and/or statutory requirements
- 2.5 Criteria are specified to enable objective evaluation of the options to be undertaken
- 3 Prepare report**
- 3.1 Conclusions are drawn and recommendations are made that will enable a satisfactory resolution of the incident issues, and meet workplace and statutory requirements
- 3.2 Opportunities to enhance operational efficiency and safety procedures are documented in accordance with standard reporting guidelines
- 3.3 Documentation is filed and distributed to all relevant parties for consideration and subsequent action

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIF5017A Investigate rail safety incidents.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIF5017 Investigate rail safety incidents

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist when investigating safety incidents
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing documentation related to investigating safety incidents
- conducting interviews and taking statements
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- negotiating and liaising effectively with others
- operating and adapting to differences in equipment in accordance with operating procedures
- preparing reports and recommendations
- reading and interpreting instructions, procedures and information relevant to investigating safety incidents
- working collaboratively with others when investigating safety incidents
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- data collection and analysis techniques required when investigating safety incidents
- documentation and reporting requirements for investigating safety incidents
- notifiable occurrences reporting requirements prescribed by regulations
- operational work systems, equipment, management and site operating systems for investigating safety incidents
- problems that may occur when investigating safety incidents and appropriate action that can be taken to resolve these problems
- relevant state/territory rail safety legislation, codes of practice, industry standards and/or guidelines
- workplace procedures and policies for the investigation of safety incidents.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, safety management system, regulations, codes of practice and operation manuals.

## TLIF5020 Manage emergencies

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to manage emergencies as part of work activities undertaken in the transport and logistics industry, in accordance with regulatory requirements, relevant codes of practice and workplace procedures.

It includes identifying and responding to emergency situations, taking required action during an emergency, arranging follow-on support and assistance, and communicating with staff.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

F – Safety Management

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify and respond to emergency

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Emergency and potential emergency situations are promptly identified and assessed, and needs are prioritised in accordance with workplace emergency response

<b>situations</b>	plan/procedures
	1.2 Emergency situations are handled appropriately
	1.3 Incident reports are completed accurately in accordance with regulatory and workplace procedures
<b>2 Take required action during an emergency</b>	2.1 Responsibilities are fulfilled in accordance with the workplace emergency response plan and code/regulatory requirements
	2.2 Assistance is provided to other staff in conducting an initial assessment of the emergency scene
	2.3 Assistance is provided in controlling the site prior to and following, the arrival of emergency services
	2.4 Directions of the controlling emergency authority are followed and all possible assistance is provided in response to those directions
<b>3 Arrange follow-on support and assistance</b>	3.1 Medical assistance and support is arranged as required in accordance with workplace procedures
	3.2 First aid is provided pending the arrival of medical assistance within limits of responsibility and competence in accordance with workplace procedures
<b>4 Communicate with staff</b>	4.1 Staff and customers are provided with relevant, appropriate and timely advice on emergency situations and instructions to be followed, on an ongoing basis
	4.2 Evacuation procedures for staff/customers are outlined in accordance with workplace procedures
	4.3 Customer service and safety needs arising from emergency situations are identified and acted upon in accordance with regulatory and workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF5020A Manage emergencies.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIF5020 Manage emergencies

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during emergency situations
- applying relevant legislation and workplace procedures
- communicating effectively with others when managing emergency situations
- completing documentation related to managing emergency situations
- conducting interviews and taking statements
- following emergency response plan and procedures
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- preparing reports and recommendations
- reading and interpreting instructions, procedures, information and signs relevant to managing emergency situations
- selecting and using relevant computer/communication/office equipment required for managing emergency situations
- working collaboratively with others when managing emergency situations
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian codes of practice, regulations and safeworking systems relevant to managing emergencies, including the Australian Dangerous Goods (ADG) Code
- data collection and analysis techniques required when managing emergency situations
- documentation and reporting requirements for managing emergency situations
- operational work systems, equipment, management and site operating systems for managing emergency situations
- hazards that may occur in transport and allied industries that can lead to emergency situations, and related hazard control strategies, including:
  - handling hot food and equipment
  - sudden and unexpected movement
  - infectious and contagious diseases
  - self-closing doors
  - sharp objects
  - syringes and drugs
  - contact with human and biological waste
  - fire and explosion
  - collision
  - derailment of trains
  - handling, storage and carriage of dangerous goods and other hazardous substances
  - handling, storage and carriage of explosives
- problems that may occur when managing emergencies and appropriate action that can be taken to resolve these problems
- relevant state/territory rail safety legislation, from each applicable state/territory together with any codes of practice, rail industry standards and/or guidelines
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- workplace procedures and policies for managing emergency situations, including the elements of an emergency response plan and first aid procedures where applicable.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIF5021 Apply rail safeworking rules and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to apply rail safeworking rules and procedures.

It includes establishing the purpose and function of safeworking systems, implementing the principles of rail safeworking systems and implementing the principles of track protection systems.

This unit covers applying rail safeworking systems, which are integrated systems of operating procedures and engineered systems used in the rail network for safe operation of rail traffic, and protection of people and property. It can be applied to freight, heavy haul or metropolitan and regional passenger rail systems.

In applying this unit, the following rail safety operating principles may be involved:

- ensuring emergencies and incidents are properly managed
- ensuring interfaces between different organisations are properly defined and managed
- identifying and managing risk
- protecting people from injury
- protecting property from damage
- track access
- train separation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Establish purpose and function of rail safeworking systems**

1.1 Relevant information is accessed and analysed

1.2 Purpose of rail safeworking rules and procedures are identified and explained

1.3 Methods for developing safeworking rules and procedures are identified and outlined

1.4 Types of safeworking systems, their functions and where they are used are explained

### **2 Implement principles of rail safeworking systems**

2.1 Relevant information is accessed and analysed

2.2 Principles behind rail safeworking systems are identified and explained

2.3 Main elements of rail safeworking systems are identified and explained

2.4 Methods by which operations can continue in degraded situations are identified and outlined

2.5 Appropriate procedures are prepared to enable operations to continue in various degraded situations

### **3 Implement principles of track protection systems**

3.1 Relevant information is accessed and analysed

3.2 Risks involved in working on or beside the track are identified, explained and managed

3.3 Purpose of track protection is identified and explained

3.4 Different methods of track protection are identified and outlined

3.5 Work is planned so that relevant track protection methods can be applied

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF5021A Apply rail safeworking rules and procedures.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF5021 Apply rail safeworking rules and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and using rail safety industry standards, rules, codes of practice and operational procedures
- applying relevant safeworking systems and workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- researching and reviewing relevant rail industry and rail safety regulation information.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- duty holders and their duties under rail safety and work health and safety (WHS)/occupational health and safety (OHS) legislation
- key concepts and definitions relating to rail safeworking
- key principles and practices associated with railway operations
- key regulatory requirements and rail industry standards for rail industry participants
- rail safety management systems (SMSs) and process
- rail safety operating principles
- rail safety regulatory framework
- relevant rail safety, WHS/OHS and environmental legislation related to safeworking and track protection.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in rail workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# **TLIF5022 Develop and manage fitness for work policy and procedures**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to develop and manage fitness for work policy and procedures in an organisation.

It includes identifying legal requirements, liabilities and responsibilities; establishing and/or improving implementation plans, related policy and procedures; and acting appropriately to reports on the implementation of fitness for work policy and any identified breaches of associated regulations. It also includes ensuring that the operation's systems are compliant with regulations and organisational policy; and establishing, implementing, monitoring and communicating fitness for work programs.

This unit applies to people with the responsibility for rail operations management.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

F – Safety Management

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Identify or confirm regulatory requirements and organisational responsibilities**

- 1.1 Current regulatory requirements, obligations and responsibilities for fitness for work within the organisation are identified and interpreted
- 1.2 National health assessment standards for rail safety workers and/or other applicable standards are accessed and interpreted
- 1.3 Current regulatory requirements, obligations and responsibilities regarding the use of drugs and alcohol by rail safety workers are identified and interpreted
- 1.4 Current regulatory requirements, obligations and responsibilities regarding fatigue management of rail safety workers are identified and interpreted
- 1.5 Risk-based approach is taken to developing programs that meet regulatory requirements

### **2 Establish and implement a fitness for work policy and procedures**

- 2.1 Organisational fitness for work implementation plan is developed and/or reviewed and implemented in conjunction with relevant personnel
- 2.2 Organisational fatigue management policy and procedures are developed and/or reviewed and implemented
- 2.3 Policy and procedures related to drug and alcohol testing are developed and/or reviewed and implemented
- 2.4 Fitness for work policy and procedures are aligned to organisational return-to-work policy and procedures
- 2.5 Risk management approach is taken to identifying medical requirements for categories of rail safety workers
- 2.6 Fitness for work risk management system implementation plan and related policy and procedures are distributed and presented to relevant organisational personnel for implementation

### **3 Monitor implementation of fitness for work policy and**

- 3.1 Reports from designated personnel on the implementation of the organisation's fitness for work risk management system implementation plan and

- procedures** related policies and procedures are received and interpreted
- 3.2 Reports on accidents and safety incidents are reviewed to identify the extent to which a breach of the fitness for work procedures might have been a contributing factor
- 3.3 Organisational activities are monitored and changes to organisation's fitness for work risk management system and procedures are identified, and appropriate action is taken to make the necessary adjustments
- 4 Act upon identified breaches of fitness for work policy**
- 4.1 Identified or reported breaches of fitness for work policy are investigated in accordance with organisational procedures and regulatory requirements
- 4.2 Action is taken to ensure internal and/or external personnel who may have contributed to any breach of fitness for work policy are provided with appropriate feedback and information to avoid any recurrence of the breakdown in planned processes
- 4.3 Where organisational procedures or culture are found to have contributed to a breach in fitness for work policy, appropriate action is taken to improve procedures or to address the culture in ways that aim to avoid any recurrence of the breakdown
- 4.4 Reports on breaches of fitness for work policy are prepared and submitted to designated personnel in accordance with organisational procedures and/or regulatory requirements
- 5 Ensure operations systems are compliant with fitness for work policy and regulations**
- 5.1 All operations systems and standard operating procedures are reviewed in terms of their compliance with the organisation's fitness for work policy and regulations
- 5.2 Changes are made to operations systems and standard operating procedures to ensure they are compliant as required
- 5.3 Supplier and/or subcontractor operations systems and standard operating procedures are reviewed to ensure they are compliant with fitness for work policy and regulations, in accordance with legislated requirements
- 6 Identify required resources**
- 6.1 Resources to support the implementation of the organisation's fitness for work risk management system

- and operational systems** are identified and submitted to appropriate authority
- 6.2 Organisation's fitness for work risk management systems resources are periodically reviewed and appropriate changes are made or requested
- 7 Communicate fitness for work policy and procedures**
- 7.1 Appropriate personnel affected by organisational fitness for work policy and procedures are identified
- 7.2 Organisational fitness for work policy and procedures are communicated to appropriate personnel using effective strategies
- 7.3 Team leaders, supervisory and training staff are provided with adequate resources to deliver organisational fitness for work communications strategies

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF5022A Develop and manage fitness for work policy and procedures.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF5022 Develop and manage fitness for work policy and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in legislation and regulations as they relate to fitness for work
- communicating effectively with others when implementing the organisation's fitness for work management system
- developing a fitness for work system for an organisation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying fitness for work requirements within an organisation
- organising audits and reviews of an organisation's fitness for work management system
- reading and interpreting documentation on fitness for work management legislation
- recognising breaches of fitness for work management strategies and regulations, and taking appropriate action in accordance with the organisation's fitness for work management system
- reviewing current fitness for work procedures
- working collaboratively with rail safety workers and management to implement the organisation's fitness for work management system.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- components of a fitness for work risk management system
- procedures for auditing and reviewing an organisation's fitness for work management system, and related policy and procedures, and for reporting audit outcomes
- relevant sections of applicable state/territory legislated rail safety requirements and regulations related to:  
fatigue management, drug and alcohol use, and medical requirements in the rail industry work health and safety (WHS)/occupational health and safety (OHS)
- relevant documentation to develop and manage fitness for work policy and procedures
- responsibilities of an organisation and individual employees for implementing fitness for work policy and regulations
- risk-based approaches to developing fitness for work programs
- strategies for ensuring that the investigation and analysis of errors, safety incidents and accidents identify the extent to which fitness for work is a contributing factor
- systems for auditing the effectiveness of an organisation's fitness for work management strategies, policies and procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in rail workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIF5023 Undertake a derailment investigation

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to undertake a derailment investigation in accordance with legislative and regulatory requirements.

It includes preparing for a derailment investigation, determining potential contributory factors, planning for derailment investigation report requirements, and investigating a derailment.

This unit applies to people with the responsibility for rail operations management.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Prepare for derailment

1.1 Derailment investigation definitions are identified

- investigation** and explained
- 1.2 Principles of systematic investigation to be employed in derailment investigation are identified and followed
  - 1.3 Purpose and objectives of derailment investigation are identified and documented in accordance with organisational and regulatory requirements
  - 1.4 Types of data to be collected to conduct derailment investigation are identified and documented
  - 1.5 Types of evidence to be collected during derailment investigation are identified and documented
- 2 Determine potential contributory components of the rail system to the derailment**
- 2.1 Track structure and track components that may have contributed to derailment are identified in accordance with organisational and regulatory requirements
  - 2.2 Rolling stock involved in derailment is identified in accordance with organisational and regulatory requirements
  - 2.3 Normal operation of rolling stock at derailment site is outlined in accordance with organisational and regulatory requirements
  - 2.4 Safeworking systems in operation at derailment site are explained
- 3 Plan for derailment investigation report requirements**
- 3.1 Methods by which evidence will be gathered are outlined
  - 3.2 Appropriate report structure is determined
  - 3.3 Timelines for conducting investigation and producing report are established
  - 3.4 Equipment required to conduct derailment investigation is identified and accessed
- 4 Investigate derailment**
- 4.1 Resources required to undertaken rail derailment investigation are acquired
  - 4.2 Hazards are identified, risks are assessed and control measures are implemented
  - 4.3 Evidence is gathered in accordance with identified

methods and required timelines

- 4.4 Rail derailment investigation report is drafted, reviewed and finalised in accordance with organisational and regulatory requirements
- 4.5 Rail derailment investigation report is completed and submitted in accordance with organisational and regulatory requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF5023A Undertake a derailment investigation.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIF5023 Undertake a derailment investigation

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- planning a derailment investigation in accordance with organisational and regulatory requirements
- producing a derailment investigation report
- reading and interpreting documentation and the organisation's rail safety compliance system, and applying these to a derailment investigation
- recognising non-conformance with rail safety requirements and taking appropriate action in accordance with organisational policies and procedures
- recording and preserving evidence when undertaking a derailment investigation in accordance with workplace procedures
- working collaboratively with employees and other management staff when undertaking a derailment investigation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- evidence collection and analysis techniques
- evidence preservation techniques
- notifiable occurrence reporting requirements in accordance with operational procedures
- rail safeworking systems
- relevant investigating and reporting legislation and regulations
- rolling stock operations including traction systems, braking systems, inspection regimes

- signalling systems
- terminology as defined by the applicable Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice
- track components and dynamics
- wheel-track interface management.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in rail workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIF5024 Develop plans for emergency response and recovery of rail networks

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to develop emergency management plans for response and recovery of rail networks.

It includes identifying factors that contribute to degraded rail operations, and developing, implementing, monitoring and evaluating emergency response and recovery strategies, in accordance with regulatory and organisational requirements.

This unit can be applied to freight, heavy haul or metropolitan and regional passenger rail systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

F – Safety Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Identify factors that contribute to degraded rail operations**

- 1.1 Types of rolling stock and typical failures are identified
- 1.2 Track and trackside equipment failures are identified and explained
- 1.3 Operational factors that contribute to degraded rail operations are identified
- 1.4 Control or safety critical system failures that contribute to degraded rail operations are identified
- 1.5 External occurrences that contribute to degraded rail operations are identified
- 1.6 Power supply systems and problems that contribute to degraded rail operations are identified

**2 Develop emergency response and recovery strategies**

- 2.1 Risk assessments are included in developing emergency response and recovery strategies
- 2.2 Policy and procedures are developed to implement emergency response and recovery strategies in accordance with organisational and regulatory requirements
- 2.3 Emergency response and recovery strategies are planned with internal and external stakeholders to ensure compliance with organisational and regulatory standards and requirements
- 2.4 Emergency response and recovery plans are disseminated to appropriate managers and to regulators as required, for approval
- 2.5 Emergency response and recovery plans are amended in response to comments received from managers and regulators, as required
- 2.6 Emergency response and recovery procedures are documented and communicated to appropriate personnel in accordance with organisational requirements

**3 Implement emergency response and recovery strategies**

- 3.1 Emergency response and recovery strategies are implemented in accordance with organisational and regulatory requirements
- 3.2 Effective induction and supervision are provided to support individuals in meeting their organisational and regulatory responsibilities

#### **4 Monitor, adjust and report emergency response and recovery strategies**

- 4.1 Emergency response and recovery strategies are monitored and deficiencies are identified
- 4.2 Identified deficiencies are assessed against organisational standards and prioritised for action
- 4.3 Recommendations for improvements to meet organisational and regulatory standards are developed and submitted to designated persons/groups
- 4.4 Agreed improvements and alterations to emergency response and recovery strategies, policies and procedures are implemented in accordance with organisational and regulatory requirements
- 4.5 Individuals/groups are informed of improvements and alterations to emergency response and recovery strategies
- 4.6 Systems, records and reporting procedures are maintained in accordance with organisational and regulatory requirements

#### **5 Evaluate emergency response and recovery strategies**

- 5.1 Effectiveness of emergency response and recovery strategies and related policies, procedures and programs is assessed in accordance with organisational and regulatory requirements
- 5.2 Improvements are identified, developed and implemented to ensure more effective achievement of emergency response and recovery strategies

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIF5024A Develop plans for emergency response and recovery of rail networks.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIF5024 Develop plans for emergency response and recovery of rail networks

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and using rail industry standards, rules, codes of practice and guidelines
- applying relevant legislation and workplace procedures when developing plans for emergency response and recovery
- communicating effectively with others, particularly in relation to emergency response procedures and recovery planning
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying appropriate emergency response procedures for rail operational
- producing well researched, documented and supported emergency response and recovery policies, procedures and plans
- researching relevant rail network, emergency response procedures and recovery planning information
- reviewing changing regulatory information
- reviewing current emergency response procedures and making recommendations for improvement.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- changes in rail industry operations and technology with implications for degraded operations
- emergency management plan and workplace procedures
- key principles and practices associated with railway operations
- rail industry
- rail industry terminology, including terminology used in rail industry standards
- relevant rail safety, emergency management plan, work health and safety (WHS)/occupational health and safety (OHS) and environmental legislation related to rail operations
- safety management system.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in rail workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, rail industry standards, regulations, codes of practice, safety management system and operation manuals.

# TLIG1001 Work effectively with others

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the basic skills and knowledge required to work effectively with others using established procedures and appropriate interpersonal skills to assist others to complete work tasks, in accordance with workplace procedures and relevant regulatory requirements.

It includes contributing to determining appropriate work roles, planning activities and working with others to complete activities.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

G – Teamwork

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

**1 Contribute to determining appropriate work roles**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work roles of each team member are identified, based on information and instructions about objectives, performance requirements and procedures

- 1.2 Contributions are made to determining appropriate roles and responsibilities for the successful completion of the activity
- 2 Contribute to planning the activity**
- 2.1 Suggestions and information are provided as appropriate to contribute to planning the activity in accordance with the associated procedures
  - 2.2 Support needed to complete activities is identified
- 3 Work with others**
- 3.1 Forms of communication appropriate to the activity are used
  - 3.2 Assistance to complete the activities is requested as required
  - 3.3 Contributions to the achievement of a required outcome are made
  - 3.4 Work is undertaken in accordance with specified procedures on an individual and shared basis as required
  - 3.5 Problems are discussed and resolved where possible, through agreed and accepted processes
  - 3.6 Suggestions for improvements to processes are made and discussed within the team

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIG1001A Work effectively with others.

## Links

# Assessment Requirements for TLIG1001 Work effectively with others

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others when completing work activities
- interpreting and following operational instructions and prioritising work within the team
- modifying team activities depending on operational contingencies, risk situations and environments
- monitoring team activities in terms of planned schedule
- reading and interpreting instructions, procedures, information and signs relevant to working with others as a team
- reporting and/or rectifying identified misunderstandings and problems promptly using appropriate strategies, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic principles of teamwork
- focus of operation of work systems, equipment or management, site and organisational operating procedures
- relevant workplace standards and procedures, and duty of care requirements
- typical misunderstandings and problems that can occur in the workplace and appropriate ways of dealing with them
- workplace structures and the roles and responsibilities of team members.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

## TLIG2007 Work in a socially diverse environment

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to apply cultural awareness, communication principles and problem-solving techniques to facilitate working in a socially diverse environment. This is done in accordance with workplace procedures, relevant anti-discrimination and equal employment opportunity regulations.

It includes communicating with customers and colleagues from diverse backgrounds and dealing with cross-cultural misunderstandings.

Work is performed with limited or minimum supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

G – Teamwork

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Communicate with customers

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1.1 Customers and colleagues from all cultural groups

**and colleagues from diverse backgrounds**

are valued and treated with respect and sensitivity

- 1.2 Cultural differences are accommodated in verbal and non-verbal communication
- 1.3 Where language barriers exist, efforts are made to communicate through use of gestures or simple words in the other person's language
- 1.4 Assistance from colleagues, reference books or outside organisations is obtained as required

**2 Deal with cross-cultural misunderstandings**

- 2.1 Issues that may cause conflict or misunderstanding in the workplace are identified
- 2.2 Difficulties are addressed with the appropriate people and assistance is sought from team leader/supervisor as required
- 2.3 When difficulties or misunderstandings occur, possible cultural differences are considered
- 2.4 Efforts are made to resolve misunderstandings, taking account of cultural considerations
- 2.5 Issues and problems are referred to the appropriate team leader/supervisor for follow-up

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

**Unit Mapping Information**

This unit replaces and is equivalent to TLIG2007A Work in a socially diverse environment.

# Assessment Requirements for TLIG2007 Work in a socially diverse environment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- communicating and working effectively with others when working in a socially diverse environment
- completing documentation related to working in a socially diverse environment
- reading, interpreting and applying instructions, legislation, procedures, information and signs relevant to working in a socially diverse environment
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic awareness of the culture of Australia's indigenous and non-indigenous peoples
- cultural awareness
- principles of equal employment opportunity (EEO) and anti-discrimination legislation as they apply to individual employees
- principles that underpin cultural awareness
- recognition of the different cultural groups in Australian society
- recognition of various international customer groups (appropriate to the sector and individual workplace)
- typical cross-cultural misunderstandings and problems that can occur in the workplace, and appropriate ways of dealing with them.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

## TLIG3002 Lead a work team or group

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to lead a work team or group in accordance with workplace procedures and relevant regulations.

It includes participating in work team/group planning, managing and developing work team/group performance, participating in and facilitating a work team/group achieve workplace tasks, as well as documenting and reviewing work team/group performance.

Work is performed under some supervision, generally within a team environment.

Work involves the application of established procedures when leading a work team or group.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

G – Teamwork

### Unit Sector

Not applicable.

### Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Participate in work team/group planning**
  - 1.1 Requirements of a team/group task are identified and clarified in conjunction with team/group members to ensure appropriate interpretation of specifications and in accordance with enterprise requirements
  - 1.2 Hazards are identified, risks are assessed and control measures are implemented
  - 1.3 Task is interpreted and relevant steps are identified in conjunction with team/group members to ensure efficient conduct of work to meet specifications and enterprise requirements
  - 1.4 Steps are planned in conjunction with other personnel to allow achievement of practical outcomes in accordance with enterprise and/or manufacturer procedures
- 2 Manage and develop work team/group performance**
  - 2.1 Task activities are assigned to team/group members based on competence, expertise and availability
  - 2.2 Team/group members are advised about symptoms and effects of fatigue, drugs and alcohol, safe lifting techniques and other work health and safety (WHS)/occupational health and safety (OHS) policies
  - 2.3 Performance measures and requirements are agreed with team/group members in accordance with enterprise procedures
- 3 Participate in and facilitate work team/group achieve tasks**
  - 3.1 Work activity is organised and carried out with team/group members and other personnel using relevant communication processes to ensure safe, unambiguous and appropriate sequencing of tasks
  - 3.2 Individuals and teams/groups are actively encouraged to take individual and joint responsibility
- 4 Document and review work team/group tasks**
  - 4.1 Necessary documentation related to job planning and progress is completed and recorded in accordance with statutory, manufacturer and enterprise requirements
  - 4.2 Outcomes of team/group task activities are compared with planned objectives, task instructions and specifications to ensure all requirements have been met

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIG3002A Lead a work team or group.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIG3002 Lead a work team or group

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and recommending improvements to services, resource allocation and use
- leading and encouraging team members
- modifying team activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising team activities in terms of planned schedule
- negotiating and working effectively with team members
- operating electronic communications equipment to required protocol
- planning team activities, including predicting consequences and identifying improvements
- reading, interpreting and following relevant instructions, procedures
- selecting and appropriately applying technology, information systems and procedures to complete workplace tasks.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- coaching and mentoring approaches
- principles, duty of care and obligations within the chain of responsibility in the transport industry
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection policies and procedures
- relevant regulatory and codes of practice requirements
- strategies to implement continuous improvement processes
- techniques to encourage appropriate participation of team/group members
- typical problems that can occur when leading a work team and related appropriate action that can be taken
- workplace policies and plans including procedures for training and development
- workplace protocols and procedures for leading work teams.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## **TLIG3003 Apply positive behaviours in the workplace**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to apply standards of conduct and positive behaviours in the workplace.

This unit applies to team members who are making the transition to a leading role that can influence the performance of others.

Such people have a strong influence on the work culture, values and ethics of the people with whom they work.

It includes modelling good practice, professionalism and confidently representing the organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

G – Teamwork

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

Elements describe the                      Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

**1 Model high standards of performance and behaviour**

- 1.1 Positive performance and behaviours that meet organisational standards are identified, confirmed and employed
- 1.2 Performance and behaviour that serve as a positive role model for others are displayed
- 1.3 Work/performance plans are implemented in accordance with organisational goals and objectives

**2 Enhance organisational image**

- 2.1 Organisational standards and values are followed
- 2.2 Standards and values considered to be damaging to the organisation are questioned through established communications channels
- 2.3 Personal performance is monitored to ensure integrity and credibility are displayed in interactions with others

**3 Contribute to organisational decisions**

- 3.1 Information relevant to issue/s under consideration is provided when requested
- 3.2 Active participation in decision-making processes is demonstrated
- 3.3 Options are examined, associated risks are assessed and preferred course/s of action are recommended based on experience and knowledge
- 3.4 Agreed decisions are implemented in cooperation with relevant individuals and teams
- 3.5 Organisational feedback processes are used to inform the organisation of the impact of agreed decisions

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIG3003A Apply positive behaviours in the workplace.

## TLIG4006 Facilitate work teams

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to lead and facilitate work teams. Work involves facilitating and encouraging the work of work teams/groups, and providing leadership to others in establishing and achieving team objectives.

It includes participating and providing leadership in team planning, developing team commitment and cooperation, and managing and developing team performance.

Work is performed under minimum supervision with general guidance on progress and outcomes. It involves discretion and judgement for self and others in facilitating work teams or groups.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

G – Teamwork

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Participate in team

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Clearly defined team goals, purpose, roles, responsibilities and accountabilities are established in consultation with team, in

- planning** accordance with organisational goals and objectives
- 1.2 Team performance plan is developed in consultation with team, in accordance with organisational business plan, policies and practices
  - 1.3 Processes to monitor and adjust team performance are developed and agreed to in consultation with team, in accordance with continuous improvement policies
  - 1.4 Benefits of team diversity membership are articulated by team and included in team plans
- 2 Develop team commitment and cooperation**
- 2.1 Open communication processes are used by team to obtain and share information
  - 2.2 Team is encouraged to show and exploit innovation and initiative
  - 2.3 Support is provided to team to develop mutual concern and camaraderie
- 3 Manage and develop team performance**
- 3.1 Team is supported in making decisions within agreed roles and responsibilities
  - 3.2 Results achieved by team contribute positively to the organisation business plans
  - 3.3 Team and individual competencies are monitored regularly to confirm that team is able to achieve goals
  - 3.4 Mentoring and coaching opportunities are provided to team members to enhance personal and collective knowledge and skills
  - 3.5 Delegates performance is monitored to confirm they have completed the relevant delegation/assignment
- 4 Encourage and facilitate the work of teams**
- 4.1 Team effectiveness is encouraged and enhanced through active participation in team activities and communication processes
  - 4.2 Individuals and teams are actively encouraged to take individual and joint responsibility for actions
  - 4.3 Team is supported to identify and resolve problems that impede performance

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIG4006A Facilitate work teams.

## TLIH2003 Prioritise courier/delivery operations

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to prioritise courier or delivery operations in compliance with relevant regulations, as part of work undertaken within the transport and logistics industry.

It includes identifying, planning and preparing work requirements; undertaking work; adjusting to changing priorities; and completing work activities to operational requirements.

Work is generally performed under indirect supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

H – Route Planning and Navigation

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify work requirements

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work requirements and specific customer requirements interpreted and clarified as required

1.2 Pick-up and delivery points are located

- 1.3 Size, weight and configuration of materials to be couriered are identified
- 1.4 Equipment required to facilitate pick-up and delivery is identified
- 2 Plan and prepare for work**
  - 2.1 Work is planned based on an analysis of distance, travel times, customer requirements, resource implications and known priorities
  - 2.2 Planned steps and outcomes are checked to ensure conformity with instructions and work requirements
  - 2.3 Work sequence is identified and relayed to base as required
  - 2.4 Required resources are selected
- 3 Undertake work operations**
  - 3.1 Work operations are undertaken in accordance with plan and quality requirements, and within operator and equipment operating capacity
  - 3.2 Difficulties or uncertainties occurring during operations are identified and alternative strategies are determined
  - 3.3 Pick-up and delivery of materials is undertaken in accordance with workplace quality procedures
- 4 Adjust to changing work priorities**
  - 4.1 Work plan or route is adjusted or modified to meet changing priorities and circumstances
  - 4.2 Changes to work plan are relayed to base
- 5 Complete work operations**
  - 5.1 Work operations are reviewed to ensure outcomes have met customer requirements and workplace quality outcomes
  - 5.2 Workplace documentation is completed
  - 5.3 Operational capacity of equipment is checked and returned to storage area as required
  - 5.4 Security of goods is maintained in accordance with enterprise procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIH2003A Prioritise courier/delivery operations.

## **TLII2015 Operate the on-train buffet car**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to operate the on-train buffet car in accordance with regulatory and workplace requirements.

It includes preparing and providing takeaway food and beverages, maintaining and controlling stock, serving customers, and carrying out required financial control procedures.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment.

Work involves the application of regulatory requirements and workplace procedures when operating an on-train buffet car, as part of workplace activities in the rail transport and allied industries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

I – Customer Service

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Prepare and provide takeaway food and beverages**

1.1 Food and beverage items are prepared and presented to passengers in a form consistent with workplace procedures and manufacturer instructions

1.2 Hazards are identified, risks are assessed and control measures are implemented

1.3 Stock is checked for spoilage and expiry dates on a regular basis in accordance with workplace procedures

1.4 Out-of-date stock is disposed of in accordance with workplace procedures

### **2 Maintain and control stock**

2.1 All stock is stored in accordance with workplace procedures and relevant health regulations

2.2 Stock is rotated on a regular basis in accordance with workplace procedures, and food regulations and guidelines

2.3 Food that does not meet health requirements is disposed of in accordance with workplace procedures and regulatory requirements

### **3 Serve customers**

3.1 Customer requirements are ascertained using appropriate inquiries in a courteous manner

3.2 Correct product and pricing information is clearly displayed

3.3 Specials are promoted and sales opportunities are identified and optimised

### **4 Complete financial control procedures**

4.1 Financial transactions are accurately carried out in accordance with regulatory requirements and workplace procedures

4.2 Financial reconciliation is carried out as required

4.3 Cash is securely handled and stored in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLII2020 Provide assistance to customers with specific needs

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- applying relevant workplace procedures
- communicating effectively with others when transporting customers with specific needs
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying delays that may occur when assisting customers with specific needs and the correct procedures for dealing with them
- identifying different categories of specific need
- interacting positively with customers with specific needs
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, in accordance with regulatory requirements and workplace procedures
- using ancillary equipment to assist customers with specific needs in accordance with workplace procedures
- working collaboratively with others when transporting customers with specific needs.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- ancillary equipment operating procedures

- manufacturer instructions, specifications and recommended operating procedures for ancillary equipment, including pre-operational checks
- organisational policies and procedures
- regulations and codes of practice
- service timetables and network information
- workplace instructions and procedures for transporting customers with specific needs.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## **TLI3009 Provide on-board services to customers**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to provide on-board services to customers on transport vehicles/vessels.

It includes establishing effective communication with customers, identifying and assessing the needs and expectations of different customers, and providing for identified customer requirements in accordance with organisational procedures.

Work is performed individually, and guidance or advice is available where necessary.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

I – Customer Service

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Establish effective communication with customers**
  - 1.1 All customers are greeted in a polite and friendly manner, and formal and informal communication styles are applied as appropriate
  - 1.2 All communications with customers are conducted in a manner which is consistent with organisational policy
- 2 Identify and assess the needs and expectations of different customers**
  - 2.1 Individual customer needs and expectations are identified so appropriate products and services may be provided
  - 2.2 Customers with specific needs are identified and appropriate attention is given to ensure requirements are satisfied
  - 2.3 Hazards are identified, risks are assessed and control measures are implemented
  - 2.4 Limitations to service provision are identified and communicated to customers and customer understanding is confirmed
- 3 Provide identified customer requirement**
  - 3.1 Needs and reasonable requests of customers are met in a consistent and timely manner
  - 3.2 Customer dissatisfaction is promptly recognised and appropriate steps are taken to restore goodwill
  - 3.3 Anticipated problems are correctly identified and monitored and action is taken to minimise their effects on customer satisfaction
  - 3.4 Opportunities to enhance service quality are taken when appropriate
  - 3.5 Information about anticipated and unanticipated problems and delays is promptly communicated to customers

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLII3009A Provide on-board services to customers.

## Links

Companion Volume implementation guides are found in VETNet -

## Assessment Requirements for TLII3009 Provide on-board services to customers

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- completing transactions and revenue protection activities
- handling and resolving conflict and grievance situations
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

### Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- concessional privileges
- customer service requirements
- details of on-board services provided to customers
- fare structures
- organisational policies and procedures
- organisation's transport services
- procedures for using communications equipment
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- relevant state/territory regulations and requirements pertaining to revenue protection
- services for customers who have a disability
- timetables
- typical problems that can occur when providing on-board services to customers and related appropriate action that can be taken to prevent or solve these problems.
- 

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# Assessment Requirements for TLII5018 Manage customer service

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and consulting with others to ensure excellent customer service is modelled to staff and that customer issues are resolved
- dealing effectively with unplanned events such as a change in the volume of customer inquiries
- developing, implementing and revising contingency plans
- interpreting and following operational instructions and prioritising work
- monitoring work activities in terms of planned schedule, particularly in line with agreed time and quality standards
- preparing reports to develop and disseminate information on customer service performance.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- organisational performance management systems
- organisational policies, principles, codes and performance standards
- quality management systems
- relevant sections of national and state/territory regulatory requirements and codes of practice such as consumer protection legislation
- requirements for completing relevant documentation such as reports of customer complaints and resolutions
- risk management as it relates to dealing with customers and managing consequences of poor customer service
- steps involved in planning work activities.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## TLIJ2001 Apply quality procedures

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to apply quality procedures within work activities and established routine procedures in accordance with relevant regulations and workplace quality standards, to ensure the quality of products and services within the transport and logistics industry.

It includes applying quality concepts, planning and trialling improvements in work processes, and implementing improvements confirmed through the trials.

Work is performed under limited or minimum supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

J – Quality

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Apply quality concepts

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Responsibility is taken for quality of own work when providing services or products to meet external and internal

- customer needs
- 1.2 Work is completed in accordance with workplace standards as defined in enterprise policies and procedures
  - 1.3 Basic quality concepts are applied to work activities
- 2 Trial improvements**
- 2.1 Improvements to work processes are planned and trialed
  - 2.2 Trials of improvements to work processes are checked for expected outcomes and compliance with workplace requirements
- 3 Implement improvements**
- 3.1 Improvement initiatives trialed and confirmed as successful are implemented in accordance with enterprise procedures
  - 3.2 Work is completed in accordance with workplace policies and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIJ2001A Apply quality procedures.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIJ2001 Apply quality procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others when applying quality procedures and standards
- identifying and using equipment, processes and procedures required within the context of the job
- modifying quality assurance activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of quality procedures and standards, and taking appropriate action as required
- reading, interpreting and following instructions and information relevant to quality procedures and standards
- reporting and/or rectifying identified quality-related problems promptly, in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- focus of operation of work systems, equipment or management, site and organisational operating procedures
- housekeeping standards and procedures
- impact of job on enterprise and individual performance
- relevant work health and safety (WHS)/occupational health and safety (OHS) procedures and guidelines
- typical quality-related problems that may arise in work operations and products, and

related options for action and solutions

- workplace or site layout
- workplace quality assurance and improvement principles and procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIJ3002 Apply quality systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to apply quality systems in workplace operations in accordance with relevant regulations and workplace quality standards within the transport and logistics industry.

It includes working within a quality improvement system and using quality improvement systems, tools and techniques in accordance with enterprise procedures.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

J – Quality

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Work within a quality improvement system

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Instructions are followed and duties are performed either individually or as a member of a work team within a quality improvement system

- 1.2 Work is completed either individually or as a member of a work team in accordance with standards as defined in workplace policies and procedures
- 2 Use quality improvement systems, tools and techniques**
- 2.1 Variations from required standards in the quality of services and/or products are detected and reported in accordance with workplace procedures
  - 2.2 Quality of operations/service is monitored and adjusted as required to ensure internal and external customer satisfaction
  - 2.3 Quality improvement tools and techniques are used individually and as part of a work team to systematically improve the quality of work, services and/or products

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIJ3002A Apply quality systems.

## Links

# Assessment Requirements for TLIJ3002 Apply quality systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others when applying and implementing quality systems
- completing relevant documentation
- identifying and using equipment, processes and procedures required within the context of the job concerned
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in relation to quality system standards and processes
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying identified problems, in accordance with regulatory requirements and workplace procedures
- selecting and using quality improvement tools and methods
- working collaboratively with others when applying and implementing quality systems
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- operational work systems, equipment or management, site and organisational operating procedures
- housekeeping standards and procedures
- impact of job on enterprise and individual performance
- quality improvement tools and methods
- typical quality-related problems that may arise in work operations and products, and related options for action and solutions
- workplace or site layout
- workplace quality assurance and improvement principles and procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIJ4009 Implement and monitor quality assurance systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to implement and monitor quality assurance systems.

It includes planning for quality assurance activities, and carrying out and evaluating quality assurance procedures.

This unit applies to ensuring the quality of materials, resources and outputs, including final products, meet organisational specifications and standards.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

J – Quality

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Plan for quality assurance activities**
  - 1.1 Products and services to be quality assured and required resources, are identified
  - 1.2 Objectives of the quality assurance activities are determined and discussed with those responsible for carrying them out
  - 1.3 Proposed methods and techniques to be applied are confirmed and implemented
- 2 Implement quality assurance procedures**
  - 2.1 Resources required to carry out the quality assurance plan efficiently and effectively are accessed
  - 2.2 Quality assurance activities are supported as required
  - 2.3 Quality of operations, services or products is monitored and adjusted as required to meet organisational specifications and standards
  - 2.4 Variations in the quality of operations, services or products from required standards are detected and reported in accordance with organisational procedures
  - 2.5 Problems that affect or could potentially affect quality are identified and solutions are posed and reported to relevant person
  - 2.6 Records are kept according to organisational quality assurance policy and procedures
- 3 Evaluate quality assurance procedures**
  - 3.1 Outcomes of implementing quality assurance procedures are evaluated against organisational specifications and standards
  - 3.2 Suggestions for improving quality assurance procedures are made in accordance with organisational policy and procedures
  - 3.3 Outcomes of the quality assurance activities are discussed with relevant parties and recommendations are made to ensure quality is maintained

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIJ4009A Implement and monitor quality assurance systems.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIJ4009 Implement and monitor quality assurance systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing and evaluating quality assurance processes, procedures and outcomes
- completing relevant documentation
- modifying activities depending on operational contingencies, risk situations and environments without compromising quality
- producing a quality assurance plan
- supporting others to maintain quality standards.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- data analysis and evaluation methods
- organisational quality assurance system
- organisational services, products and resource requirements
- relevant organisational specifications and standards that require quality assured outcomes
- requirements for completing relevant documentation, such as checklists, schedules and internal audit reports
- typical defects that can occur and related action that can be taken
- various approaches to quality assurance and their strengths and limitations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## TLIK2003 Apply keyboard skills

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to enter data into an infotechnology device using a keyboard. Work involves applying routine procedures when using computers for information management within the transport and logistics industry.

It includes applying work health and safety (WHS)/occupational health and safety (OHS) principles to keyboard operations and accurately entering data.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

K – Technology

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Apply WHS/OHS principles

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Information on WHS/OHS requirements when using keyboard/keypad devices is accessed and interpreted

- 1.2 Posture and ergonomic settings of chair and workstation are adjusted following WHS/OHS guidelines
  - 1.3 WHS/OHS guidelines on rest periods and exercise are followed when using computer keyboards, calculators or other data entry devices
- 2 Enter data**
- 2.1 Text and numeric data are entered into a computer, calculator or other data entry device using a keyboard or keypad as part of workplace tasks
  - 2.2 Entered information is checked and corrected using a keyboard or keypad

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIK2003A Apply keyboard skills.

## Links

# Assessment Requirements for TLIK2003 Apply keyboard skills

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying fatigue management knowledge and techniques
- applying precautions and required action to minimise, control or eliminate hazards that exist when using keyboards to enter data
- applying relevant legislation and workplace procedures
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in keyboards, software and computer equipment in accordance with standard operating procedures
- operating electronic infotechnology and computer equipment to required protocol
- reading and interpreting instructions, procedures, information and manuals relevant to using keyboards to enter data
- working systematically with required attention to detail without injury to self.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- procedures for the use of keyboards and computer equipment in the workplace
- relevant WHS/OHS procedures and guidelines concerning the use of computer equipment in the workplace, including recommended posture, ergonomic settings of chair and work station, and the use of rest periods and exercise
- typical problems that can occur when using keyboards to enter data and related appropriate action that can be taken to prevent or solve these problems
- work health and safety(WHS)/occupational health and safety (OHS) hazards and risks when using computer equipment for work tasks, and ways of controlling the risks

involved.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIK2007 Perform electronic data interchange to transmit shipping documentation

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to perform electronic data interchange (EDI) to transmit shipping documentation in accordance with relevant regulations and workplace procedures.

It includes identifying and establishing document purpose and information sources, compiling data files as well as transmitting and receiving documentation.

Work is performed under general supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

K – Technology

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify and establish document purpose and

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1.1 Purpose of task is identified and appropriate document template/s is accessed

### **information sources**

- 1.2 Manual and computerised sources of data are accessed in accordance with task requirements
- 1.3 Existing files and data to be updated are identified
- 1.4 Stored data regarding applicable regulations, client instructions, protocols and procedures are selected and combined correctly for the task

### **2 Compile data files**

- 2.1 Files are created/updated according to required format and layout
- 2.2 Data is accurately entered consistent with required purpose and in accordance with regulatory and workplace requirements
- 2.3 All relevant documentation sections are checked for accuracy and completeness
- 2.4 Discrepancies in documentation are identified and appropriate action is undertaken in accordance with workplace procedures
- 2.5 Files created or updated are saved and stored in accordance with workplace and regulatory requirements

### **3 Transmit documentation**

- 3.1 Document destination/s are correctly identified and selected
- 3.2 Destinations are checked for readiness to receive transmission
- 3.3 Security arrangements for data exchange are undertaken in accordance with workplace procedures
- 3.4 Documents are transmitted, componentry is used in accordance with workplace procedures and all information is correctly downloaded
- 3.5 Action is undertaken within scope of authority to rectify transmission faults
- 3.6 Print out of documents is made and filed/stored/forwarded in accordance with workplace procedures

### **4 Receive documentation**

- 4.1 Infotechnology devices are checked for readiness to receive downloaded documentation

- 4.2 Received documentation is printed and/or checked for accuracy and legibility
- 4.3 Action is undertaken within scope of authority to rectify transmission faults
- 4.4 Print-out of documents is made and filed/stored/forwarded in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIK2007A Perform electronic data interchange (EDI) to transmit shipping documentation.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIK2007 Perform electronic data interchange to transmit shipping documentation

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in electronic data interchange (EDI) equipment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when performing EDI to transmit shipping documentation
- completing documentation related to work activities
- identifying and using computer equipment, software, processes and procedures relevant to the job context
- maintaining eye-hand coordination
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- reading, interpreting and following instructions, procedures, information and manuals relevant to the use of EDI to transmit shipping documentation
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- using EDI to transmit shipping documentation to required protocol
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- equipment applications, capacities, configurations, safety hazards and control mechanisms
- housekeeping standards and procedures
- relevant agreements, codes of practice or other legislative requirements including local and international freight regulations
- typical problems that can occur when performing EDI to transmit shipping documentation and related action that can be taken to prevent or solve these problems
- workplace or site layout
- workplace procedures for the transfer and storage of electronic data and the use of related computer equipment and application software.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

## TLIK2010 Use infotechnology devices in the workplace

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to use infotechnology devices in the workplace in accordance with the relevant work health and safety (WHS)/occupational health and safety (OHS) regulations and workplace procedures, within the transport and logistics industry.

It includes identifying infotechnology equipment and systems; setting up, using and shutting down computer based equipment and systems; and inputting, storing and presenting files/data. It also involves implementing workplace procedures for managing and securing data.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

K – Technology

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Identify infotechnology systems** 1.1 Types of infotechnology equipment used in the

work area are identified

- 1.2 Functions of equipment, component parts and accessories are identified
- 1.3 Applications for workplace activities of different infotechnology equipment and systems are interpreted
- 1.4 Routine faults in operating systems, software applications and operator errors are identified
- 1.5 Sources of information on rectifying/reporting faults with operating equipment, systems and application are identified

## **2 Access and operate computer-based equipment and systems**

- 2.1 Work environments and equipment are adjusted to meet ergonomic requirements and workplace policies and procedures
- 2.2 Systems are accessed and checked as required for viruses
- 2.3 Equipment is set up for work requirements in accordance with workplace procedures and manufacturers guidelines
- 2.4 Infotechnology equipment and software operating manuals and/or help screens are used to inform work practices
- 2.5 Required application software packages and accessories are selected and accessed
- 2.6 Required file and/or data to be accessed is identified
- 2.7 Files/data are filed in accordance with workplace procedures
- 2.8 Shut-down procedures for files, applications and equipment are followed

## **3 Input, store and present files/data**

- 3.1 Data is entered using appropriate equipment, keyboard/mouse, bar code reader, touch screen or other system
- 3.2 Accurate input is confirmed
- 3.3 Files are accessed in accordance with workplace

procedures

3.4 Data is manipulated to suit work requirements and is checked for accuracy

3.5 Saved files are accessed through relevant directories

3.6 Information and disk/s are stored as required

3.7 Information is presented using computerised projection facilities as required

#### **4 Implement workplace procedures for managing and securing data**

4.1 Security procedures are followed in accordance with workplace procedures

4.2 Precautions against the loss or corruption of data are followed in accordance with workplace procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIK2010A Use infotechnology devices in the workplace.

## **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIK2010 Use infotechnology devices in the workplace

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and/or completing electronic documentation through the use of infotechnology devices in the workplace
- adapting to differences in software and equipment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate hazards that may exist when using infotechnology devices in the workplace
- applying relevant legislation and workplace procedures
- identifying and using computer equipment, software, processes and procedures required within the job context
- identifying fault-finding procedures
- implementing contingency plans when using infotechnology devices in the workplace including using security and backup software and procedures
- modifying activities depending on operational contingencies, risk situations and environments
- operating infotechnology devices used within the workplace in accordance with operational requirements
- reading and interpreting instructions, procedures, information, operational instructions and manuals relevant to using infotechnology devices in the workplace
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- work health and safety (WHS)/occupational health and safety (OHS) risks and hazards when using computer equipment for work tasks, and ways of controlling these risks/hazards
- relevant WHS/OHS procedures and guidelines for using computer equipment in the workplace
- typical problems that can occur when using infotechnology devices, and computer applications in the workplace and related appropriate action that can be taken to prevent or solve these problems
- workplace procedures for using computer equipment and application software appropriate for work role.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIK5006 Evaluate software requirements and hardware enhancements

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to evaluate software requirements and hardware enhancements in accordance with relevant regulations, standards and codes of practice and workplace procedures.

It includes analysing requirements for improved computer applications, evaluating relevant software, investigating appropriate hardware enhancements, implementing system improvements and measuring systemic improvement.

Work is under general guidance on progress and outcomes. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

The unit generally applies to those with responsibility for resource coordination and allocation, and who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

K – Technology

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
<b>1 Analyse requirements for improved computer applications</b>	<ul style="list-style-type: none"><li>1.1 Current aspects of business operations requiring improved computer technology are identified</li><li>1.2 Purpose and requirements of improved computer management systems are identified</li><li>1.3 Personnel are consulted for expert advice for potential matches of computer applications to required site operation improvements</li></ul>
<b>2 Evaluate software</b>	<ul style="list-style-type: none"><li>2.1 Potential software programs are evaluated to meet workplace requirements</li><li>2.2 Software applications are investigated for effectiveness to own operation including degree of flexibility, customisation and integration potential</li><li>2.3 Selected option is circulated to appropriate personnel for verification</li><li>2.4 Level of technical support is assessed</li><li>2.5 Software application selection is made</li></ul>
<b>3 Investigate hardware enhancements</b>	<ul style="list-style-type: none"><li>3.1 Hardware systems are evaluated for compatibility with selected software and workplace operations</li><li>3.2 Potential immediate and long-term risks/problems with hardware are identified and assessed</li><li>3.3 Recommendations are drafted and circulated for comment</li><li>3.4 Final recommendations on suitable hardware are made</li></ul>
<b>4 Implement system improvement</b>	<ul style="list-style-type: none"><li>4.1 Selected hardware and software enhancements are implemented</li><li>4.2 Training is provided to potential users of the technology</li><li>4.3 Implementation of hardware and software is monitored</li></ul>
<b>5 Measure systemic improvement</b>	<ul style="list-style-type: none"><li>5.1 Methods of measuring system performance are identified</li><li>5.2 Software and hardware performance is evaluated</li></ul>

- 5.3 System refinements or improvements are determined and implemented
- 5.4 System performance is documented and reported to appropriate personnel

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIK5006A Evaluate software requirements and hardware enhancements.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIK5006 Evaluate software requirements and hardware enhancements

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others when evaluating software requirements and hardware enhancements
- completing documentation related to evaluating software requirements and hardware enhancements
- interpreting and following operational instructions and prioritising work
- measuring operational performance improvements resulting from changes to computer technology
- modifying activities to cater for variations in workplace contexts and environment
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- planning and organising activities
- providing leadership and working collaboratively with others when evaluating software requirements and hardware enhancements
- reading and interpreting instructions, procedures, specifications, technical data and manuals relevant to evaluating software requirements and hardware enhancements
- selecting and applying appropriate software, technology, information systems and procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of relevant Australian standards
- application of current competencies within functional activity
- computer equipment and software applications, capacities and configurations
- focus of operation of computing systems, software and hardware resources, management and workplace operating systems
- problems that may occur when evaluating software requirements and hardware enhancements and action that can be taken to resolve or report these problems
- relevant regulations, codes of practice and legislative requirements for evaluating software requirements and hardware enhancements
- relevant workplace documentation procedures
- resource availability including the competencies of individuals in the team or group
- risks and hazards related to evaluating software requirements and hardware enhancements, and ways of controlling the risks involved
- workplace procedures for evaluating software requirements and hardware enhancements.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIL1001 Complete workplace orientation/induction procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to complete workplace orientation and induction procedures when commencing a new work role, in accordance with regulatory requirements and workplace operational policies and procedures.

It includes identifying major workplace areas in terms of functions, organisational structures and occupations, and organising and accepting responsibility for own workload.

It also includes applying ethical practices, receiving and acting constructively on personal feedback, participating in identifying and meeting own learning needs, and planning and organising a personal daily routine.

Workplace orientation and induction is completed to enable a worker to enter a workplace and to participate safely and effectively in workplace activities.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Identify and act on major workplace areas in terms of functions, organisational structures and occupations**

- 1.1 Workplace layout, flow of materials and goods, and work activities conducted in each work area are identified
- 1.2 Workplace organisational structure and the relationship of each occupation and classification grouping to this structure are outlined
- 1.3 Types of workplace facilities, their purpose and potential risk factors are identified
- 1.4 Equipment and technology used in the workplace are outlined in terms of function and physical characteristics
- 1.5 Individual responsibilities under industrial agreements are identified and acted on in the conduct of assigned duties
- 1.6 Key internal and external customers and the workplace areas that serve them are identified
- 1.7 Workplace hazards are identified and related hazard minimisation procedures are followed
- 1.8 Relevant personal protective equipment (PPE) is identified and correctly used in accordance with regulations and workplace requirements
- 1.9 Workplace emergency procedures are identified and followed in real and simulated emergency situations

**2 Organise and accept responsibility for own workload**

- 2.1 Priorities and deadlines are established in consultation with others (as appropriate) and recorded
- 2.2 Work activities are planned and progress of work is communicated to others whose personal work plans and timelines may be affected
- 2.3 Work is completed to the standard expected in the workplace and in accordance with any guidelines, directions or instructions

- 2.4 Variations and difficulties affecting work requirements are identified through regular reviews and action is taken to report these issues to supervisory staff
  - 2.5 Additional support to improve work is communicated clearly to appropriate personnel
- 3 Apply ethical practices**
- 3.1 Workplace procedures, regulations and legislation appropriate to the position are identified and followed
  - 3.2 Commitments and undertakings to clients, colleagues and supervisors are met
  - 3.3 Required confidentiality is maintained
  - 3.4 Appropriate codes of acceptable and ethical work practices are applied
  - 3.5 Workplace security policies are identified, including their relationship to personal job role
- 4 Receive and act constructively on personal feedback**
- 4.1 Suggestions on ways to improve work are sought regularly from appropriate personnel
  - 4.2 Feedback is acted upon as required to improve work performance
- 5 Participate in identifying and meeting own learning needs**
- 5.1 Workplace operations and equipment, and focus of the activity are identified
  - 5.2 Organisational structure, career paths and training opportunities appropriate to the enterprise are identified
  - 5.3 Steps are taken, in consultation with appropriate personnel, to identify own learning needs by assessing and planning future work requirements
  - 5.4 Appropriate opportunities to learn and develop required competencies are undertaken including establishing networks and working relationships with others
- 6 Plan and organise a personal daily routine**
- 6.1 Daily routine is planned to take into account rosters, industrial agreements and workplace procedures

- 6.2 Clarification of task requirements is sought as appropriate
- 6.3 Achievable time and other performance measures are agreed
- 6.4 Tasks are completed and variations to plan are identified and reported

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL1001A Complete workplace orientation/induction procedures.

## Links

# Assessment Requirements for TLIL1001 Complete workplace orientation/induction procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating effectively with others when completing workplace orientation and induction procedures
- completing documentation related to work activities
- demonstrating an understanding of the immediate management structure relating to the job role
- demonstrating an understanding of workplace structure and how it applies to the job role
- identifying and correctly using equipment, processes and procedures
- identifying workplace products and services and their features
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting instructions, procedures, information and signs relevant to work activities
- selecting and using required personal protective equipment conforming to industry, and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others when completing workplace orientation and induction procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic workplace documentation and record keeping procedures and requirements
- conditions of service including: employer and employee obligations under awards, employment contracts, WHS/OHS and other regulations in relation to engagement, working times and conditions, and dismissal and discipline arrangements
- customer service standards and procedures
- emergency procedures
- personal protective equipment and instructions for its use
- site or workplace layout
- workplace hazards and related hazard minimisation procedures
- workplace procedures, standards and duty of care requirements including WHS/OHS and environmental protection responsibilities
- workplace structures and the roles and responsibilities of team/group members.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIL2008 Complete routine administrative tasks

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to complete routine administrative activities within the transport and logistics industry, in accordance with relevant regulations and workplace procedures.

It includes receiving and distributing incoming mail, receiving and despatching outgoing mail, filing documents, and receiving and relaying written and oral messages.

Work is performed under supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Receive and distribute incoming mail

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Incoming mail is checked and registered to ensure accuracy of records

- 1.2 Urgent and confidential mail is identified and distributed promptly to addressee
  - 1.3 Mail is sorted and despatched to nominated person/location
  - 1.4 Damaged, suspicious or missing items are recorded and reported as required, in accordance with workplace procedures
- 2 Receive and despatch outgoing mail**
- 2.1 Outgoing mail is collected from organisational sections, checked and sorted to ensure all items are correctly prepared for despatch
  - 2.2 Mail items are collated, recorded in the register as required and correctly despatched to meet designated timelines
- 3 File documents**
- 3.1 Documents are classified, sorted and filed in accordance with workplace procedures
  - 3.2 Classification uncertainties are referred to other personnel in accordance with workplace procedures
  - 3.3 Documents are identified and retrieved
  - 3.4 Specified files/records are located within designated timelines
  - 3.5 Located files are extracted from system and despatched to nominated person
  - 3.6 Security and confidentiality procedures are followed
- 4 Receive and relay written and oral messages**
- 4.1 Messages are received and accurately recorded
  - 4.2 Areas of uncertainty are clarified with message conveyor where feasible
  - 4.3 Messages are relayed to nominated person within designated timelines

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL2008A Complete routine administrative tasks.

## Links

# Assessment Requirements for TLIL2008 Complete routine administrative tasks

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating and working effectively with others when completing routine administrative tasks
- completing documentation related to routine administrative tasks
- handling mail and messages in accordance with workplace procedures
- interpreting and following operational instructions and applying relevant legislation and workplace procedures
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- equipment, methods and strategies used in routine workplace administrative operations
- hazards in routine workplace administrative operations and related precautions to control risks
- housekeeping standards and procedures
- requirements of work systems operations and relevant equipment
- typical problems that can occur when completing routine workplace administrative tasks and appropriate action that can be taken to prevent or solve these problems

- work health and safety (WHS)/occupational health and safety (OHS) procedures and guidelines relevant to administrative operations
- workplace procedures and policies for completing routine administrative tasks.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

## TLIL2031 Monitor and process attendance records

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to monitor and process attendance records in accordance with regulatory and workplace requirements as part of work activities undertaken in the transport and logistics industry.

It includes monitoring attendance records as well as checking and processing attendance information.

Work is performed individually but the ability to work within a team environment may also be required.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

L – Resource Management

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Monitor attendance records

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Hours worked, as recorded for each employee, are accessed, checked and documented on a prescribed time basis

- 1.2 Employee record cards or other daily time records showing hours absent are followed up to ensure authorised absences are accurately recorded
  - 1.3 Employee daily time records showing additional hours worked are followed up to determine whether additional payments are authorised
  - 1.4 Unauthorised absences are notified to appropriate personnel in a timely way to ensure follow-up action is initiated
  - 1.5 Employee attendance sheets are received, checked and processed to ensure accurate employee records are maintained
- 2 Process attendance records**
- 2.1 Unexplained absences are identified, confirmed and appropriate personnel are notified for follow-up action
  - 2.2 Timesheets, or equivalent, are checked and forwarded to payroll department for costing purposes
  - 2.3 Employee record cards or other identification system requirements are checked and redistributed in a timely way

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL2031A Monitor and process attendance records.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIL2031 Monitor and process attendance records

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying conditions of employment and industrial agreements and awards
- applying relevant legislation and workplace procedures
- checking, monitoring and processing attendance records as per workplace procedures
- communicating and working effectively with others when monitoring and processing attendance records
- completing documentation related to work activities
- conducting simple calculations when monitoring and processing attendance records
- modifying activities depending on operational contingencies and environments
- operating electronic communication equipment to required protocol
- reading and interpreting instructions, procedures and information relevant to work activities
- reporting identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant computer, communications and office equipment required to monitor and process attendance records
- working systematically with required attention to detail.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation and reporting requirements for monitoring and processing attendance records including computer-based personnel recording systems
- elements of human resources systems relevant to monitoring and processing attendance records including: workplace timekeeping practices, conditions of employment, labour/costing practices, industrial agreements and awards, auditing requirements, payroll practices and procedures, personnel records requirements, and computer-based personnel recording systems
- focus of operation of work systems, equipment, management and site operating systems for monitoring and processing attendance records
- problems that may occur when monitoring and processing attendance records and appropriate action that can be taken to resolve these problems
- regulations and codes of practice relevant to monitoring and processing attendance records
- workplace procedures and policies for monitoring and processing attendance records.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIL2041 Monitor and record rolling stock locations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to monitor and record rolling stock locations in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes identifying rolling stock, identifying planned movements, and verifying and recording movements in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures when monitoring and recording rolling stock locations, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

# Assessment Requirements for TLIL2041 Monitor and record rolling stock locations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- completing relevant documentation
- documenting and recording rolling stock locations
- gathering information on train movements
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- operating rolling stock management system and/or computer programs to track rolling stock movements
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions, in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- emergency procedures
- management systems and/or computer programs for rolling stock tracking
- problems that may occur when monitoring and recording rolling stock locations and related action that should be taken
- relevant documentation requirements
- relevant rail danger zones
- relevant workplace procedures for monitoring and recording rolling stock locations
- safeworking systems and requirements
- type, specifications, capacity, characteristics and features of rolling stock
- workplace hazards that may exist when monitoring and recording rolling stock locations and ways in which the risks involved may be eliminated or controlled.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## **TLIL2048 Prepare for train departure**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to prepare for train departure in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes checking rolling stock, equipment and related documentation; checking for planned variations from normal routines; and completing documentation as required. Activities are undertaken for both freight and passenger trains.

For passenger trains, it also includes checking passenger facilities and assessing stock levels as required in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when preparing train for departure, as part of work activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

L – Resource Management

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Check rolling stock and train equipment**

- 1.1 Rolling stock is checked to ensure it is fit for operation in accordance with regulatory requirements and workplace procedures
- 1.2 Hazards are identified, risks are assessed and risk control measures are implemented
- 1.3 Train equipment is checked for effective operation in accordance with regulatory requirements and workplace procedures
- 1.4 Rolling stock or equipment faults, defects or problem areas are identified and remedial action is organised in accordance with regulatory requirements and workplace procedures

### **2 Check for planned variations from normal routines**

- 2.1 Documentation related to operational variations and special instructions are identified and accessed
- 2.2 Planned variations and special instructions for train are noted and actioned in accordance with workplace procedures

### **3 Check passenger facilities**

- 3.1 Passenger facilities are checked to ensure they are clean and operating as required
- 3.2 Passenger convenience items are checked as required to ensure they meet the recommended levels
- 3.3 Variations from established standards are reported or rectified, in accordance with workplace procedures and manufacturer specifications
- 3.4 Major faults are reported to appropriate person in accordance with workplace procedures

### **4 Check stock levels**

- 4.1 Stock levels are checked to ensure required amounts are present
- 4.2 Adjustments to stock levels are made as required, in accordance with workplace procedures

## **5 Complete documentation**

- 5.1 Documentation is completed as required after rolling stock and train equipment are checked, in accordance with workplace procedures
- 5.2 Documentation related to checking passenger facilities and stock levels is completed as required, in accordance with workplace procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIL2048A Prepare for train departure.

## **Links**

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIL2048 Prepare for train departure

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- assessing stock levels and completing documentation
- checking equipment and related documentation
- checking for planned variations from normal routines
- checking passenger facilities
- checking rolling stock
- communicating effectively with others
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying, selecting and using relevant equipment and materials
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- essential equipment, supplies and materials required for trip
- how to identify possible fault or defects that may occur with rolling stock and equipment
- normal level of use of consumable items such as food and beverages on passenger trains
- passenger train customer service and cleanliness standards
- position and number of fire extinguishers on passenger trains
- problems that may occur when preparing a train for departure, and action that should be taken to resolve these problems
- relevant documentation requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations including codes of practice and/or guidelines
- rolling stock and car sequence, and relevant labelling requirements
- rolling stock and equipment checks
- structure of the train consist
- types of rolling stock and/or passenger cars and their features
- workplace procedures for preparing a train for departure, including for passenger train operation
- workplace procedures for reporting identified rolling stock and equipment defects.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

## Links

Companion Volume implementation guides are found in VETNet -

## **TLIL3035 Allocate motive power**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to allocate motive power in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes identifying train operating requirements, establishing motive power requirements and availability, allocating individual motive power units, and adjusting motive power allocation in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

While work is performed individually, it will generally be undertaken within a team environment.

It involves the application of routine operational principles and procedures to allocate motive power across a variety of operational contexts in the Australian rail systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

L – Resource Management

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Identify train operating requirements**

- 1.1 Train timetables, shunting requirements and track conditions for each line or service are identified and records are kept up-to-date
- 1.2 Tonnage of individual trains is identified to enable planning of suitable motive power
- 1.3 Routine usage of motive power units is established to provide an initial allocation framework
- 1.4 Contingency plans covering operational problems are developed and their impact on motive power requirements are taken into account

### **2 Establish motive power requirements and availability**

- 2.1 Availability of all motive power units is determined including location, operational status, special and routine maintenance requirements
- 2.2 Motive power required to haul tonnage is determined for each train/service and support activity consistent with track geography, gauge, train weight and conditions is identified

### **3 Allocate individual motive power units**

- 3.1 Motive power units, including railcar and locomotive types, are allocated to ensure train and support activities are serviced
- 3.2 Allocations are documented and communicated to operations personnel and feedback is sought to ensure suitability of units planned
- 3.3 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are identified and included in allocation considerations
- 3.4 Documentation authorising the use of allocated motive power for the train service is completed and processed

### **4 Monitor and adjust motive power allocation**

- 4.1 Use and requirements for motive power are monitored and possible allocation changes are determined to maintain efficient use of resources
- 4.2 Contingency plans for unexpected non-availability of specific motive power units or operational non-performance are implemented

- 4.3 Changes to allocation are negotiated with operational personnel and motive power maintenance personnel, to achieve suitable outcomes

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL3035A Allocate motive power.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIL3035 Allocate motive power

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adjusting motive power allocation
- applying relevant safeworking system and workplace procedures
- communicating and negotiating effectively with others
- completing relevant documentation
- establishing motive power requirements and availability, allocating individual motive power units
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying train operating requirements
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures and information
- reading and interpreting train graphs and diagrams
- reporting and/or rectifying problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant computing and communications equipment and materials when allocating motive power
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others when allocating motive power
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- allocation and maintenance schedules for motive power units
- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- communication and negotiation requirements when allocating motive power
- crew requirements and working patterns
- documentation and record requirements
- emergency management procedures
- equipment and materials used when allocating motive power, and procedures that should be followed in their use
- gauges, distance, gradients and tonnages for relevant track area
- motive power units and specifications, capabilities and capacity
- problems that may occur when allocating motive power and appropriate action that can be taken to resolve these problems
- relevant WHS/OHS and environmental procedures and regulations including codes of practice
- timetables and train details
- track specifications and limitations
- workplace procedures and policies for allocating motive power.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment

currently used in industry

- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

## Links

## TLIL3039 Assist with train operations

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to assist with train operations as a driver assistant or second-person, in accordance with workplace procedures and the requirements of the relevant safeworking system and codes of practice.

It includes assisting with preparations for train operation, assisting with the operation of the train, assisting with loading and unloading operations and handing over or stabling the train in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed in conjunction with a train driver. It involves the application of routine operational principles and procedures when assisting with train operations across a variety of operational workplace contexts within the Australian rail system.

Visual inspections include:

- wheels and braking equipment for signs of wear or damage
- flexible connections and fittings for signs of wear or damage
- couplings for signs of wear or damage
- fuel, oil and water
- air leakage
- motive power unit equipment and, if applicable, end of train monitoring device
- rolling stock for defects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Assist with preparing for train operation**

- 1.1 Planning documentation is accessed and interpreted to determine journey purpose, constraints, loading information and characteristics, and is confirmed with driver
- 1.2 Visual inspections of equipment are carried out and identified faults or defects are appropriately reported in accordance with workplace procedures and manufacturer specifications
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Assistance is provided with pre-operational checking and testing of equipment in accordance with workplace policies and procedures

### **2 Assist with train operation**

- 2.1 Motive power unit is monitored in conjunction with driver, in accordance with workplace procedures
- 2.2 Guidance is provided to driver while stopping and starting to ensure safety of personnel and equipment
- 2.3 Train running schedules are monitored and recorded to assist with on-time running
- 2.4 Performance of equipment and rolling stock is monitored en route to identify faults or defects and appropriate action is taken as required in accordance with workplace procedures
- 2.5 Security of loading and all other aspects of the train are monitored en route and abnormalities are dealt with in accordance with workplace procedures

- 2.6 Signals and track/road are monitored en route in accordance with workplace procedures
- 3 Stable or handover train**
- 3.1 Appropriate assistance is provided when train is stabled in accordance with safeworking system requirements, operational instructions and workplace procedures
- 3.2 Safety devices are activated or put in position in accordance with operational instructions and workplace procedures to ensure the safety of personnel and equipment
- 3.3 Prior to handover, documentation relevant to the train and activities undertaken en route is updated, provided to relief crew and/or forwarded to appropriate personnel in accordance with workplace policies and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL3039A Assist with train operations.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIL3039 Assist with train operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying relevant rail safety and workplace procedures
- assisting driver in monitoring train performance and as required, security of load
- assisting in stabling and securing train
- assisting with preparing trains prior to operation
- communicating effectively with others when assisting with train operations
- conducting handover and stabling activities correctly
- documenting train journey and incidents
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying possible faults and defects that could occur and appropriate responses
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating operational hazards and taking appropriate action
- monitoring journey schedule
- monitoring the operation of different train types in normal operation in accordance with workplace procedures
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying problems, faults or malfunctions, in accordance workplace procedures
- selecting and using relevant equipment and materials when assisting with train operations
- working collaboratively with others when assisting with train operations
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, codes of practice and/or guidelines
- documentation required during and after train operations
- electronic communications equipment protocols
- emergency procedures
- motive power unit and rolling stock systems
- problems that can occur when assisting with train operations and action that should be taken
- procedures for assisting a driver in monitoring train operations and performance
- procedures for completing required documentation
- procedures for coupling/uncoupling motive power units and rolling stock
- procedures for fixed and hand signalling and voice communication
- procedures for identifying equipment defects and assessing for appropriate action
- relevant rail danger zones
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures
- relevant safeworking systems and requirements
- relevant train operations, procedures and operating requirements
- track or road characteristics
- train characteristics.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## **TLIL3052 Plan urban passenger train consists**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to plan urban passenger train consists in accordance with regulatory and workplace requirements

It includes identifying passenger requirements and resources, planning connections with other passenger services, and planning consists for urban passenger trains.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under general supervision. It involves applying basic principles, routine procedures and regulatory requirements to plan urban passenger train consists.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

L – Resource Management

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

Elements describe the            Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

**1 Identify urban passenger requirements and resources**

- 1.1 Passenger usage patterns, specific bookings and external events likely to influence passenger numbers are monitored and applied to urban passenger train consist planning
- 1.2 Requirements for carriages and motive power units for urban passenger trains are adjusted in light of passenger demand
- 1.3 Train crewing needs and/or constraints are identified to ensure consists are compatible with available resources
- 1.4 Passenger usage patterns are monitored and train configurations are adjusted in accordance with workplace procedures
- 1.5 Shunting and marshalling requirements are identified for planned consists in accordance with timetable requirements
- 1.6 Hazards are identified, risks are assessed and control measures are implemented

**2 Plan connections with other passenger services**

- 2.1 Train timetables are compared with timetables from other passenger services for coordination purposes
- 2.2 Passenger flow patterns for related services are checked to ensure smooth flow patterns
- 2.3 Modifications to existing timetables are made to ensure mutually supporting passenger services are achieved where possible
- 2.4 Suitable passenger transit holding areas between services are identified and included in plan
- 2.5 Timetable reviews and passenger flow issues are discussed with appropriate external passenger service providers

**3 Plan consists for urban passenger trains**

- 3.1 Consists are planned, taking into account the need to move passengers efficiently within constraints of carriage availability, motive power availability, personnel availability, track layout, track condition, gauge and weight
- 3.2 Details of urban train consists are forwarded to yard and terminal operations for planning purposes

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL3052A Plan urban passenger train consists.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIL3052 Plan urban passenger train consists

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- applying relevant safeworking system and workplace procedures
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting timetables, time graphs and diagrams
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- planning passenger support services including transit arrangements
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying identified problems, in accordance with regulatory requirements and workplace procedures
- selecting the most cost effective motive power units and carriages to provide required urban passenger train services
- working collaboratively with others when planning urban passenger train consists
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- appropriate urban passenger train consists and types of passenger trains
- documentation and reporting requirements for planning urban passenger train consists
- factors affecting passenger load capacity for all relevant urban train services provided
- focus of operation of work systems, equipment, management and site operating systems for planning urban passenger train consists
- maximum urban passenger train lengths
- platform and station details
- problems that may occur when planning urban passenger train consists and appropriate action that can be taken to resolve these problems
- relevant passenger flow patterns for related services
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- running times of urban trains
- shunting and marshalling requirements
- signalling equipment used at the stations or platforms
- workplace procedures and policies for planning urban passenger train consists.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

## **TLIL3065 Implement a track occupancy authority**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to implement a Track Occupancy Authority (TOA), in accordance with Rail Infrastructure Manager, legislative and regulatory requirements.

It includes preparing for a TOA, cancelling or fulfilling a TOA and managing unsafe situations or emergencies.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety but does not include the implementation of worksite protection.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

L – Resource Management

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Prepare for track occupancy authority**

- 1.1 Site safety plan is sourced and TOA terms are read and clarified as required
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Network Control Officer is notified of intention to use a TOA
- 1.4 Work group supervisor is advised of network control officer's decision

### **2 Issue a track occupancy authority**

- 2.1 Permission for a TOA is requested from Network Control Officer
- 2.2 Permission for a TOA is documented in accordance with Rail Infrastructure Manager and/or organisational requirements
- 2.3 Work group supervisor is advised that occupancy has been issued
- 2.4 Alterations to the TOA are negotiated with Network Control Officer as required
- 2.5 Multiple worksites are protected in accordance with rules and procedures and/or organisational requirements
- 2.6 Work group supervisor is advised that the TOA has been issued

### **3 Cancel or fulfil the track occupancy authority**

- 3.1 Communication is maintained with work group supervisor to confirm completion of work activity and that track is safe for rail traffic
- 3.2 Network Control Officer is informed that TOA has been cancelled or fulfilled
- 3.3 Fulfilment of the TOA is documented in accordance with Rail Infrastructure Manager requirements

### **4 Manage unsafe situations or**

- 4.1 Unsafe situations and/or emergencies are identified
- 4.2 Work group is instructed to move to a safe place

**emergencies**

- 4.3 Appropriate action is taken to minimise risk and/or injury in accordance with workplace procedures
- 4.4 Emergencies and/or incidents are recorded and reported to relevant personnel in accordance with workplace procedures

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

**Unit Mapping Information**

This unit replaces and is equivalent to TLIL3065B Implement a track occupancy authority.

**Links**

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIL3065 Implement a track occupancy authority

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace safeworking system rules and procedures
- communicating effectively with individuals and work groups
- completing Track Occupancy Authority (TOA) documentation
- complying with the application requirements for a TOA
- following workplace policies, procedures and protocols
- identifying job hazards, unsafe situations and emergencies and taking required action to minimise, control or eliminate identified hazards.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- operational communications protocols and systems
- Rail Infrastructure Manager policies, procedures, rules and protocols for identified unsafe situations or emergencies
- Rail Infrastructure Manager safeworking system rules and procedures
- rail terminology as defined by the relevant Rail Infrastructure Manager
- types of track protection and track occupancy safeworking systems
- worksite protection plan.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of

assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

## Links

# TLIL3071 Control and coordinate local rail traffic movement

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to control local rail traffic movement in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes monitoring the status of the current train area plan, implementing the daily working timetable, controlling rail traffic movement, implementing contingency plans and updating traffic movement documentation in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety and safeworking requirements, and to comply with relevant codes of practice and/or guidelines.

The unit involves the application of operational principles, regulations, and safeworking codes, protocols and procedures when controlling rail traffic movement, as part of workplace activities across a variety of operational contexts within the Australian rail industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Monitor status of local conditions and timetable**

- 1.1 Rail traffic movements and associated activities are analysed to establish current situation
- 1.2 Proposed rail traffic movements and associated activities are identified to establish status of local conditions and timetable in accordance with organisational procedures and policies
- 1.3 Train notices are checked for conflicts and adjustments are made to local timetable as required
- 1.4 Identified anomalies are reported in accordance with organisational procedures and policies

### **2 Control local rail traffic movement**

- 2.1 Rail traffic movements are coordinated with relevant personnel in accordance with organisational policies and procedures
- 2.2 Signalling systems are operated and monitored to ensure safe movement of rail traffic
- 2.3 Irregularities that may affect the timetable are reported and recorded in accordance with organisational procedures and policies

### **3 Communicate with relevant personnel**

- 3.1 Communication with relevant rail safety workers is undertaken to ensure they are informed of local rail traffic movements, in accordance with organisational policies and procedures
- 3.2 Communication with other relevant personnel is undertaken to ensure they are informed of local rail traffic movements, in accordance with organisational policies and procedures

### **4 Implement contingency plans as instructed**

- 4.1 Contingency plan to suit disruption, system failure or fault is actioned as instructed, in accordance with organisational policies and procedures
- 4.2 Resources to respond to the contingency are arranged as required, in accordance with relevant organisational policies and procedures
- 4.3 Rail traffic movements are adjusted in accordance with organisational and local operational requirements

- 4.4 Communications with network control officer and other relevant personnel are established and maintained as required
- 5 Update local rail traffic movement documentation**
- 5.1 Rail traffic movement documentation is amended, compiled and recorded in accordance with organisational policies and procedures
- 5.2 Rail traffic movement information and documentation are handed over when relieved, and/or at shift completion in accordance with organisational policies and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL3071A Control and coordinate local rail traffic movement.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIL3071 Control and coordinate local rail traffic movement

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- controlling rail traffic movements by using appropriate signalling and safeworking systems
- communicating effectively with others
- completing relevant documentation and entering data
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule and local conditions
- operating communications systems in accordance with workplace procedures
- reading, interpreting and following relevant instructions, procedures and information
- reporting problems, faults and malfunctions promptly, in accordance with organisational procedures
- using appropriate numeric functions when implementing contingency plans.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- area communications systems and workplace procedures
- applicable state/territory legislated rail safety and safeworking requirements, relevant codes of practice and/or guidelines
- organisational procedures for controlling and coordinating rail traffic operations
- problems that may occur when controlling local rail traffic and related action that should be taken
- relevant documentation requirements

- signalling, hand signals and control systems and operations
- specific local conditions and restrictions
- train notices, including special train notices.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## **TLIL3072 Operate signal panel or equipment**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to operate a signal panel and/or equipment in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes preparing for operation, controlling rail traffic movement, implementing contingency plans, updating traffic movement documentation and handing over or relieving the signaller in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety and safeworking requirements, and to comply with relevant codes of practice and/or guidelines.

The unit involves the application of operational principles, regulations, safeworking codes, protocols and procedures when operating a signal panel and/or equipment, as part of workplace activities across a variety of operational contexts within the Australian rail industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

L – Resource Management

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Prepare to operate signal control location**

- 1.1 Reporting for duty is undertaken in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements and organisational policies and procedures
- 1.2 Appropriate network control officer is contacted as required in accordance with organisational policies and procedures
- 1.3 Documentation is checked for local activities and/or rail traffic movements that may affect rail traffic operations in accordance with organisational procedures and policies
- 1.4 Signalling equipment is switched in for use as required
- 1.5 Operation of equipment is tested in accordance with organisational policies and procedures

### **2 Control local rail traffic movements**

- 2.1 Local rail traffic movements are coordinated with relevant personnel in accordance with organisational policies and procedures
- 2.2 Signalling systems are operated and monitored to ensure safe movement of rail traffic
- 2.3 Activities that may affect operations are reported and recorded in accordance with organisational policies and procedures

### **3 Communicate with relevant personnel**

- 3.1 Communication with relevant rail safety workers is undertaken to ensure they are informed of local rail traffic movements, in accordance with organisational policies and procedures
- 3.2 Communication with other relevant personnel is undertaken to ensure they are informed of local rail traffic movements, in accordance with organisational policies and procedures

### **4 Monitor and respond to system alarms**

- 4.1 System alarms are monitored as required by organisational policies and procedures
- 4.2 Activated alarms are responded to appropriately and reported to appropriate personnel in accordance with organisational policies and procedures

- 4.3 Identified faults are reported to appropriate personnel in accordance with organisational policies and procedures
- 5 Implement contingency plans as instructed**
- 5.1 Contingency plan to suit disruption, system failure or fault is actioned as instructed, in accordance with organisational policies and procedures
- 5.2 Local rail traffic movements are adjusted in accordance with organisational and/or local operational requirements
- 5.3 Communications with network control officer and other relevant personnel are established and maintained as required
- 6 Update local rail traffic movement documentation**
- 6.1 Local rail traffic movement documentation is amended, compiled and recorded in accordance with organisational policies and procedures
- 6.2 Local rail traffic movement information and documentation are handed over when relieved and/or at the completion of shift, in accordance with organisational policies and procedures
- 7 Handover control to relieving signaller**
- 7.1 Relieving signaller is informed of operational status and ongoing issues in accordance with organisational policies and procedures
- 7.2 Documentation is checked to ensure it is up-to-date and is then endorsed in accordance with organisational policies and procedures
- 8 Take over control from signaller**
- 8.1 Information on operational status and ongoing issues is received from signaller in accordance with organisational policies and procedures
- 8.2 Documentation is checked to ensure it corresponds to operational status and is then endorsed in accordance with organisational policies and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL3072A Operate signal panel or equipment.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIL3072 Operate signal panel or equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking system rules and workplace procedures
- communicating effectively with others
- completing relevant documentation and entering data accurately
- controlling rail traffic movement
- handing over or relieving the signaller
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating a signal panel or equipment
- operating communications systems in accordance with workplace protocol
- reading, interpreting and following relevant instructions, procedures and information
- reporting and rectifying identified problems, faults and malfunctions within limits of own role, in accordance with organisational procedures
- updating traffic movement documentation
- using appropriate numeric functions when controlling rail traffic movement.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- organisational procedures for controlling and coordinating local rail traffic operations
- problems that may occur when operating signal panel or equipment, and action that should be taken to resolve these problems
- relevant documentation requirements

- relevant sections of applicable state/territory legislated rail safety and safeworking requirements, relevant codes of practice and/or guidelines
- signalling and control systems and operations
- specific local conditions and restrictions
- types of communications systems available
- types of surveillance and alarm systems in use.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation with terminology as defined by the applicable Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

# TLIL3082 Implement absolute signal blocking

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to apply absolute signal blocking (ASB) protection for the infrastructure and work group on a rail network during rail work activities by utilising a signal system managed by a Network Control Officer, in accordance with Rail Infrastructure Manager, legislative and regulatory requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety but does not include the implementation of worksite protection.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Prepare for absolute signal blocking protection**
  - 1.1 Worksite protection plan is sourced and read for the terms of ASB protection
  - 1.2 Network Control Officer is notified of intention to use ASB protection
  - 1.3 Protection officer is advised of Network Control Officer's decision
- 2 Apply absolute signal blocking protection**
  - 2.1 Permission to apply ASB is requested from Network Control Officer
  - 2.2 Permission to apply ASB is documented in accordance with Rail Infrastructure Manager and/or organisational requirements
  - 2.3 Protection officer is advised ASB has been applied
- 3 End absolute signal blocking protection**
  - 3.1 Communication is maintained with Network Control Officer to confirm completion of work activity and track is safe for rail traffic
  - 3.2 Permission to remove ASB protection is documented in accordance with Rail Infrastructure Manager and/or organisational requirements
  - 3.3 Network Control Officer is informed of completion of work
- 4 Manage unsafe situations or emergencies**
  - 4.1 Unsafe situations and/or emergencies are identified
  - 4.2 Work group is instructed to move to a safe place
  - 4.3 Appropriate action is taken to minimise risk and/or injury in accordance with workplace procedures
  - 4.4 Emergencies and/or incidents are recorded and reported to relevant personnel in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL3082A Implement absolute signal blocking.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIL3082 Implement absolute signal blocking

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking system workplace rules and procedures
- communicating effectively with individuals and work groups
- completing absolute signal blocking (ASB) documentation
- explaining and implementing site safety plan
- explaining how to end the use of ASB protection
- following Rail Infrastructure Manager workplace policies, rules, procedures and protocols
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying unsafe situations and emergencies
- recognising the difference between permissive and absolute signals
- requesting ASB protection from Network Control Officer.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- operational communications protocol and systems
- Rail Infrastructure Manager policies, procedures and protocols for identified unsafe situations or emergencies within workplace role
- Rail Infrastructure Manager rules and system of safeworking procedures to implement ASB
- rail terminology as defined by the applicable Rail Infrastructure Manager
- relevant rail danger zones
- site safety plan
- worksite protection plan.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations*, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations*, current at the time of assessment.

# **TLIL3083 Implement a track work authority and manage rail traffic through worksites**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit describes the skills and knowledge required to implement a track work authority (TWA) and manage rail traffic through worksites, in accordance with Rail Infrastructure Manager rules, procedures and protocols for rail safety.

It includes preparing for a TWA, managing rail traffic, fulfilling a TWA and managing unsafe situations or emergencies.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety but does not include the implementation of worksite protection.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

L – Resource Management

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Prepare for track work authority**

1.1 Worksite protection plan is sourced and TWA terms are read and clarified as required

1.2 Hazards are identified, risks are assessed and control measures are implemented

1.3 Network Control Officer is notified of the intention to use a TWA

1.4 Protection officer worksite protection responsibilities are identified from worksite protection plan

### **2 Issue a track work authority**

2.1 Permission to issue a TWA is requested from Network Control Officer

2.2 Permission to use a TWA is documented in accordance with Rail Infrastructure Manager requirements

2.3 Equipment required for TWA protection is identified and checked for functional condition

2.4 Protection is placed in accordance with worksite protection plan

2.5 Work group supervisor is advised that protection is in place

### **3 Manage rail traffic**

3.1 Vigilance is maintained and protection officer is alerted to approaching rail traffic in accordance with workplace rules and procedures

3.2 Arrangements are made for equipment to be removed from the danger zone

3.3 Work group is instructed to move to a safe place prior to passage of rail traffic

3.4 Safety of track for passage of rail traffic is confirmed with work group supervisor

3.5 Instructions are issued to rail traffic in accordance with workplace procedures

3.6 Worksite protection is implemented prior to work groups entering the track worksite in accordance with workplace rules and procedures

- 3.7 Protection, placement and equipment is continually monitored for effectiveness in accordance with safety assessment
- 4 Fulfil a track work authority**
  - 4.1 Communication is conducted with work group supervisor to confirm that work activity is complete and track is safe
  - 4.2 Network Control Officer is advised that the TWA has been fulfilled
  - 4.3 Fulfilment of TWA is documented in accordance with Rail Infrastructure Manager and/or organisational requirements
- 5 Manage unsafe situations or emergencies**
  - 5.1 Unsafe situations and/or emergencies are identified
  - 5.2 Work group is instructed to move to a safe place
  - 5.3 Appropriate action is taken to minimise risk and/or injury in accordance with workplace procedures
  - 5.4 Emergencies and/or incidents are recorded and reported to relevant personnel in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL3083A Implement a track work authority and manage rail traffic through worksites.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIL3083 Implement a track work authority and manage rail traffic through worksites

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking systems and workplace procedures for a track work authority (TWA) and managing rail traffic through worksites
- communicating effectively with individuals and work groups
- conducting a pre-start briefing for work group supervisor
- coordinating protection as rail traffic through worksites
- determining and setting out protection
- explaining how to manage unsafe situations and emergencies
- following workplace policies, rules, procedures and protocols
- identifying appropriate resources for worksite protection
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying, responding to and/or reporting unsafe situations and emergencies
- operating electronic communications equipment to required protocol
- placing worksite protection
- reading and interpreting responsibilities for worksite protection from the worksite safety plan.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria include knowledge of:

- equipment available for worksite protection
- hand, light and flag signals and signs used by day or night
- operational communications protocols and systems
- positioning requirements for hand signallers
- Rail Infrastructure Manager policies, procedures, rules and protocols for identified unsafe situations or emergencies within workplace role
- Rail Infrastructure Manager rules and procedures
- rail terminology as defined by the relevant Rail Infrastructure Manager system
- relevant rail danger zones
- relevant workplace safeworking systems , rules and procedures
- TWA as defined by the relevant Rail Infrastructure Manager safeworking system
- worksite protection plans.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

## TLIL3084 Implement a local possession authority

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to apply local possession authority (LPA) protection for the infrastructure and/or work groups on a rail network during rail work activities using an electronic or manual documentation system, in accordance with Rail Infrastructure Manager, legislative and regulatory requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety but does not include the implementation of worksite protection.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

L – Resource Management

### Unit Sector

Not applicable.

### Elements and Performance Criteria

Elements describe the            Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

**1 Plan for local possession authority**

- 1.1 Worksite protection plan is developed to determine LPA worksite protection arrangements
- 1.2 Work group supervisor is advised of advertised approval
- 1.3 Resources are organised to provide adequate protection for infrastructure and work group during rail work activity

**2 Implement local possession authority**

- 2.1 Permission to implement LPA is requested from Network Control Officer
- 2.2 Resources to provide protection for LPA are deployed in accordance with worksite protection plan
- 2.3 Work group supervisor is advised that LPA has been issued
- 2.4 Adjustments to LPA are negotiated with Network Control Officer, as required
- 2.5 Each worksite within the LPA is provided with a protection officer while work is being performed
- 2.6 Multiple worksites are protected in accordance with worksite protection plan
- 2.7 Rail traffic movements between worksites and within LPA limits are coordinated
- 2.8 Authorisation is given to rail traffic entering the LPA

**3 Fulfil local possession authority**

- 3.1 Confirmation is obtained from work group supervisor that work activity is completed and track is safe for rail traffic
- 3.2 Resources used to provide protection are removed in accordance with advertised approval
- 3.3 LPA is fulfilled for entire portion of track included within the LPA or is fulfilled progressively for one or more portions of track included in the LPA
- 3.4 Arrangements are made for work to continue under another work on track authority, as required

**4 Manage unsafe situations or emergencies**

- 4.1 Unsafe situations and/or emergencies are identified
- 4.2 Work group is instructed to move to a safe place
- 4.3 Appropriate action is taken to minimise risk and/or injury in

accordance with workplace procedures

- 4.4 Emergencies and/or incidents are recorded and reported to relevant personnel in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL3084A Implement a local possession authority.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIL3084 Implement a local possession authority

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant system of safeworking and workplace procedures
- communicating effectively with individuals and work group supervisor
- completing local possession authority (LPA) using an electronic or manual documentation system
- deploying resources to provide protection for the LPA in accordance with worksite protection plan
- explaining how to fulfil an LPA
- following Rail Infrastructure Manager workplace policies, rules, procedures and protocols
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying unsafe situations and emergencies
- implementing worksite protection plans
- issuing LPAs in accordance with worksite protection plan to ensure multiple worksites are protected
- managing worksite protection plans.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- LPA electronic or manual documentation system
- operational communications protocol and systems
- Rail Infrastructure Manager LPA system of safeworking rules and, procedures
- Rail Infrastructure Manager policies, procedures and protocols for identified unsafe situations or emergencies within workplace role

- rail terminology as defined by the applicable Rail Infrastructure Manager
- relevant rail danger zones
- types of track protection
- worksite protection plan.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation with terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

## TLIL4005 Apply conflict/grievance resolution strategies

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to apply conflict or grievance resolution strategies to resolve issues that may occur in the course of work.

It includes identifying potential conflict situations, implementing appropriate conflict resolution strategies and using effective interpersonal skills.

Work is performed under minimum supervision with general guidance on progress and outcomes. Work involves discretion and judgement for self and others when managing and resolving conflict or grievances internal and external to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

L – Resource Management

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify potential conflict situations

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Signs and stages of conflict or grievance are recognised

1.2 Possible causes of conflict or grievance are identified

- 2 Implement conflict resolution strategies**
- 2.1 Factors and issues relevant to conflict or grievance are clarified
  - 2.2 Strategies for dealing with conflict or grievance are developed
  - 2.3 Options for resolving the conflict or grievance are presented that enable constructive responses to be negotiated and established relationships to continue
  - 2.4 Strategies are implemented to resolve the source of conflict
  - 2.5 Outcomes of the process are monitored to ensure objectives continue to be met
- 3 Use effective interpersonal skills**
- 3.1 Effective verbal and non-verbal communication is used during negotiations, including body language, questioning, language style, active listening and reflection
  - 3.2 Feedback is given assertively and received non-defensively during negotiations
  - 3.3 Shared understanding is created through written communications

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL4005A Apply conflict/grievance resolution strategies.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

## Assessment Requirements for TLIL4005 Apply conflict/grievance resolution strategies

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying interpersonal skills
- applying relevant legislation and workplace procedures
- communicating effectively with others when applying conflict and grievance resolution strategies
- completing relevant documentation
- gathering, recording and conveying simple and routine work-related information
- identifying existing and potential conflict or grievances
- interpreting and following operational instructions and prioritising work
- negotiating effectively with others when applying conflict and grievance resolution strategies
- participating in small informal work groups
- reading and interpreting relevant instructions, procedures, information and signs
- responding appropriately to cultural preferences in the workplace, including modes of behaviour and interactions with others
- selecting and appropriately applying technology, information systems and procedures to complete workplace tasks
- working collaboratively with others when applying conflict and grievance resolution strategies
- working systematically with required attention to detail.

### Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- options for constructive responses to typical conflict/grievance situations
- relevant regulation and code requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) policies and procedures
- relevant workplace business marketing policies and practices, including requirements for maintaining security and confidentiality
- signs, stages and possible causes of conflict in the workplace
- typical problems that can occur when applying conflict or grievance resolution strategies and related appropriate action that can be taken
- workplace protocols and procedures for identifying and resolving conflict or grievances.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIL4009 Manage personal work priorities and professional development

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to manage personal work priorities and personal professional development.

It includes managing personal performance, setting and meeting personal work priorities, and developing and maintaining personal professional competence.

Work is performed under minimum supervision with general guidance on progress and outcomes. It involves discretion and judgement in managing personal work priorities and professional development.

Work generally involves responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Manage self**

- 1.1 Action is taken to ensure personal qualities and performance serve as a role model in the workplace
- 1.2 Organisational plans and personal roles, responsibilities and accountabilities are reflected in personal goals and plans
- 1.3 Action is taken to achieve and extend personal goals beyond those planned
- 1.4 Consistent personal performance is maintained in varying work conditions and work contexts

**2 Set and meet own work priorities**

- 2.1 Competing demands are prioritised to achieve personal, team and organisational goals and objectives
- 2.2 Technology is used efficiently and effectively to manage work priorities and commitments

**3 Develop and maintain professional competence**

- 3.1 Personal knowledge and skills are assessed against competency standards to determine development needs and priorities
- 3.2 Feedback from clients and colleagues is used to identify and develop ways to maintain and build on current competence
- 3.3 Management development opportunities suitable to personal learning style/s are selected and used to develop competence
- 3.4 Professional networks and associations are participated in to enhance personal knowledge, skills and relationships
- 3.5 New skills are identified and developed to achieve and maintain a competitive edge

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL4009A Manage personal work priorities and professional development.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIL4009 Manage personal work priorities and professional development

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others when managing personal work priorities and professional development
- completing documentation related to managing personal work priorities and professional development
- interpreting and following operational instructions and prioritising work
- monitoring work activities in terms of planned schedule
- planning work activities, including predicting consequences and identifying improvements
- reading and interpreting instructions, procedures, information and signs relevant to managing personal work priorities and professional development
- selecting and appropriately applying technology, information systems and procedures to complete workplace tasks
- taking advantage of learning opportunities in the workplace, training programs and workshops
- working collaboratively with others when managing personal work priorities and professional development.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate learning methods to maintain current competence or to develop new competencies
- coaching and mentoring approaches to support team members to share and develop

knowledge and skills

- competencies required to increase participation in organisational planning and development
- relevant regulatory and code requirements
- resource availability including the competencies of individuals in the team/group
- typical problems that can occur when managing personal work priorities, and professional development and related action that can be taken
- workplace business policies and plans including procedures for undertaking professional development
- workplace protocols and procedures for managing personal work priorities and professional development.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIL4010 Assess and confirm customer transport requirements

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to assess and confirm customer freight transport requirements within the transport and logistics industry.

It includes assessing the goods/stock to be transported, determining the transit requirements and completing all required documentation.

Work involves discretion and judgement for self and others in assessing and confirming customer freight transport requirements and leadership of others individually or in teams. It is performed under minimum supervision with general guidance on progress and outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Assess goods/stock to be transported**
  - 1.1 Customer service parameters are followed in accordance with workplace procedures
  - 1.2 In consultation with customer, key characteristics of goods/stock to be transported are determined
  - 1.3 Regulatory and/or specific requirements for load shipment are identified
  - 1.4 Specific load handling characteristics/requirements are identified
  - 1.5 Task requirements are matched to workplace capability and operational focus
- 2 Determine transit requirements**
  - 2.1 Applicable transportation modes are matched to customer geographic location, load packaging characteristics, quantity of goods to be transported and specific requirements for goods
  - 2.2 Required pick-up and destination point/s are identified and assessed for safe access and operation
  - 2.3 Specified transit times and routes are identified and agreed with customer
  - 2.4 Transportation mode/s are determined with customer about load characteristics, transit requirements and cost effectiveness
  - 2.5 Risk assessment of transport service is undertaken in accordance with workplace policy and procedures
- 3 Complete documentation**
  - 3.1 Decisions for proceeding with task are undertaken or referred in accordance with workplace procedures and scope of authority
  - 3.2 Parameters of service requirements for the workplace and customer are documented
  - 3.3 Quotations for services/specifications are itemised and documented and processed in accordance with workplace procedures
  - 3.4 Legislative, insurance or specific conditions for load transport are recorded and filed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL4010A Assess and confirm customer transport requirements.

# Assessment Requirements for TLIL4010 Assess and confirm customer transport requirements

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others when assessing and confirming customer transport requirements
- completing all workplace processes related to transporting goods/stock
- completing relevant documentation
- interpreting and following operational instructions and prioritising work
- monitoring work activities in terms of planned schedule
- negotiating with others when assessing and confirming customer transport requirements
- operating and adapting to differences in equipment in accordance with standard operating procedures
- planning work activities, including predicting consequences and identifying improvements
- reading and interpreting relevant instructions, procedures, information and signs
- selecting and appropriately applying technology, information systems and procedures to complete workplace tasks
- working collaboratively with others when assessing and confirming customer transport requirements
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- customer service and quotation/specification systems and resources
- relevant regulatory and code requirements including mass and load regulations
- relevant work health safety (WHS)/occupational health and safety (OHS) and environmental protection policies and procedures
- strategies to implement continuous improvement processes
- typical problems that can occur when assessing and confirming customer transport requirements, and related appropriate action that can be taken
- workplace protocols and procedures for assessing and confirming customer transport requirements.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIL4032 Implement equal employment equity strategies

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to implement equal employment opportunity (EEO) strategies in accordance with regulatory and workplace requirements, as part of work activities in the transport and logistics industry.

It includes identifying and communicating agreed EEO direction, responding to EEO enquiries, implementing EEO strategies, contributing to policy development, and evaluating and reporting on the implementation of EEO strategies in the workplace.

While work is performed individually the ability to work within a team environment may be required.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify and communicate

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 EEO information and policy requirements are identified

- agreed employment direction** for the workplace
- 1.2 EEO information is disseminated to ensure relevant requirements are considered in decisions made within the workplace
  - 1.3 Advice is provided to assist with consistent interpretation of EEO information
  - 1.4 Negotiations are undertaken with management to ensure equity principles are incorporated throughout the workplace
  - 1.5 Interpretation and advice are provided on legislative requirements, workplace objectives and constraints, and human resource management practices
- 2 Respond to equal employment opportunity enquiries**
- 2.1 Arrangements are made to ensure EEO advice can be provided to personnel within necessary timeframes
  - 2.2 Enquiries are analysed to identify necessary information required to respond sufficiently
  - 2.3 Sources of information are identified and accessed to formulate response
  - 2.4 Responses are communicated clearly and appropriately and understanding of the response is checked
- 3 Implement strategies**
- 3.1 Strategies are developed to implement policies and objectives
  - 3.2 Measures are identified that reflect the success of strategies developed and suitable data collected
- 4 Contribute to policy development**
- 4.1 Consultation is regularly undertaken with stakeholders on policy development
  - 4.2 Advice is provided concerning the implications of EEO policy
- 5 Evaluate and report on policy implementation**
- 5.1 Data used to measure EEO policy performance is collected and statistically analysed
  - 5.2 Annual and other reports are produced on EEO policy performance
  - 5.3 Results of EEO strategies and performance are conveyed in a timely and appropriate way to relevant individuals and groups

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL4032A Implement equal employment equity strategies.

# Assessment Requirements for TLIL4032 Implement equal employment equity strategies

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating and working effectively with others when implementing equal employment opportunity (EEO) strategies
- completing relevant documentation
- counselling and negotiating with employees on EEO matters
- modifying activities depending on operational contingencies and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reporting and/or rectifying identified problems, in accordance with regulatory requirements and workplace procedures
- reading, interpreting and following relevant instructions, procedures, policies, conditions of employment, industrial agreements and awards
- applying relevant legislation and workplace procedures
- selecting and using relevant computer, communication and office equipment and programs
- working systematically with required attention to detail.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation and reporting requirements for implementing EEO strategies
- elements of workplace operations relevant to implementing EEO strategies, including
  - training and social justice policies and procedures
  - workplace organisational structure
  - workplace human resource policies and practices
  - job description and specifications
  - referral processes
  - workplace standards and delegations
  - quality management
  - work area business plans
  - industrial awards and enterprise agreements
- operational work systems, equipment, management and site operating systems for implementing EEO strategies
- problems that may occur when implementing EEO strategies and appropriate action that can be taken to resolve these problems
- relevant EEO regulations
- workplace procedures and policies for implementing EEO strategies.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIL4033 Promote effective workplace practice

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to promote effective workplace practice in accordance with regulatory and workplace requirements, as part of work activities undertaken in the transport and logistics industry.

It includes contributing positively to the work team environment, observing and promoting work safety procedures, maintaining and promoting the wellbeing of workplace team/s, and participating in competency development activities.

Work is performed individually but the ability to work within a team environment may be required.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Contribute positively to the work team environment**
  - 1.1 Workplace objectives are identified, interpreted and positively promoted to associated personnel and/or work team members
  - 1.2 Communication with associated personnel and/or work team members is effectively established
  - 1.3 Disputes are resolved through effective negotiation with relevant individuals or groups
  - 1.4 Quality assurance measures are maintained, systems improvement suggestions are encouraged, and proposals are submitted to relevant authorities
- 2 Observe and promote work safety procedures**
  - 2.1 Relevant statutory and workplace requirements for work health safety (WHS)/occupational health and safety (OHS) are communicated to all personnel and implemented at all worksites
  - 2.2 Accidents and injuries are reported and investigated in accordance with workplace policy
  - 2.3 Potential hazards and safety risks are identified, investigated and recommendations for preventative action are referred to appropriate authorities
  - 2.4 Training in WHS/OHS and First Aid are implemented
- 3 Maintain and promote team wellbeing**
  - 3.1 Prescribed medical and physical fitness criteria are promoted and maintained within the work environment
  - 3.2 Situations threatening safety arising from physical/psychological incompatibility with the work environment are identified and resolved
- 4 Participate in competency development**
  - 4.1 Competencies required by work team members are identified
  - 4.2 Suitable formal and informal competency development programs and approaches are identified
  - 4.3 Work team member skill gaps are determined and appropriate competency development programs and approaches are initiated to address these gaps
  - 4.4 Workplace trainer and assessor requirements are identified and team members are supported to take on these roles

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIL4033 Promote effective workplace practice

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying fatigue management knowledge and techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying principles of time management
- applying relevant legislation and workplace procedures
- communicating effectively with customers, associated personnel and all work team members when completing work activities
- completing relevant documentation
- coordinating the promotion of safe work practices, competency enhancement and work practice improvements throughout work groups
- counselling personnel on work related issues
- ensuring team members maintain the required level of physical fitness
- implementing contingency plans
- interpreting statistics related to workloads and quality assurance measures
- leading and coordinating the activities of multi-disciplinary work teams or specialist work groups
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures and workplace publications
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- settling disputes through face-to-face and group-based negotiation
- working systematically with required attention to detail without injury to self or others, or

damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- documentation and reporting workplace requirements
- elements of workplace operations relevant to effective work practice, including
  - workplace corporate plans, goals and objectives and industrial relations
  - communication and negotiation techniques and the benefits, advantages and disadvantages associated with them
  - group work practices and group dynamics; corporate customer service objectives
  - workplace procedures related to recording customer enquiries and actions
  - dispute settlement processes
  - workplace WHS/OHS and physical fitness requirements and related first-aid policies
  - competencies and skills required for workplace career path levels
- operational work systems, equipment, management and site operating systems
- problems that may occur during work activities and appropriate action that can be taken to resolve these problems
- relevant regulations and codes of practice
- relevant WHS/OHS and environmental protection procedures and guidelines
- workplace procedures and policies for promoting effective work practices.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIL4034 Arrange alternative passenger transport

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to arrange alternative passenger transport in accordance with workplace requirements.

It includes identifying and confirming transport requirements, arranging alternative transport, and monitoring and updating transport arrangements.

Work involves the application of regulatory requirements, codes of practice and workplace procedures when arranging alternative passenger transport, as part of workplace activities in the transport and logistics industries.

While work is performed individually, it will generally be undertaken within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the            Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

**1 Identify and confirm transport requirements**

1.1 Need for alternative passenger transport is identified with minimal actual disruption to services

1.2 Period for which alternative transport is required is determined from situation and services

1.3 Timetables, passenger loadings and luggage quantities are determined from workplace information systems

1.4 Requirements to cater for disabled passengers or others with specific needs are determined

1.5 Hazards are identified, risks are assessed and control measures are implemented

**2 Arrange alternative transport**

2.1 Type and number of transport units required are determined to provide cost effective movement within workplace guidelines for minimal disruption

2.2 Alternative transport is arranged within workplace policies and procedures to meet anticipated need

2.3 Arrangements are made to provide assistance for passengers with specific needs

2.4 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are identified and included in transport planning considerations

**3 Monitor and update transport arrangements**

3.1 Passengers are informed of alterations to services as quickly as possible

3.2 Relevant details of incidents are collected and recorded in accordance with workplace policies and procedures for future reference, analysis and investigation purposes

3.3 Irregularities outside own area of responsibility are referred to nominated person or section

3.4 Alternative transport arrangements and related financial transactions are documented to meet operational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL4034A Arrange alternative passenger transport.

## Links

# Assessment Requirements for TLIL4034 Arrange alternative passenger transport

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in transport situations in accordance with operating procedures
- analysing contingency situations for their impact on services
- applying relevant legislation and workplace procedures
- arranging alternative transport
- communicating and negotiating effectively with others
- completing relevant documentation
- identifying and confirming transport requirements
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and updating transport arrangements
- reporting and/or rectifying identified problems promptly, in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs
- scheduling and monitoring work activities
- working collaboratively with others when arranging alternative passenger transport
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria, and include knowledge of:

- alternative transport options to meet anticipated operational needs
- communication and negotiation requirements when arranging alternative passenger transport
- contact arrangements for other transport organisations available to provide alternative transportation
- documentation and record requirements
- problems that may occur when arranging alternative passenger transport and appropriate action that can be taken to resolve these problems
- protocols for contacting other transport organisations
- relevant services affected by contingency situations to be considered in transport planning arrangements to minimise actual disruption to services
- relevant work health and safety (WHS)/occupational health and safety (OHS) procedures and guidelines
- road transport service planning processes
- train timetables
- workplace procedures and policies for arranging alternative passenger transport.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate transport workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## TLIL4037 Apply and amend rosters

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to apply and amend rosters in accordance with regulatory and workplace requirements, as part of work activities in the transport and logistics industry.

It includes identifying changes to timetables, planned activities and support activities; confirming changes to planned activities and personnel availability; and re-allocating personnel and amending rosters.

Work is under minimal supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

L – Resource Management

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify changes to timetables, planned

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Changes to transport timetables are identified and their effect on operation and support areas is assessed

- |  |     |  |
|--|-----|--|
| <b>activities and support activities</b>         | 1.2 | New work requirements or revised set workings are identified and communicated to appropriate personnel   |
|  | 1.3 | Difficulties relating to new work requirements are resolved with central roster operations and appropriate work areas  |
|  | 1.4 | Difficulties in achieving changes to work outcomes are resolved with those initiating change, in accordance with workplace policies and procedures   |
| <b>2 Confirm changes to planned activities</b>   | 2.1 | Changes to planned services are identified and confirmed, and impact on support activities is assessed   |
|  | 2.2 | Support activities required to achieve amended service are assessed and necessary resources are identified and allocated   |
|  | 2.3 | Revised work outcomes or set workings are conveyed to relevant support work area/s for implementation  |
| <b>3 Confirm personnel availability</b>          | 3.1 | Amended rosters and work requirements are confirmed and distributed to appropriate work areas  |
|  | 3.2 | Personnel on amended rosters required to achieve new work outcomes are notified of changes   |
|  | 3.3 | Difficulties associated with compliance with amended roster/s or work outcomes are resolved within work area to the satisfaction of all involved, in accordance with workplace policies and procedures |
|  | 3.4 | Agreed work area changes to rostered work or amended work outcomes are communicated to central roster operations and appropriate personnel records area  |
| <b>4 Re-allocate personnel and amend rosters</b> | 4.1 | Agreed changes to rosters are confirmed with appropriate personnel   |
|  | 4.2 | Appropriate arrangements are made to implement amended rosters   |
|  | 4.3 | Personnel are re-allocated to achieve agreed work outcomes or amended set workings   |
|  | 4.4 | Final amendments to rosters are made to achieve agreed work outcomes or set workings   |
|  | 4.5 | Appropriate documents are updated to reflect changes made and ensure their recognition   |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL4037A Apply and amend rosters.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIL4037 Apply and amend rosters

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in roster requirements in accordance with standard operating procedures
- allocating suitably qualified personnel to tasks
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when applying and amending rosters
- completing relevant documentation
- identifying and confirming changes to activities
- implementing contingency plans
- interpreting conditions of employment and industrial agreements and awards
- interpreting set workings and combined set workings
- interpreting transport timetables and service details
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures and information and signs
- reporting and/or rectifying identified problems that may occur, in accordance with workplace procedures
- selecting and using relevant computer/communication/office equipment required when applying and amending rosters
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation and reporting requirements for amending rosters, including computer-based systems
- embarkation and disembarkation requirements
- equipment capacities and limitations
- operational work systems, equipment, management and site operating systems for applying and amending rosters
- passenger service needs
- personnel capabilities
- problems that may occur when amending rosters and appropriate action that can be taken to resolve these problems
- relevant organisational operations
- relevant regulations, safeworking systems and requirements, and codes of practice
- relevant WHS/OHS and environmental protection procedures and guidelines
- requirements for absentee coverage
- support activities
- transport services offered by the organisation
- workplace procedures and policies for applying and amending rosters.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIL4038 Organise marshalling and shunting operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to organise marshalling and shunting operations in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes identifying marshalling and shunting requirements, identifying required rolling stock movements, and planning rolling stock movements in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures when marshalling and shunting operations across a variety of operational workplace contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Identify marshalling and shunting requirements**

- 1.1 Track and siding requirements are established, based on customer needs and safe work practices
- 1.2 Dangerous goods or other special transportation requirements are established
- 1.3 Destinations, arrival times and departure times are established that are consistent with timetable requirements
- 1.4 Relevant safe working systems are identified
- 1.5 Hazards are identified, risks are assessed and control measures are implemented

### **2 Identify required rolling stock movements**

- 2.1 Rolling stock types required are determined from available documentation
- 2.2 Rolling stock locations are identified, and track and siding availabilities are established to facilitate the marshalling and shunting operation
- 2.3 Rolling stock priorities and sequences are sorted in accordance with workplace procedures

### **3 Plan rolling stock movements**

- 3.1 Marshalling strategy is identified to achieve safe and efficient loading and unloading
- 3.2 Resources required to carry out marshalling strategy are identified
- 3.3 Appropriate motive power is determined to enable completion of shunting operations
- 3.4 Track and siding access and options for wagon movements are identified from marshalling strategy
- 3.5 Contingency strategy is identified or prepared
- 3.6 Shunting and marshalling plan and train consist is documented, filed and distributed in accordance with operational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL4038A Organise marshalling and shunting operations.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIL4038 Organise marshalling and shunting operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in rolling stock and equipment in accordance with operating procedures
- applying relevant safeworking system and workplace procedures
- communicating effectively with others
- completing relevant documentation including:
  - shunting and marshalling plan
  - train consist
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying marshalling and shunting requirements
- identifying required rolling stock movements
- implementing contingency plans
- interpreting and follow operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- planning rolling stock movements
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- characteristics and features of wagons and other rolling stock
- draw gear capacities and related operating procedures
- loading and unloading facilities
- local track and signal layouts
- location of signals and points
- marshalling plan and instructions
- principles of operation of protective devices, air brakes, handbrakes and derailleurs
- procedures for:
  - coupling and uncoupling rolling stock
  - getting on and off rolling stock in an appropriate manner
  - loading and unloading rolling stock
  - managing hazardous situations
  - operating points and signals
- relevant Australian Dangerous Goods (ADG) Code and workplace procedures
- relevant documentation requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations and codes of practice
- safeworking systems and workplace procedure requirements
- timetables and destination information required when organising marshalling and shunting operations
- yard features and operation.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and

numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including safeworking systems, workplace procedures, regulations, ADG Code, codes of practice and operation manuals.

## **TLIL4050 Allocate rolling stock**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to allocate rolling stock in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes identifying train consists and passenger and/or freight requirements, establishing available rolling stock, allocating rolling stock to trains, and monitoring and amending rolling stock allocation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed individually and skills are required to work within a team environment. It involves the application of regulatory requirements and operational principles and procedures when allocating rolling stock as part of work activities across a variety of operational workplace contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

L – Resource Management

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Identify train consists and passenger and/or freight requirements**

1.1 Details of train consist and passenger numbers acquired from train planning are evaluated against available resources in accordance with workplace procedures

1.2 Train running times and train details are identified to confirm timings in accordance with workplace procedures

1.3 Initial estimate of required rolling stock by numbers and types for each rail service is made

### **2 Establish available rolling stock**

2.1 Passenger numbers and class of travel to be catered for with a passenger train are identified to ensure suitable carriages are provided

2.2 Types of freight train rolling stock required for the established freight loads and track dimensions are identified in accordance with workplace procedures

2.3 Passenger or freight train rolling stock locations are established using available tracking systems and procedures

2.4 Serviceability of the required rolling stock is confirmed using appropriate workplace procedures

2.5 Support rolling stock for passenger trains is located and assigned for each rail service

2.6 Rolling stock committed for rail service is recorded as being required for use prior to positioning for service/loading operations

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL4050A Allocate rolling stock.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIL4050 Allocate rolling stock

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- allocating rolling stock to trains
- applying relevant safeworking system and workplace procedures
- calculating load requirements in accordance with workplace procedures
- communicating effectively with others
- completing relevant documentation and entering data
- establishing available rolling stock
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying train consists and passenger and/or freight requirements
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- interpreting train movement graphs and diagrams
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and amending rolling stock allocation
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others when allocating rolling stock
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- allocation and maintenance schedules of rolling stock
- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- documentation and record requirements
- equipment and materials used when allocating rolling stock, and procedures that should be followed in their use
- load calculation and allocation requirements
- problems that may occur when allocating rolling stock and appropriate action that can be taken to resolve these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) procedures and regulations including codes of practice
- rolling stock and specifications, capabilities and capacity
- support rolling stock for passenger trains such as dining cars
- workplace procedures and policies for allocating rolling stock.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIL4059 Implement asset management systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to implement asset management systems in various contexts within the transport and logistics industry.

It includes determining management control processes; implementing existing practices, procedures and systems; and reviewing service levels.

The unit generally applies to those who lead individuals or teams and have responsibility for implementing and monitoring asset management systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Determine management control process**
  - 1.1 Roles and responsibilities of business units or departments are clarified to ensure effective management of assets in accordance with organisational policy and procedures
  - 1.2 Specific organisation reporting and monitoring standards are clarified as required and complied with
  - 1.3 Information systems that provide the information necessary for effective and efficient asset management for all levels within the organisation are maintained
  - 1.4 Regular audits are arranged, as required, to establish a continuous improvement cycle
- 2 Implement existing practices, procedures and systems**
  - 2.1 Assessments of current status of asset management activities within business units or departments are conducted regularly in accordance with asset management plan
  - 2.2 Work group/s are supported to adhere to milestones and targets
  - 2.3 Areas of difficulty are identified and strategies are followed to overcome identified difficulties
- 3 Review service levels**
  - 3.1 Current levels of service provided by asset stock are critically examined
  - 3.2 Areas of possible improvement in the effectiveness and efficiencies of owning and operating assets are identified in consultation with relevant personnel
  - 3.3 Appropriate benchmarking is undertaken to enable continuous improvement in asset management strategies and practices

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL4059A Implement asset management systems.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIL4059 Implement asset management systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- consulting and liaising, as required, when working with a team
- implementing, monitoring and reviewing management systems
- interpreting and following operational instructions and prioritising work
- managing a team and encouraging team participation
- operating electronic communications equipment to required protocol
- using critical analysis to determine the best approach to asset management for the organisation
- using lateral thinking to solve problems as they arise or to generate ideas.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- benchmarking practices
- characteristics of different types of information systems used to provide and assist in asset management
- code of practice for working collaboratively with others particularly with those involved in inputting data into asset management systems
- detail of different approaches to asset management, including theoretical knowledge
- organisational and industry functions
- procedures for identifying equipment defects and assessing for appropriate action

- procedures for operating electronic communications equipment
- quality management principles and procedures
- relevant sections of national and state/territory regulatory requirements and codes of practice
- requirements for completing relevant documentation including asset management reports.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# **TLIL4069 Plan and coordinate protection for multiple worksites within limits of a work on track authority**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to plan and coordinate worksite protection for multiple worksites within the limits of a Work On Track Authority.

It includes identifying protection requirements for multiple worksites, establishing protection of multiple worksites and removing protection arrangement for multiple work groups.

The track protection requirements may involve long-term planning and consultation with a number of stakeholders.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety but does not include the implementation of worksite protection.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

L – Resource Management

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Identify protection requirements for multiple worksites**

1.1 Nature and complexity of work to be performed within multiple worksites are identified

1.2 Hazards are identified, risks are assessed and control measures are implemented

1.3 Worksite safety plan is developed in accordance with rules and procedures

1.4 Personnel and other resources required to undertake protection activities are identified in accordance with worksite protection plan

### **2 Establish protection of multiple worksites**

2.1 Detailed information on protection arrangements is provided to appropriate personnel and issues raised are clarified and/or confirmed

2.2 Worksite protection plan is maintained to ensure protection is implemented correctly

2.3 Communication links with appropriate personnel are maintained

2.4 Rail movements through multiple work areas are coordinated

2.5 Establishment and removal of worksites is coordinated within Work on Track Authority limits

2.6 Worksite protection is deployed and removed in accordance with rules and procedures

2.7 Documentation is completed and maintained for worksite protection for the duration of the Work on Track Authority

### **3 Remove protection arrangements for multiple work groups**

3.1 Notification of completed works and assurance that track is safe for passage of rail traffic is received from all protection officers in accordance with workplace procedures

3.2 Protection arrangements are removed from each worksite in accordance with workplace procedures

3.3 Actions are documented in accordance with workplace

---

procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL4069A Plan and coordinate protection for multiple worksites within limits of a work on track authority.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIL4069 Plan and coordinate protection for multiple worksites within limits of a work on track authority

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing nature and complexity of a work program
- analysing track work activities for complexity
- applying relevant safeworking system and workplace procedures
- communicating effectively with individuals and work groups
- completing Work On Track Authority documentation
- developing a worksite protection plan for multiple worksites within limits of a work on track authority
- explaining plan to relevant stakeholders and appropriate personnel
- explaining variations to plan that may need to be negotiated
- following rail infrastructure manager workplace policies, procedures, rules and protocols
- fulfilling worksite permits
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying unsafe situations and emergencies
- managing a worksite protection plan with multiple worksites within limits of a work on track authority
- using appropriate personal protective equipment in accordance with Rail Infrastructure Manager requirements.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- operational communications protocols and systems

- Rail Infrastructure Manager policies, procedures and protocols for identified unsafe situations or emergencies
- Rail Infrastructure Manager rules and procedures
- Rail Infrastructure Manager rules and procedures for multiple worksites within limits of a work on track authority
- rail terminology as defined by the relevant Rail Infrastructure Manager system
- relevant rail danger zones
- track possession documentation
- track work authority
- types of track protection and safeworking systems
- worksite protection plans.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or simulations
  - relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
  - applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

## TLIL4073 Apply asset management system

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to apply asset management systems.

It includes identifying and classifying assets, recording assets and their condition, and maintaining an asset management system.

Work may be undertaken in various contexts within the transport and logistics industry. The unit generally applies to those who provide leadership of others individually or in teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

L – Resource Management

### Unit Sector

Not applicable.

### Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Identify designated area of responsibility

1.1 Designated area of responsibility is identified in accordance with organisational requirements

- 1.2 Contribution is made to maintaining asset register on the basis of current and ongoing needs, in accordance with organisational requirements
  - 1.3 Assets to be recorded in asset register are identified in accordance with organisational requirements
- 2 Record assets and their condition**
- 2.1 Specified details of material assets are identified and recorded in accordance with asset management policies and procedures
  - 2.2 Condition of each asset is determined and corrective maintenance tasks are recorded in accordance with manufacturer specifications, relevant Australian standards and organisational requirements
  - 2.3 Useful/residual life of each asset is determined as required, in accordance with manufacturer specifications and organisational requirements
- 3 Maintain asset management system records**
- 3.1 Records of asset management activities are updated in accordance with organisational requirements
  - 3.2 Periodic audits are conducted to ensure accuracy of asset register in accordance with organisational requirements
  - 3.3 Contribution is made to asset management system review to ensure it is supporting business needs, in accordance with organisational requirements
  - 3.4 Guidance is provided to support effective management and maintenance of asset register, in accordance with organisational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL4073A Apply asset management system.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIL4073 Apply asset management system

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying organisational asset management processes and procedures
- applying relevant workplace procedures
- completing relevant documentation
- determining condition of a range of assets
- modifying activities depending on operational contingencies, risk situations and environments.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- different types of asset management systems used within an organisation
- different types of rail assets applicable to own area
- organisational asset management policy, processes and procedures that address all phases of the asset life cycle of rail infrastructure or rolling stock operations
- organisation record management policies and procedures
- relevant sections of state/territory regulatory requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- requirements for completing relevant documentation.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIL4074 Control and coordinate rail traffic movement

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to control rail traffic movement in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes monitoring the status of the current train area plan, implementing the daily working timetable, controlling rail traffic movement, implementing contingency plans for planned events and system faults and failures, and updating traffic movement documentation in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Monitor status of current train plan**

- 1.1 Train movements and associated activities are analysed to establish current situation
- 1.2 Proposed train movements and associated activities are identified to establish status of train plan, in accordance with organisational procedures and policies
- 1.3 Train notices are checked for accuracy and adjustments are made as required
- 1.4 Operational management system information is reviewed against observed status and inconsistencies are corrected

### **2 Implement daily working timetable**

- 2.1 Train movements are prioritised and coordinated in accordance with organisational policies and procedures to ensure optimum and consistent running to schedules
- 2.2 Relevant information is communicated to internal and external customers
- 2.3 Planned and where applicable unplanned train movements and train notices are implemented in accordance with organisational policies and procedures

### **3 Control rail traffic movement**

- 3.1 Train movements are coordinated with other relevant personnel in accordance with organisational policies and procedures
- 3.2 Surveillance and alarm systems are monitored to identify emergency situations as required
- 3.3 Signalling systems are operated and monitored to ensure safe movement of rail traffic

### **4 Communicate with rail safety workers, stakeholders and customers**

- 4.1 Communication with relevant rail safety workers is undertaken to ensure they are informed of train movements, in accordance with organisational policies and procedures
- 4.2 Alternative methods of communication are identified and used in the case of normal communications system malfunction

- 4.3 Communication with relevant stakeholders and customers is undertaken to ensure they are informed of train movements, in accordance with organisational policies and procedures
- 5 Implement contingency plans**
- 5.1 Contingency plan to suit unplanned track works, disruption, system failure or fault is identified and implemented in accordance with organisational policies and procedures
- 5.2 Resources to respond to the contingency are arranged in accordance with relevant organisational policies and procedures
- 5.3 Required communications are established
- 5.4 Train plan or schedule is reviewed and adjusted in accordance with organisational requirements
- 5.5 Communication with internal and external customers is established and maintained as required
- 5.6 Operational management systems are updated to reflect changes resulting from the contingency
- 6 Update rail traffic movement documentation**
- 6.1 Rail traffic movement documentation is compiled and recorded in accordance with organisational policies and procedures
- 6.2 Rail traffic movement documentation is handed over when relieved and/or at the completion of shift in accordance with organisational policies and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL4074A Control and coordinate rail traffic movement.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIL4074 Control and coordinate rail traffic movement

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking systems and workplace procedures
- communicating effectively with others
- completing relevant documentation and entering data
- controlling rail traffic movement
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans for planned events and system faults and failures
- implementing the daily working timetable
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring the status of the current train area plan
- monitoring work activities in terms of planned schedule
- operating communications systems to required protocol
- reading, interpreting and following relevant instructions, procedures and information
- reporting and rectifying, within limits of own role, identified problems, faults and malfunctions, in accordance with organisational procedures
- updating traffic movement documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications systems
- emergency management procedures
- local area knowledge to coordinate rail traffic movement

- organisational procedures for controlling and coordinating train operations
- problems that may occur when controlling and coordinating rail traffic and related action that should be taken
- relevant documentation requirements
- relevant sections of applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- restrictions relating to loads and conditions
- safeworking systems and occupancy authorities
- signalling and control systems and operations
- surveillance and alarm systems.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

## **TLIL4075 Implement and amend daily train plan**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to control daily train operations in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes implementing daily train movements, monitoring and making amendments to the daily train plan as required, and maintaining required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work involves the application of routine operational principles and procedures when planning and implementing daily train operations across a variety of operational workplace contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

L – Resource Management

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

# Assessment Requirements for TLIL4075 Implement and amend daily train plan

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking systems and workplace procedures
- communicating with others when developing and implementing daily train plans
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing daily train movements
- maintaining required documentation
- monitoring and making amendments to the daily train plan
- reading and interpreting relevant instructions, procedures, and information
- using appropriate numeric functions when amending daily train plan
- working collaboratively with others when implementing and amending daily train plans
- working systematically with required attention to detail.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- familiarity with yards, depots and, where applicable, station workings
- organisational procedures for planning and controlling train operations
- restrictions relating to loads and conditions
- safeworking and signalling system requirements, where applicable
- system geography and limitations
- timetabling and train planning protocols
- train control diagrams and graphing.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

## TLIL4076 Coordinate resources

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to determine, acquire and allocate resources and deal with contingencies, in accordance with organisational requirements.

It includes establishing resource requirements, acquiring and allocating resources, dealing with contingencies, measuring effectiveness of resource coordination and document control.

This unit applies to individuals who require a broad knowledge of business resources to ensure adequate resources are available to perform the work of the organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

L – Resource Management

### Unit Sector

Not applicable.

### Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Establish resource requirements**
  - 1.1 Resource requirements are determined in accordance with business and operational plans, and organisational requirements
  - 1.2 Opportunities are provided to individuals and work groups to contribute to identifying resource requirements
  - 1.3 Processes are followed that ensure resource expenditure is realistic and makes efficient use of available resources in accordance with organisational procedures
  - 1.4 Recommendations for resource requirements are presented to appropriate personnel in accordance with organisational procedures
- 2 Acquire and allocate resources**
  - 2.1 Resources are acquired in accordance with organisational requirements
  - 2.2 Resources are checked to ensure quality and quantity in accordance with organisational requirements
  - 2.3 Resources are allocated to enable achievement of work group objectives
  - 2.4 Individuals and teams are consulted about resource allocation in a participative manner using appropriate interpersonal skills
- 3 Deal with contingencies**
  - 3.1 Actions are taken to manage identified shortfalls and/or surpluses
  - 3.2 Appropriate actions to manage non-conforming resources are implemented in accordance with organisational procedures
  - 3.3 Activities are reviewed against timelines and adjusted where appropriate to ensure timely completion of activities
  - 3.4 Time extensions or reductions are implemented as required, in accordance with organisational procedures
- 4 Measure resource availability**
  - 4.1 Effectiveness of resource coordination activities is measured against actual delivery
  - 4.2 Records concerning resource coordination activities are maintained in accordance with organisational requirements
- 5 Maintain document control**
  - 5.1 Document procedures are confirmed

5.2 Systems to support document control are monitored and reviewed as required

5.3 Staff are supported to maintain document control systems

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL4076A Coordinate resources.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIL4076 Coordinate resources

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- acquiring and allocating resources
- communicating and consulting effectively with team members
- dealing with contingencies
- establishing resource requirements
- measuring effectiveness of resource coordination
- maintaining document control systems
- scheduling and tracking resource use and availability
- using appropriate strategies when requesting advice, receiving feedback and working with a team.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- functions of resources, equipment and services
- organisational policies, plans and procedures for resource coordination
- quality procedures for organisational resource and service requirements
- relevant workplace procedures
- relevant document control processes and systems.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of

assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

# TLIL4077 Develop out-of-course rail traffic plans and schedules

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to develop out-of-course rail traffic plans and schedules in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes analysing service and/or business requirements, establishing rail traffic requirements, and communicating altered or additional rail traffic movement requirements.

Work is performed under some supervision, generally in a team environment.

This unit is intended for persons who are required to develop out-of-course rail traffic plans and schedules as part of work activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Analyse service and business requirements**

- 1.1 Customer is consulted and requirements outside normal operations are identified to establish additional or altered rail service requirements
- 1.2 Additional or altered rail service provision is recorded in accordance with organisational procedures
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Additional resource requirements are identified

### **2 Establish rail traffic requirements**

- 2.1 Rail traffic requirement is established to ensure efficient management of the network
- 2.2 Rail traffic specifications are confirmed to ensure that they meet network operating requirements and restrictions
- 2.3 Train section run times for rail traffic are established and plotted on appropriate train graphs and/or diagrams

### **3 Communicate altered or additional rail traffic movement**

- 3.1 Documentation relating to additional or altered rail traffic movement is issued in accordance with organisational procedures
- 3.2 Alterations and cancellations affecting rail traffic running times are communicated to appropriate customer, network manager and/or rail operator as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the

work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIL4077A Develop out-of-course rail traffic plans and schedules.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIL4077 Develop out-of-course rail traffic plans and schedules

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing service and/or operational requirements
- applying relevant safeworking systems and workplace procedures
- communicating altered or additional rail traffic movement requirements
- communicating and negotiating effectively with customers and others
- completing relevant documentation and entering data
- developing an out-of-course rail traffic plans and schedule
- establishing rail traffic requirements
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- interpreting train control graphs and diagrams
- reading and interpreting relevant instructions, procedures and information
- rectifying issues or problems that may occur promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines for developing out-of-course rail traffic plans and schedules
- details of approved rail traffic on the network
- issues or problems that can occur when developing rail traffic plans and schedules and how they may be addressed

- rail traffic services provided by the organisation
- relevant documentation requirements and procedures
- relevant network interface agreements
- safeworking systems requirements
- timetable principles
- workplace procedures for developing rail traffic plans and schedules.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIL4081 Ensure competency of rail safety workers

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to ensure the competency of rail safety workers.

It includes identifying, implementing and monitoring requirements for managing the competency of rail safety workers.

Work must be carried out in compliance with rail industry standards, rules, regulations and organisational procedures.

The unit generally applies to those with responsibility for resource coordination and allocation, and for leading others individually or in teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Confirm re/certification requirements for rail safety workers**
  - 1.1 Rail safety worker activities/tasks being undertaken within an organisation are identified
  - 1.2 Task analysis is conducted in accordance with organisational policies and procedures
  - 1.3 Safety task analysis is conducted to identify the skills and knowledge required to carry out rail safety work
  - 1.4 Existing competency standards are identified and validated against rail safety work to be carried out
  - 1.5 Where no competency standards currently exist, methods by which they can be developed or alternative methods for determining competency are identified
  
- 2 Implement, manage and monitor rail safety worker systems**
  - 2.1 Competency training and assessment plans are identified, developed and/or implemented for all activities being carried out by rail safety workers
  - 2.2 Appropriate training and assessment providers are identified and delivery plans are developed to meet organisational and regulatory requirements
  - 2.3 Rail safety worker register is developed and maintained in accordance with regulatory requirements
  - 2.4 Training and assessment records are captured and maintained in accordance with regulatory and organisational requirements
  - 2.5 Individual rail safety worker identification system is developed and/or implemented in accordance with regulatory and organisational requirements
  - 2.6 Rail safety worker information system is monitored and amended as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL4081A Ensure competency of rail safety workers.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIL4081 Ensure competency of rail safety workers

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in relevant legislation and regulations
- applying relevant legislation and workplace procedures
- communicating effectively with others
- developing a system to manage rail safety worker competency
- facilitating systems that assist employees to identify their own rail safety worker competency learning and assessment needs
- identifying rail safety workers within a rail organisation
- monitoring activities and taking appropriate action to manage implementing organisation's rail safety worker competency system
- organising, monitoring and reviewing organisation's rail safety worker competency system
- reading and interpreting relevant documentation
- recognising breaches to rail safety worker competency requirements and taking appropriate action, in accordance with organisation's rail safety worker competency system
- reviewing a rail safety worker competency system
- working collaboratively with employees and management.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable training and assessment regulatory requirements
- Australian Qualifications Framework
- components of a rail safety worker competency system
- procedures and tools for monitoring and reviewing organisation's rail safety worker competency system and related policy and procedures, and for reporting outcomes
- processes and resources for assessing employee competence
- relevant legislation, regulations, permit and licence requirements related to rail safety worker competency
- relevant sections of the *Standards for Registered Training Organisations*
- responsibilities of rail transport operators and employees for implementing rail safety worker competency regulations and policies, including requirements of suppliers and sub-contractors in organisation's services and products supply chain
- sources of information on rail safety worker competence
- task analysis methodologies for rail safety worker competence.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIL4082 Coordinate rail interface agreements

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to coordinate rail interface agreements in accordance with legislative, regulatory and organisational requirements.

It includes identifying requirements and establishing, monitoring and conducting audits of rail interface agreements.

This unit refers to coordinating rail interface agreements between rail/rail (operations of one rail operator or Rail Infrastructure Manager in relation to the operations of another) and rail/road (roads crossing rail tracks or rail crossing roads).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Confirm regulatory and organisational requirements and responsibilities**

- 1.1 Regulatory and organisational requirements for establishing rail interface agreements and their ongoing monitoring are identified and accessed
- 1.2 Types of interfaces for which agreements are to be established and/or monitored are identified and confirmed as requiring an interface agreement, in accordance with regulatory and organisational requirements
- 1.3 Organisational responsibilities for establishing rail interface agreements and their ongoing monitoring are identified
- 1.4 Parties to be included in each rail interface agreement are identified and confirmed
- 1.5 Communications are established with identified parties and regulators, and respective roles and responsibilities are established and agreed

**2 Establish and monitor rail interface agreements**

- 2.1 Documentation to be implemented as part of the rail interface agreement is identified and accessed
- 2.2 Risk assessments are carried out to identify potential risks arising from the rail interface
- 2.3 Measures to manage identified risks and timeframes for implementation are established in accordance with regulatory requirements, and organisational policies and procedures
- 2.4 Approval of rail interface agreement is sought from all parties involved, in accordance with regulatory requirements, and organisational policies and procedures
- 2.5 Rail interface agreement is implemented and monitored in accordance with regulatory requirements, and organisational policies and procedures
- 2.6 Register of all rail interface agreements is established and maintained in accordance with regulatory requirements, and organisational policies and procedures
- 2.7 Relevant parties requiring access to rail interface agreements register are identified and access is provided in accordance with regulatory requirements, and organisational policies and procedures

### **3 Conduct rail interface agreement audits**

- 3.1 Periodic rail interface agreement audits are conducted in accordance with regulatory requirements and organisational policies
- 3.2 Identified non-compliance and/or variations to rail interface agreement are identified and communicated to appropriate parties for resolution
- 3.3 Audit reports are compiled and transmitted to appropriate parties

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIL4082A Coordinate rail interface agreements.

## **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIL4082 Coordinate rail interface agreements

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others
- conducting audits of an organisation's rail interface agreements
- developing rail interface agreement documentation
- identifying an organisation's rail interface agreement requirements
- negotiating effectively
- reading and interpreting rail interface agreement legislation documentation
- reviewing a rail interface agreement
- working collaboratively with employees and management.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- components of a rail interface system
- procedures for auditing an organisation's rail interface agreements and reporting audit outcomes
- relevant legislation and regulations relating to rail interfaces
- responsibilities of an organisation and employees for implementing rail interface agreements.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## **TLIL4083 Assist with train operations**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to assist with train operations as a driver assistant or second-person, in accordance with organisational procedures, safeworking system and codes of practice.

It includes assisting with train preparations and train operation when loading/unloading, taking charge of or handing over, and/or stabling a train.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

L – Resource Management

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

Elements describe the Performance criteria describe the performance needed to demonstrate

- essential outcomes. achievement of the element.
- 1 Assist with preparing for train operation and train handover**
- 1.1 Documentation/information is obtained and interpreted to confirm consist information and constraints or characteristics of load, in accordance with organisational policies and procedures
  - 1.2 Visual inspection of equipment is carried out and identified faults or defects are appropriately reported in accordance with manufacturer specifications, and organisational policies and procedures
  - 1.3 Hazards are identified, risks are assessed and risk control measures are implemented
  - 1.4 Assistance is provided with pre-operational checking and testing of equipment, in accordance with organisational policies and procedures
- 2 Assist with train operation in transit**
- 2.1 Motive power unit is monitored in conjunction with driver, in accordance with organisational policies and procedures
  - 2.2 Guidance is provided to driver while stopping and starting to ensure safety of personnel and equipment
  - 2.3 Train running is monitored and recorded to assist with on-time running in accordance with organisational policies and procedures
  - 2.4 Performance of equipment and rolling stock is monitored to identify faults or defects and appropriate action is taken in accordance with organisational policies and procedures
  - 2.5 Security of load is monitored and identified abnormalities are dealt with in accordance with organisational policies and procedures
  - 2.6 Signals and track/road are monitored and confirmed in accordance with organisational policies and procedures
- 3 Assist with handing over or stabling train**
- 3.1 Appropriate assistance is provided when stabling train in accordance with safeworking system requirements, operational instructions and organisational policies and procedures
  - 3.2 Safety devices are activated or put in position in accordance with organisational policies and procedures
  - 3.3 During handing over or stabling train, documentation relevant to train and activities undertaken in transit is updated and provided to relief crew or is completed and forwarded to appropriate personnel in accordance with organisational policies and

procedures

- 3.4 Relevant housekeeping activities are completed prior to handover/stabling in accordance with organisational policies and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL4083A Assist with train operations.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIL4083 Assist with train operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assisting with train preparations and train operations when:
  - loading and/or unloading
  - taking charge of or handing over and/or stabling a train
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures and information
- selecting and using relevant equipment and materials
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- appropriate motive power unit and rolling stock systems

- emergency procedures and emergency response plan
- how to compile and confirm required documentation
- problems that can occur when assisting with train operations and action that should be taken
- procedures for fixed and hand signalling, and communications protocols
- relevant environmental protection legislation, regulations, codes of practice, policies and procedures
- safeworking systems and requirements
- stabling workplace procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIL4084 Control daily tram/light rail operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to monitor and control daily tram/light rail operations in accordance with organisational procedures, regulatory requirements and codes of practice.

It includes monitoring tram/light rail operations, dealing with disruptions or delays and completing documentation.

Work involves the application of routine operational principles and procedures when monitoring and controlling daily tram/light rail operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Monitor tram/light rail operations**
  - 1.1 Matters for attention book, daily notices and any other documentation are checked for possible impact on daily tram/light rail operations
  - 1.2 Hazards are identified, risks are assessed and control measures are implemented
  - 1.3 Current status of tram/light rail operations and tactical situations are identified in accordance with organisational procedures
  - 1.4 Any problems or delays are identified and current situation is noted in accordance with organisational procedures
  - 1.5 Communication with appropriate personnel is established and/or maintained in accordance with organisational procedures
- 2 Deal with disruptions and delays to tram/light rail services**
  - 2.1 Disruptions, delays or potential delays are identified through notices or information from appropriate personnel or authorities
  - 2.2 Contingency plans are developed and implemented in accordance with organisational procedures
  - 2.3 Tram/light rail service is adjusted to meet operational and customer service requirements
  - 2.4 Availability of resources to implement contingency plan is confirmed with appropriate personnel and resources are allocated in accordance with organisational requirements
  - 2.5 Where non-routine delays occur, advice is disseminated in accordance with organisational requirements
- 3 Complete documentation**
  - 3.1 Out of course delays and disruptions are documented in accordance with organisational procedures
  - 3.2 Completed documentation is filed and stored in accordance with organisational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL4084A Control daily tram/light rail operations.

# Assessment Requirements for TLIL4084 Control daily tram/light rail operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking systems and workplace procedures
- communicating effectively with others when monitoring and controlling tram/light rail operations
- controlling daily tram/light rail operations
- dealing with disruptions or delays to tram/light rail operations
- following documentation procedures in accordance with organisational standards
- identifying job hazards and required action to minimise, control or eliminate identified hazards
- identifying relevant organisational documentation
- monitoring tram/light rail operations
- producing clear and concise documentation
- reading and interpreting relevant instructions, procedures, and information
- working collaboratively with others when monitoring and controlling tram/light rail operations
- working systematically with required attention to detail.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communication protocols for relevant personnel and authorities
- location of tram/light rail and heavy rail interfaces
- organisational procedures for monitoring and controlling tram/light rail operations
- problems and delays that may occur with daily tram/light rail operations
- regulatory requirements

- safeworking systems and relevant workplace procedures for controlling daily tram/light rail operations
- system geography and limitations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIL4085 Coordinate tram/light rail traffic movement

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to coordinate tram/light rail traffic movement in accordance with organisational procedures, regulatory requirements and codes of practice.

It includes monitoring the status of and implementing the daily timetable; controlling tram/light rail traffic movements; implementing contingency plans for system faults, failures and planned events; and updating traffic movement documentation in accordance with organisational requirements.

This unit involves the application of operational principles, regulations, protocols and procedures when controlling tram/light rail traffic movement as part of workplace activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the                      Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

**1 Monitor status of daily timetable**

1.1 Tram/light rail movements and associated activities are analysed to establish current situation

1.2 Out of course tram/light rail movements, special events, planned reconstruction work and associated activities are identified to establish their effect on the status of the daily timetable

1.3 Notices are checked and adjustments are made as required

**2 Implement daily timetable**

2.1 Tram/light rail movements are coordinated to ensure optimum and consistent running to schedules in accordance with organisational policies and procedures

2.2 Relevant information is communicated to internal and external customers

2.3 Planned and unplanned tram/light rail movements are implemented in accordance with organisational policies and procedures

**3 Control tram and light rail traffic movement**

3.1 Tram/light rail movements are coordinated in consultation with other relevant personnel in accordance with organisational policies and procedures

3.2 Operational tactical situations are monitored to ensure adherence of tram/light rail traffic to daily timetable

3.3 Alarm systems are monitored and responded to as required in accordance with organisational policies and procedures

**4 Communicate with track/emergency/ rail safety workers**

4.1 Communication with relevant track/emergency/rail safety workers is undertaken to ensure they are informed of tram/light rail movements, in accordance with organisational policies and procedures

4.2 Alternative communications methods are identified and used when regular communications system malfunctions

**5 Implement contingency plans**

5.1 Contingency plan to suit unplanned track works, disruptions, system failure or fault is identified and actioned in accordance with organisational policies and procedures

5.2 Resources to respond to the contingency are arranged in accordance with relevant organisational policies and

procedures

- 5.3 Required communications are established
- 5.4 Tram/light rail service is adjusted in accordance with organisational requirements
- 5.5 Communications with internal and external customers are established and maintained as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL4085A Coordinate tram/light rail traffic movement

## Links

# Assessment Requirements for TLIL4085 Coordinate tram/light rail traffic movement

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking systems and workplace procedures
- arranging resources to deal with a contingency
- communicating effectively with others
- controlling tram/light rail traffic movements
- identifying alternative communications systems for unplanned events
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans for system faults, failures and planned events
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring the status of and implementing the daily timetable
- operating communications systems to required protocol
- reading, interpreting and following relevant instructions, procedures and information
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- updating relevant traffic movement documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- alarm systems and their application
- available communications systems
- organisational procedures for controlling and coordinating tram/light rail operations
- problems that may occur when controlling rail traffic and related action that should be

taken

- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- relevant sections of applicable state/territory legislated rail safety requirements, codes of practice and/or guidelines
- relevant stakeholders/customers
- relevant safeworking system and workplace procedures for coordinating tram/light rail traffic movements
- tram/light rail network.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the tram/light rail workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIL5019 Implement and monitor transport logistics

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to implement and monitor transport logistics in accordance with relevant regulatory requirements, standards and codes of practice, including the Australian Dangerous Goods (ADG) Code and workplace procedures.

It includes mobilising resources, coordinating multi-modal transport activities, monitoring consignment/s and implementing a contingency management strategy.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

The unit generally applies to those with responsibility for resource coordination and allocation, who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Mobilise resources**
  - 1.1 Optimal resource level is acquired to meet operational schedule requirements
  - 1.2 Relevant regulatory and insurance requirements are determined and implemented
  - 1.3 Allocated resources are assessed and monitored to ensure operational effectiveness and efficiency
  - 1.4 Changes to resource allocation are undertaken where deficiencies or over-supply are apparent, in accordance with enterprise procedures
- 2 Coordinate multi-modal transport activities**
  - 2.1 Facilities, personnel and equipment are made ready to accommodate interchange functions
  - 2.2 Security arrangements are invoked as required
  - 2.3 Loading and unloading operations are conducted in accordance with operational schedule and applicable statutory requirements, codes of practice and enterprise procedures
  - 2.4 Relevant documentation is completed/updated in accordance with operational schedule and reporting requirements
- 3 Monitor consignment tracking**
  - 3.1 Consignment tracking systems are monitored against workplace quality standards
  - 3.2 Variations from workplace quality standards are identified and appropriate action is initiated to rectify identified problems or to institute required improvements
- 4 Implement contingency management strategy**
  - 4.1 Operational schedule is continually reviewed in taking into account information updates, reports and feedback
  - 4.2 Nature, extent and impact of issues or incidents are identified and assessed against contingency management strategy
  - 4.3 Relevant information is processed to establish priorities and responses for dealing with issues or incidents
  - 4.4 Operations are redirected and controlled to meet changes in transport environment and tasks, in accordance with enterprise procedures
  - 4.5 Liaison is initiated and maintained with organisations/individuals affected by changed operational schedules

4.6 Actions undertaken are clearly documented and filed

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIL5019A Implement and monitor transport logistics.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIL5019 Implement and monitor transport logistics

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating effectively with others when implementing and monitoring transport logistics
- completing documentation related to implementing and monitoring transport logistics
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communication equipment to required protocol
- prioritising work and coordinating self and others in relation to transport logistics activities
- providing leadership and working collaboratively with others
- reading and interpreting transport schedules, regulatory requirements, customer instructions, workplace procedures and manuals relevant to implementing and monitoring transport logistics
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and applying appropriate application of technology, information systems and procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of current competencies within functional activity
- application of relevant Australian standards and associated certification requirements
- business policies, procedures and plans including procedures for outsourcing components of operations and engaging additional resources
- code, regulatory, permit and licence requirements relevant to transport logistics
- operational transport logistics systems, resources, management and workplace operating systems
- problems that may occur when implementing and monitoring transport logistics and action that can be taken to resolve or report these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and regulations
- relevant regulations, codes of practice and legislative requirements including local and international regulations relevant to transport logistics
- relevant workplace documentation procedures
- resource availability including the competencies of individuals in the team/group
- risks and hazards related to implementing and monitoring transport logistics and ways of controlling the risks involved
- transport and equipment applications, capacities, configurations, safety hazards and control mechanisms
- workplace policies and procedures, including those covering issue resolution and grievance
- workplace procedures for implementing and monitoring transport logistics.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# **TLIL5020 Develop and maintain operational procedures for transport and logistics enterprises**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to develop and maintain operational procedures for transport and logistics enterprises in accordance with relevant regulations, standards and codes of practice, including the Australian Dangerous Goods (ADG) Code and workplace procedures.

It includes planning and developing operational procedures, and monitoring and evaluating the implementation of these operational procedure/s.

Work is under general guidance on progress and outcomes. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

The unit generally applies to those with responsibility for resource coordination and allocation, and who lead individuals and teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

L – Resource Management

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan and develop operational procedures**

#### **2 Monitor the implementation of the operational procedure/s**

#### **3 Evaluate the**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Processes requiring development/modification of operational procedures are identified and confirmed with relevant personnel and business units
- 1.2 Scope, focus and extent of the operational procedure/s are discussed and validated with affected personnel
- 1.3 Current procedures are evaluated to ensure development is not unnecessarily duplicating previous work
- 1.4 Factors likely to impact on the development process are identified and techniques are adopted for their incorporation into the procedure/s
- 1.5 Proposed operational procedures are researched using a range of sources and provision is made to include user input
- 1.6 Operational procedures are developed, documented and verified with relevant internal/external personnel and/or organisations, in accordance with workplace procedures
- 1.7 New operational procedures are trialled with a target group as required
- 1.8 Performance indicators are developed to measure the effectiveness of the operational procedure/s
- 2.1 Introduction of the operational procedure/s for selected units/job functions is planned with affected personnel to ensure understanding and the need for compliance
- 2.2 Effective induction and supervision is provided to support personnel in implementing the new procedure/s
- 2.3 Personnel performance is monitored to ensure adherence to the operational procedure/s and to assess the requirement to modify the process
- 2.4 Solicited feedback is actively sought from personnel implementing the operational procedure/s
- 3.1 Effectiveness of the operational procedure/s is assessed

### **implementation of operational procedures**

- against developed performance indicators
- 3.2 Operational procedure/s are modified/deleted as required, in accordance with evaluation mechanism and enterprise requirements
  - 3.3 Relevant personnel are kept informed of the evaluation process and advised of subsequent changes to operational procedure/s
  - 3.4 Records, reports and recommendations for improvement are managed within the workplace information systems and processes

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIL5020A Develop and maintain operational procedures for transport and logistics enterprises.

## **Links**

# Assessment Requirements for TLIL5020 Develop and maintain operational procedures for transport and logistics enterprises

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating effectively with others when developing and maintaining operational procedures for transport and logistics enterprises
- completing documentation related to developing and maintaining operational procedures for transport and logistics enterprises
- implementing contingency plans
- modifying activities to cater for variations in workplace contexts and environment
- monitoring work activities in terms of planned schedule
- operating electronic communication equipment to required protocol
- planning and organising activities
- prioritising work and coordinating self and others in relation to transport and logistics operations
- providing leadership and working collaboratively with others when developing and maintaining operational procedures for transport and logistics enterprises
- reading and interpreting transport and logistics schedules, inventories, regulatory requirements, customer instructions, workplace procedures and manuals relevant to developing and maintaining operational procedures for transport and logistics enterprises
- selecting and applying appropriate application of technology, information systems and procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of current competencies within functional activity
- application of relevant Australian standards and associated certification requirements
- business policies, procedures and plans including procedures for outsourcing components of operations and engaging additional resources
- focus of operation of transport and logistics systems, resources, management and workplace operating systems
- licence and permit requirements relevant to transport and logistics operations
- problems that may occur when developing and maintaining operational procedures for transport and logistics enterprises and action that can be taken to resolve or report these problems
- regulations, codes of practice and legislative requirements including local and international regulations relevant to transport and logistics operations and the Australian Dangerous Goods (ADG) Code where applicable
- resource availability including the competencies of individuals in the team/group
- risks and hazards related to developing and maintaining operational procedures and ways of controlling the risks involved
- transport and equipment applications, capacities, configurations, safety hazards and control mechanisms
- workplace policies and procedures, including those covering issue resolution and grievance
- workplace procedures for developing and maintaining operational procedures for transport and logistics enterprises.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

## TLIL5026 Manage export logistics

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to manage export logistics in accordance with relevant regulatory requirements, workplace procedures, standards and codes of practice, including Australian and International Dangerous Goods Codes.

It includes planning efficient export logistics operations, developing appropriate contingency management strategies, producing operation schedules as well as monitoring and coordinating systems for export logistics.

Work is under general guidance on progress and outcomes. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

The unit generally applies to those with responsibility for resource coordination and allocation, who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

L – Resource Management

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

#### PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
<b>1 Plan efficient export logistics</b>	<p>1.1 Australian and international codes and regulations, and workplace policies for export logistics are identified</p> <p>1.2 Consignment loads are evaluated in terms of critical parameters and customer instructions</p> <p>1.3 Capacity and capability of different local and overseas transport modes available to the organisation are assessed against proposed logistics tasks</p> <p>1.4 Preliminary schedules are matched against operational capacity and capability of available transport systems, equipment and staff</p> <p>1.5 Export logistics are planned for efficient and effective delivery and load handling in accordance with relevant regulatory and workplace procedures, taking into account key requirements</p> <p>1.6 Strategies to address identified deficiencies in operational capability and availability are undertaken in accordance with workplace procedures</p>
<b>2 Develop contingency management strategy</b>	<p>2.1 Quality standards and procedures for export logistics processes are confirmed and/or updated in accordance with workplace procedures</p> <p>2.2 Nature, extent and impact of potential issues or incidents in the planned export logistics are assessed</p> <p>2.3 Contingency management strategies for identified issues/incidents are established and evaluated including reference to previous similar scenarios</p> <p>2.4 Implementation procedures, including resource and infrastructure support, are documented and continually upgraded in regard to established quality standards and any changes in the Australian and the international operating environments</p>
<b>3 Produce operation schedules for export logistics</b>	<p>3.1 Local and overseas transportation modes, times and routes are established to maximise effective and efficient operations</p> <p>3.2 Resources are arranged in association with relevant Australian and overseas personnel to meet operational schedules</p>

- 3.3 Australian and international regulatory requirements, codes of practice and workplace procedures are identified and accounted for in operational schedule
  - 3.4 Tracking procedures are applied to consignment/s using relevant technology and systems in accordance with workplace procedures
  - 3.5 Schedule is consolidated and forwarded to appropriate personnel
  - 3.6 Schedule is stored in accordance with workplace procedures
- 4 Monitor and coordinate systems for export logistics**
- 4.1 Export logistics are monitored against identified quality standards, planned processes, and compliance with Australian and international regulatory requirements
  - 4.2 Non-compliance with quality standards, planned processes or regulatory requirements is identified and appropriate action is initiated to report and rectify identified problems
  - 4.3 Customer satisfaction with export logistics operations is monitored using appropriate methods
  - 4.4 Customer concerns and suggestions for service improvements are acted upon in accordance with workplace procedures
  - 4.5 Reports and other required documentation related to export logistics are completed and referred to relevant personnel in accordance with workplace procedures
  - 4.6 Changes in Australian and international regulations and codes of practice relevant to export logistics are monitored, identified and appropriate action is initiated to ensure ongoing compliance of export logistics processes and systems

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL5026A Manage export logistics.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIL5026 Manage export logistics

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in systems and equipment in accordance with standard operating procedures
- applying relevant legislation and workplace procedures
- communicating effectively with others when planning and managing export logistics
- completing documentation related to planning and managing export logistics
- developing, implementing and monitoring export logistics operations
- implementing contingency plans
- modifying activities to cater for variations in workplace contexts and environment
- monitoring work activities in terms of planned schedule
- prioritising work and coordinating self and others in relation to export logistics activities
- providing leadership and working collaboratively with others when planning and managing export logistics
- reading and interpreting instructions, procedures, information and signs relevant to planning and managing export logistics
- selecting and applying appropriate application of technology, information and communications systems and procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of relevant Australian and international standards and associated certification requirements
- Australian and international regulatory, permit and licence requirements relevant to export logistics
- business policies, procedures and plans including those covering outsourcing components of operations and engaging additional resources
- local and overseas transport and equipment applications, capacities, configurations, safety hazards and control mechanisms
- operational export logistics systems, resources, management and workplace operating systems
- problems that may occur when planning and managing export logistics and action that can be taken to resolve or report these problems
- resource availability including the competencies of individuals in the team/group
- workplace documentation procedures relevant to export logistics
- workplace policies and procedures, including those covering issue resolution and grievance
- workplace procedures for planning and managing export logistics.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

## TLIL5055 Manage a supply chain

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to manage a supply chain within various contexts in the transport and logistics industry. It covers the relationships between an organisation and its supply and demand partners along the chain.

It includes implementing a demand-driven supply chain management strategy, managing the supply chain, and evaluating and improving supply chain effectiveness.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

L – Resource Management

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Implement demand-driven supply chain management

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Responsibility for supply chain management within the organisation is assigned in accordance with the strategy
- 1.2 Technology and software for implementing the strategy is

- strategy** accessed and operationalised within the requirements of the strategy and budgetary allocation
- 1.3 Policies and procedures are designed to guide business relations and operations in accordance with the strategy
- 1.4 Supporting business processes are designed or re-designed to support implementation of the strategy
- 1.5 Support is provided to staff, customers and supply chain to assist in implementation of the strategy
- 2 Manage supply chain**
- 2.1 Communication and information exchange with strategic partners and suppliers is managed in accordance with the supply chain management strategy
- 2.2 Collaboration with supply chain organisations is facilitated to determine demand at each level of the supply chain in accordance with the strategy
- 2.3 Sales and payments are managed in accordance with supply chain and risk management strategies, and legal and ethical requirements
- 2.4 Actions to build trust and foster a supply chain culture are implemented in accordance with the strategy
- 2.5 Opportunities are identified to adjust policies and procedures to respond to the changing needs of customers, supply chain and the organisation
- 3 Evaluate and improve supply chain effectiveness**
- 3.1 Demand chain management and supply chain management are monitored in accordance with the supply chain management strategy
- 3.2 Effectiveness of the supply chain is reviewed with each level of the supply chain, including staff and customers, and areas are identified for improvement
- 3.3 Business data and reports are used to compare outcomes, budgets, timelines and forecasts to actual performance
- 3.4 Technology performance is reviewed and recommendations are made for improvements to hardware, software and/or their use, in accordance with strategy and budget
- 3.5 Feedback and evaluation results are used to plan and improve future supply chain management strategies

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL5055A Manage a supply chain.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIL5055 Manage a supply chain

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- developing and implementing policies
- focusing on the customer
- implementing, managing and reviewing management strategies
- implementing contingency plans
- negotiating and liaising with suppliers and relevant stakeholders, verbally and in writing
- using appropriate technology, including software
- working collaboratively with others
- working with attention to detail and thoroughness.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- business terms and conditions for purchasing, tendering and contracting
- ethical behaviour
- legislation related to importing commodities
- legislation, codes of practice, and national and international standards such as the Trade Practices Act, Sale of Goods Act and contract law
- organisational policies and procedures related to supply chain management, purchasing, contracting and tendering
- procedures for operating electronic communications equipment
- product knowledge related to goods and services required by the organisation
- requirements for completing relevant documentation

- ways to build trust and collaboration as opposed to competition.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIL5057 Maintain, monitor and improve transport operations systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to maintain, monitor and improve an enterprise's transport operations systems in various contexts within the transport and logistics industry.

It includes identifying systems involved with enterprise transport operations, overseeing conditions required for a safe and effective operations system, and reviewing the overall efficiency of those transport operation systems.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |  |     |   |
|--|-----|---|
| <b>1 Identify operations systems</b>   | 1.1 | Systems involved with enterprise transport operations are identified  |
|  | 1.2 | Relevant safety and efficiency issues regarding operations systems are identified                                   |
| <b>2 Oversee conditions required for safe and effective operations systems</b> | 2.1 | Procedures for improving enterprise operations systems are implemented  |
|  | 2.2 | Changes caused by improvements in operations systems are communicated to relevant personnel                         |
|  | 2.3 | Supervision is allocated according to the skill level and job role of the team member                               |
|  | 2.4 | Appropriate management systems are used to oversee operations systems   |
| <b>3 Review overall efficiency of transport operations systems</b>             | 3.1 | Procedures for improving enterprise operations systems are reviewed and appropriate action is taken as required     |
|  | 3.2 | Team members are provided with regular feedback on their work output in accordance with organisational requirements |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIL5057 Maintain, monitor and improve transport operations systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and related standard operating and servicing procedures
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when maintaining, monitoring and improving transport operations systems
- completing documentation related to work activities
- identifying, managing and reviewing operation systems
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading and interpreting policies, documents, legislation, instructions, procedures, information and signs relevant to work activities.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- principles, purpose and location of controls, monitoring devices and systems
- procedures for adjusting controls to optimise the operation of the equipment
- relevant sections of national and state/territory regulatory requirements and codes of practice
- requirements for completing relevant documentation
- steps involved in planning the activities.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIL5065 Roster train crews

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to roster train crews for duty in accordance with legislative, regulatory and organisational requirements.

It includes knowledge of rostering techniques, communicating rosters to train crew, and the administrative systems that are used in the rostering function.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

- |  |  |
|--|--|
| <b>1 Plan for train crew rostering</b> | 1.1 Purposes of rostering train crew are identified and explained          |
|  | 1.2 Steps associated with rostering are identified, explained and followed |

- 1.3 Equipment and resources required for train crew rostering are identified, explained and acquired
  - 1.4 Information resources required for train crew rostering are identified, explained and accessed
  - 1.5 Hazards are identified, risks are assessed and control measures are implemented
  - 1.6 Rules, guidelines, boundaries and/or constraints associated with train crew rostering are identified, explained, followed and/or accommodated
  - 1.7 Source of rules, guidelines, boundaries and/or constraints associated with train crew rostering are identified, explained and consulted
  - 1.8 Need to verify and question, and the source to obtain verification of the rules, guidelines, boundaries and/or constraints are identified and explained
- 2 Compile train crew roster**
- 2.1 Computer software and hardware associated with train crew rostering are identified, explained and used
  - 2.2 Administrative or paper work associated with train crew rostering is identified, explained and completed
  - 2.3 Paper based, electronic based and verbal based train crew rostering communications methods are identified, explained and used appropriately
  - 2.4 Verbal procedures for communicating train crew rostering information, including confidentiality, are identified, explained and implemented
  - 2.5 Procedures to obtain managerial authorisation of train crew roster are followed
  - 2.6 Potential issues that may need to be resolved when compiling a train crew roster are identified and explained
  - 2.7 Range of methods to resolve identified potential issues are developed and implemented
  - 2.8 Calculations are undertaken to ensure optimal roster is produced
- 3 Update train crew roster**
- 3.1 Need to update a train crew roster is identified, explained and acted upon

- 3.2 Procedures and communications for updating a train crew roster are identified, explained and followed
- 3.3 Train crew roster is formally reviewed periodically
- 3.4 Procedures to obtain managerial authorisation of train crew roster change are followed

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL5065A Roster train crews.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIL5065 Roster train crews

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively verbally and in writing
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- making calculations using mental arithmetic, time differences, distance/speed/time relationships
- operating computer software and hardware associated with train crew rostering
- producing and amending a train crew roster.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications techniques
- crew booking on and booking off procedures, and physical configuration of locations where this activity occurs
- factors involved in producing an optimal roster
- data required to put a train crew roster together such as station names, approximate driving time to and from driver 'home' station to those stations
- need for managerial authorisation of a roster or roster change
- organisational work health and safety (WHS)/occupational health and safety (OHS) policies and procedures as they relate to train crew rostering
- reasons why a roster may not be optimal
- relevant skills required to use computer systems (keyboard, mouse, software)
- specific crew related procedures and updates publicised by the Rail Safety Regulator
- train crew records of competence.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in rail workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

# TLIL5066 Apply rail resource management principles

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to apply rail resource management (RRM) principles to rail activities.

It includes identifying and applying RRM principles to personal leadership, task management, teamwork, communications, risk management, situational awareness, decision making, managing emergencies and self-management.

This unit covers the application of RRM principles in a management role within the rail industry. It can be applied to freight, heavy haul or metropolitan and regional passenger rail systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

### **1 Apply RRM principles to personal leadership**

- 1.1 Personal responsibility is taken in accordance with RRM principles
- 1.2 Decisiveness is demonstrated when mitigating risk, in accordance with RRM principles
- 1.3 Interventions are made when rules and procedures are not followed by team members, in accordance with RRM principles
- 1.4 Own and team performance is monitored in accordance with RRM principles
- 1.5 Participation in task planning and analysis by team members is encouraged where appropriate, in accordance with RRM principles
- 1.6 Situational leadership is demonstrated in accordance with RRM principles

### **2 Apply RRM principles to task management**

- 2.1 Attention is focused and distractions are managed in normal and high workload situations
- 2.2 Actions of team members are monitored and cross-checked in accordance with RRM principles
- 2.3 Workloads are managed by prioritising and delegating safety-critical and routine tasks
- 2.4 Existing work plans are reviewed and modified as required
- 2.5 Automated systems and controls are managed effectively
- 2.6 Multiple tasks and high workload are identified and prioritised in accordance with RRM principles
- 2.7 Time constraints are discussed with team members when managing workload

### **3 Apply RRM principles to teamwork**

- 3.1 Assistance and advice is provided to team members
- 3.2 Workload of team members is considered before interacting with them
- 3.3 Team awareness of safety is enhanced by sharing experiences

- 3.4 Open communication and effective working relationships with others are established
- 3.5 Professional or personal biases are identified and put aside to promote cooperation
- 3.6 Interpersonal skills are used to defuse arguments and to resolve conflict
- 3.7 Advice is sought and considered from team members and/or relevant sources as required

#### **4 Apply RRM principles to communications**

- 4.1 Information and operational plans are shared with others as required, prior to commencing work
- 4.2 Critical events are debriefed to improve the way they are handled next time
- 4.3 Understanding is confirmed at end of a briefing or debriefing
- 4.4 Questions are asked to clarify understanding
- 4.5 Relevant information is passed on to keep team members up-to-date
- 4.6 Instructions, information and explanations are given in a clear and unambiguous manner
- 4.7 Correct radio protocol is used at all times
- 4.8 Proper handover to another person or team is conducted at end of shift for critical operational tasks

#### **5 Apply RRM principles to risk management**

- 5.1 Principles of threat and error management are applied in rail industry workplaces
- 5.2 Particular caution is exercised under unusual or demanding conditions
- 5.3 Deadlines are balanced with safety considerations
- 5.4 Tasks are carried out in accordance with risk management policies and procedures
- 5.5 Rules and procedures are followed at all times
- 5.6 Management of potential hazards and/or abnormal situations is discussed with team members

- 5.7 Equipment is operated safely in accordance with rules and limits
- 6 Apply RRM principles to decision making**
- 6.1 Relevant information to help understand problem is gathered and analysed
- 6.2 Opinions and suggestions are sought from others before deciding what to do
- 6.3 Available time is used to consider all options, not just the most obvious alternative
- 6.4 Potential risks for each alternative being considered are discussed with appropriate personnel
- 6.5 Appropriate option/s is selected and implemented based on available information
- 6.6 Outcome of decision/s is reviewed to ensure solution was effective
- 7 Apply RRM principles to managing emergencies**
- 7.1 Risk is regularly re-assessed when dealing with emergency situations
- 7.2 Training and experience is applied to carry out most important actions in an emergency
- 7.3 Reassurance is given to others to help them remain calm in an emergency
- 7.4 Action is taken to protect passengers and/or rail workers from further danger in an emergency
- 8 Apply RRM principles to self-management**
- 8.1 Composure is shown in managing emergency and/or other demanding situations
- 8.2 Effects of fatigue in self and/or others are recognised and appropriate action is taken to manage this
- 8.3 Effectiveness is maintained under stress or periods of high workload
- 8.4 Assistance is requested to deal with difficult or abnormal situations

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL5066A Apply rail resource management principles.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIL5066 Apply rail resource management principles

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and using rail industry standards
- applying relevant legislation and workplace procedures
- communicating effectively with others, particularly in relation to interpreting complex information relating to rail operations
- developing and maintaining currency of rail industry knowledge and regulatory requirements
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- networking and building relationships with a diverse range of rail industry organisations.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications systems, procedures and protocols in the rail industry
- decision-making processes and their application within a rail environment
- key concepts and definitions relating to rail resource management (RRM)
- key emergency management principles and practices associated with railway operations
- leadership principles and practices
- relevant documentation/records
- relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental legislation
- relevant state/territory legislated rail safety requirements, codes of practice and/or guidelines
- risk management principles and procedures

- task management principles and procedures
- teamwork principles.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in rail workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant RRM principles exercises, case studies and/or simulations related to personal leadership, task management, teamwork, communications, risk management, situational awareness, decision making, managing emergencies and self-management
- relevant and appropriate RRM principle materials, tools and equipment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIL5069 Manage a rail yard or terminal

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to manage a rail yard or terminal, in accordance with legislative, regulatory and organisational requirements.

It includes preparing to manage the rail yard or terminal, overseeing rail yard or terminal operational requirements, overseeing resourcing, implementing the safety management system, and developing and implementing rail yard or terminal emergency procedures.

This unit can be applied to freight yards, marshalling yards, intermodal terminals, maintenance yards or private sidings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Prepare to manage rail yard/terminal**
  - 1.1 Purpose of rail yard/terminal operations is identified and explained
  - 1.2 Principal factors involved in rail yard/terminal operations are identified and explained
  - 1.3 Methods by which rail yard/terminal operations can be measured are identified and implemented
  - 1.4 Functionality and operability of rail yard/terminal layout is explained
  - 1.5 Interfaces between rail transport operators who access or connect with the rail yard/terminal are explained
  - 1.6 Chain of responsibility requirements are explained
- 2 Oversee rail yard/terminal operational requirements**
  - 2.1 Factors that contribute to optimal rail yard/terminal capacity and operational requirements are identified and communicated to appropriate personnel
  - 2.2 Strategies for developing and maintaining optimal rail yard/terminal operational requirements are developed and implemented
  - 2.3 Methods by which optimal rail yard/terminal operational requirements can be measured are developed and applied
  - 2.4 Factors that could impact on scheduled activities are outlined and optimal rail yard/terminal operations and strategies to manage them are developed and implemented
  - 2.5 Relevant communications systems and protocols are identified and implemented
  - 2.6 Protocols for rolling stock arrivals or departures from the rail yard/terminal are developed and applied
- 3 Oversee rail yard/terminal resourcing requirements**
  - 3.1 Equipment required for rail yard/terminal operations is identified and obtained in accordance with organisational policies and procedures
  - 3.2 Contractor/external service requirements are documented and their work is supervised as required, in accordance with organisational policies and procedures
  - 3.3 Rail yard/terminal maintenance requirements are identified, arranged and supervised in accordance with

organisational policies and procedures

3.4 Responsibilities at interfaces with other rail transport operators are defined and allocated in accordance with regulatory and organisational policies and procedures

#### **4 Implement the organisational safety management system**

4.1 Organisational safety management system (SMS) local safety requirements are identified and managed in accordance with organisational policies and procedures

4.2 Rail yard/terminal safety plans are identified, confirmed as appropriate and communicated to relevant personnel in accordance with organisational policies and procedures

4.3 Required safety equipment is confirmed and arranged in accordance with organisational policies and procedures

4.4 Movement of vehicles within rail yard/terminal is monitored to ensure compliance with SMS

4.5 Integrity of vehicles programmed for movements is monitored and suitable risk controls are applied to enable movements to proceed

4.6 Individual worksite areas within rail yard/terminal are protected to ensure they can be isolated safely

4.7 Stabling of vehicles within rail yard/terminal is monitored to ensure compliance with SMS

4.8 Contractor/visitor access protocols are implemented and communicated to relevant personnel in accordance with organisational policies and procedures

4.9 Security systems and protocols are identified, implemented and monitored in accordance with organisational policies and procedures

#### **5 Develop and implement rail yard/terminal emergency procedures**

5.1 Rail yard/terminal emergency equipment requirements are confirmed and documented

5.2 Rail yard/terminal hazards are identified, risks are assessed, and risk controls are developed and documented

5.3 Rail yard/terminal emergency response procedures are communicated to relevant personnel in accordance with organisational policies and procedures

- 5.4 Evacuation drills and debriefings are arranged in accordance with organisational policies and procedures
- 5.5 Issues arising from evacuation drills and/or debriefings are identified and addressed

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL5069A Manage a rail yard or terminal.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIL5069 Manage a rail yard or terminal

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and using rail industry standards
- applying relevant safeworking system and workplace procedures
- communicating effectively with others and interpreting complex information relating to rail yard/terminal operations and interfacing rail network/s
- developing and implementing rail yard or terminal emergency procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing the safety management system
- overseeing rail yard or terminal operational and resourcing requirements
- preparing to manage the rail yard or terminal
- reviewing regulatory information changes.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- changes in rail industry operations and technology with implications for rail yard/terminal operations
- key principles and practices associated with rail yard/terminal operations
- rail industry terminology, including terminology used in rail industry standards and codes of practice
- rail infrastructure capacities related to rail yard/terminal operations
- relevant rail safety management system (SMS), work health and safety (WHS)/occupational health and safety (OHS) and environmental legislation related to rail yard/terminal operations

- rail regulatory framework, rail industry standards, rules, codes of practice and guidelines
- safety management system
- safeworking systems used within and interfacing with, rail yard/terminal operations
- stop boards and speed boards related to rail yard/terminal operations
- types of rail yard/terminal operations being carried out
- types of vehicles within rail yards/terminals
- yard/terminal limits related to rail yard/terminal operations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in rail workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail yard or terminal workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, rules, codes of practice, guidelines and operation manuals.

# TLIL5070 Manage rail freight operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to manage rail freight operations, in accordance with legislative, regulatory and organisational requirements.

It includes preparing to manage rail freight operations, optimising rail freight operations, incorporating rail safety requirements into the organisational safety management system (SMS), and developing and implementing rail freight operations emergency response procedures.

This unit covers applying knowledge of rail freight operations. It can be applied to both interstate and local freight rail systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential                      Performance criteria describe the performance needed

outcomes.

to demonstrate achievement of the element.

### **1 Prepare to manage rail freight operations**

- 1.1 Goals of rail freight operations are identified and explained
- 1.2 Principal factors involved in rail freight operations are identified and outlined
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Resources, equipment and relevant information for rail freight operations are identified and obtained
- 1.5 Methods by which rail freight operations can be measured are identified and implemented
- 1.6 Australian and international standards used in rail freight operations are identified, explained and followed

### **2 Optimise rail freight operations**

- 2.1 Factors that contribute to optimal rail freight operations are identified and explained
- 2.2 Strategies for ensuring optimal rail freight operations are maintained, are developed and implemented
- 2.3 Methods by which optimal rail freight operations can be measured are developed and applied
- 2.4 Information and decision support systems that aid optimal rail freight operations are identified, explained and used

### **3 Incorporate rail freight safety requirements into organisational safety management system**

- 3.1 SMS elements that contribute to rail freight operations are identified and explained
- 3.2 Plans used to implement staff safeworking practices in freight operations are identified and explained
- 3.3 Communications protocols used to implement plans for safe freight operations are identified, explained and applied
- 3.4 Hardware equipment used in pro-active safe freight operations is identified, explained and accessed

- 3.5 Staff resources used in safe freight operations are identified, explained, obtained and maintained
- 4 Develop and implement rail freight operations emergency response procedures**
- 4.1 Emergency equipment used in event response is confirmed and documented
- 4.2 Rail freight operations emergency response procedures are communicated to relevant personnel in accordance with organisational policies and procedures
- 4.3 Post event reporting requirements are identified, explained and documented
- 4.4 Rail freight operations emergency response training requirements are planned and actioned in accordance with organisational policies and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIL5070A Manage rail freight operations.

# TLIL5071 Manage rail passenger operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to manage rail passenger operations, in accordance with legislative, regulatory and organisational requirements.

It includes preparing to manage rail passenger operations, optimising rail passenger operations, incorporating rail passenger safety requirements into the organisational safety management system (SMS), and developing and implementing rail passenger emergency response procedures.

This unit can be applied to both metropolitan and regional passenger rail systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

L – Resource Management

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Prepare to manage rail passenger operations**
- 1.1 Goals of rail passenger operations are identified and explained
  - 1.2 Principal factors involved in rail passenger operations are identified and outlined
  - 1.3 Hazards are identified, risks are assessed and control measures are implemented
  - 1.4 Hardware, staff and information resources for rail passenger operations are identified and obtained
  - 1.5 Methods by which rail passenger operations can be measured are identified and implemented
  - 1.6 Australian and international standards used in rail passenger operations are identified, explained and followed
- 2 Optimise rail passenger operations**
- 2.1 Factors that contribute to optimal rail passenger operations are identified and explained
  - 2.2 Strategies for ensuring optimal rail passenger operations are maintained, are developed and implemented
  - 2.3 Methods by which optimal rail passenger operations can be measured are developed and applied
  - 2.4 Information and decision support systems that aid optimal rail passenger operations are identified, explained and used
- 3 Incorporate rail passenger safety requirements into organisational safety management system**
- 3.1 SMS elements that contribute to rail passenger operations are identified and explained
  - 3.2 Plans used to implement staff safeworking practices in passenger operations are identified and explained
  - 3.3 Communications protocols used to implement plans for safe passenger operations are identified, explained and applied
  - 3.4 Hardware equipment used in pro-active safe passenger operations is identified, explained, obtained and maintained

- 3.5 Staff resources used in safe passenger operations are identified, explained and obtained

## TLIL5072 Manage rail yard operations

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to manage rail yard operations, in accordance with legislative, regulatory and organisational requirements.

It includes preparing to manage rail yard operations, optimising rail yard operations, managing rail yard resourcing requirements, incorporating rail yard safety requirements into the organisational safety management system (SMS), and implementing rail yard emergency procedures.

This unit can be applied to freight yards, marshalling yards, intermodal terminals, maintenance yards or private sidings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

L – Resource Management

### Unit Sector

Not applicable.

### Elements and Performance Criteria

Elements describe the essential

Performance criteria describe the performance

outcomes.

## **1 Prepare to manage rail yard operations**

needed to demonstrate achievement of the element.

1.1 Purpose of rail yard operations are identified and explained

1.2 Principal factors involved in rail yard operations are identified and explained

1.3 Hazards are identified, risks are assessed and control measures are implemented

1.4 Methods by which rail yard operations can be measured are identified and implemented

1.5 Rail yard layout, including yard limits and types of operations being carried out are identified and explained

## **2 Optimise rail yard operations**

2.1 Factors that contribute to optimal rail yard operations are identified and explained

2.2 Strategies for ensuring optimal rail yard operations are maintained, are developed and implemented

2.3 Methods by which optimal rail yard operations can be measured are developed and applied

2.4 Factors that could impact on scheduled activities and optimal rail yard operations are outlined

2.5 Relevant communications systems and protocols are identified, explained and implemented

## **3 Manage rail yard resourcing requirements**

3.1 Resources required for planned rail yard operations are identified, explained and obtained

3.2 Personnel required for planned rail yard operations are identified and acquired

3.3 Contractor/external service requirements are identified and monitored in accordance with organisational policies and procedures

3.4 Rail yard maintenance requirements are identified and actioned in accordance with organisational policies and procedures

## **4 Incorporate rail yard safety requirements into organisational**

4.1 SMS elements that contribute to rail yard operations are identified and explained

**safety management system**

- 4.2 Rail yard safety plans are identified, explained and implemented
- 4.3 Safety equipment is identified and maintained
- 4.4 Movement of vehicles within rail yard is monitored to ensure compliance with SMS
- 4.5 Contractor/visitor access protocols are identified, explained and implemented to ensure compliance with SMS
- 4.6 Security systems and protocols are identified and implemented

**5 Implement rail yard emergency procedures**

- 5.1 Rail yard emergency equipment requirements are identified
- 5.2 Rail yard emergency equipment is maintained
- 5.3 Rail yard emergency response procedures are identified, explained and conveyed to relevant people
- 5.4 Evacuation drills and debriefings are participated in as required

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

**Unit Mapping Information**

This unit replaces and is equivalent to TLIL5072A Manage rail yard operations.

## **TLIL5073 Manage train crewing and rostering**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to manage train crewing and rostering, in accordance with regulatory and organisational requirements and codes of practice.

It includes preparing to manage train crewing and rostering, establishing a crew resourcing framework, managing the development of train crew rosters, and monitoring train crew rosters.

This unit also includes a strong focus on train crew fitness for work and rail safety worker competency requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

L – Resource Management

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Prepare to manage train crewing and rostering**

- 1.1 Train timetables/schedules and running times for each line or service are identified and kept updated within roster operations
- 1.2 Train running times/schedules are identified for each line or service to ensure all crewing requirements can be met
- 1.3 Procedures to identify set workings or work tasks to be performed are identified for train operations to be carried out
- 1.4 Hazards are identified, risks are assessed and control measures are implemented
- 1.5 Potential operational problems and their impact on crewing needs are identified and contingency plans are developed

**2 Establish crew resourcing framework**

- 2.1 Individual fitness for work requirements are identified and confirmed as appropriate for train crewing requirements
- 2.2 Fatigue management requirements are identified and taken into consideration
- 2.3 Train crew qualifications and regulated competency requirements are identified and systems to monitor their ongoing currency are identified
- 2.4 Organisational and workplace requirements are identified and strategies to manage them are developed and implemented

**3 Manage the development of train crew rosters**

- 3.1 Regulatory, organisational and workplace requirements are used as the basis to develop train crew rosters
- 3.2 Strategies that allow sufficient flexibility to allow contingency plans to be implemented are identified, developed and applied
- 3.3 Procedures are put in place to ensure rosters are circulated in accordance with organisational policies and procedures
- 3.4 Mechanisms are put in place to receive and address feedback from rostered personnel, and to identify and act upon acceptable modifications
- 3.5 Procedures for documenting and distributing finalised train crew rosters to appropriate personnel are established and implemented

#### **4 Monitor train crew rosters**

- 4.1 Train crew rostering is reviewed at appropriate times to ensure it is meeting current and future regulatory and organisational requirements
- 4.2 Issues with train crew rostering are identified and addressed in accordance with regulatory and organisational requirements
- 4.3 Train crew rosters are revised and disseminated as required

### **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

### **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

### **Unit Mapping Information**

This unit replaces and is equivalent to TLIL5073A Manage train crewing and rostering.

### **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIL5073 Manage train crewing and rostering

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking and workplace procedures
- communicating effectively with others when managing and developing train crew rosters
- establishing a crew resourcing framework
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- managing the development of train crew rosters
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring train crew rosters
- monitoring work activities in terms of planned schedule
- preparing to manage train crewing and rostering
- rectifying identified problems promptly, in accordance with organisational policy and procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation and reporting requirements for developing train crew rosters
- problems that may occur when developing train crew rosters and appropriate action that can be taken to resolve these problems
- rail safety worker competency requirements
- regulatory and organisational requirements, and safeworking systems relevant to developing train crew rosters
- relevant information and documents required to manage train crewing and rostering

- relevant state/territory legislation and regulations in relation to managing train crewing and rostering
- relevant support activities in relation to managing train crewing and rostering
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- train crew fitness for work
- workplace procedures and policies for developing train crew rosters.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in rail workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

## TLIM4004 Mentor individuals or small groups

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to mentor individuals or small groups (two to five people) in the workplace.

It includes preparing for and undertaking mentoring, providing practice opportunities as well as reviewing mentoring processes and progress. It includes developing the required workplace competence in other workers on a one-to-one or small group basis in an on-the-job environment.

This unit applies to experienced workers who take on a mentoring role.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

M – Training and Assessment

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

#### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Prepare for mentoring

1.1 Specific mentoring needs are identified and confirmed through consultation with appropriate personnel

- 1.2 Mentoring objectives are matched to identified development needs
  - 1.3 Mentoring relationship is established with mentoring participant/s
  - 1.4 Mentoring approaches are planned, documented and agreed with mentoring participant/s
  - 1.5 Mentoring delivery methods are selected appropriate to mentoring participant needs, mentor availability, location and resources
- 2 Mentor in the workplace**
- 2.1 Mentoring is conducted in a safe and accessible workplace environment
  - 2.2 Strategies and techniques are employed that facilitate the learning process
  - 2.3 Mentoring objectives, sequence of activities and assessment processes are discussed with mentoring participant/s on a regular basis
  - 2.4 Systematic approach is taken to mentoring, which is regularly revised and modified to meet mentoring participant needs
- 3 Provide opportunities for practice**
- 3.1 Practice opportunities are provided for participant/s
  - 3.2 Various methods for encouraging learning are implemented to meet mentoring participant needs
- 4 Review mentoring**
- 4.1 Mentoring participant/s are encouraged to evaluate own performance and mentoring experience, and to identify areas for improvement
  - 4.2 Own performance as a mentor is evaluated and areas for improvement are identified and acted upon
  - 4.3 Mentoring participant readiness for assessment is monitored and assistance is provided to collect evidence of satisfactory performance
  - 4.4 Mentoring plan and process are evaluated in context of self-assessment, mentoring participant feedback, evaluation of own performance, supervisor comments and measurements against workplace objectives
  - 4.5 Mentoring details are recorded according to enterprise and legislative requirements

4.6 Review results are used to guide further workplace mentoring

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIM4004A Mentor individuals or small groups.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIM4004 Mentor individuals or small groups

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices
- building trust with mentoring participant/s
- communicating effectively verbally and in writing using a range of strategies including:
  - ensuring language used suits target audience
  - giving and receiving feedback
  - listening
  - questioning
- completing and maintaining required documentation and records
- developing effective planning documents
- ensuring currency of relevant legislative and regulatory knowledge
- maintaining confidentiality
- making recommendations for further mentoring opportunities
- motivating mentoring participant/s
- planning and managing time effectively
- planning for and managing contingencies
- providing high quality reports
- sequencing mentoring activity in a way that facilitates the development of competence
- transferring and applying skills and knowledge to new contexts
- working in a culturally diverse environment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- access, equity and human rights issues in relation to own area of work
- correct use of equipment and any other processes and procedures appropriate for mentoring
- ethical handling of performance issues
- identification of evidence of competency
- intended mentoring outcome
- job/role environment skills
- mentoring methodologies and strategies
- relevant legislation, regulations, codes of practice, standards, policies and procedures including:
  - equal employment opportunity (EEO)
  - WHS/OHS and other workplace requirements
- relevant workplace tasks, skills and knowledge
- workplace:
  - application of relevant competencies
  - training plan for competency development.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIO1002 Follow security procedures when working with passengers and personnel

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to follow security procedures when working with passengers and personnel within the transport and logistics industry.

It includes checking and maintaining the security of passengers, workplace personnel and visitors; identifying and responding to security threats or situations; and completing all required security records.

Persons achieving competence in this unit will need to comply with the applicable security regulations and the relevant sections of a transport organisation's workplace security program and procedures.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

O – Security

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Maintain security of passengers, workplace personnel and visitors**

- 1.1 Security checks of passengers, workplace personnel and visitors are carried out in accordance with workplace security program and procedures, within limits of role and responsibilities
- 1.2 Precautions and measures aimed at protecting the security of passengers, workplace personnel and visitors are followed in accordance with workplace security procedures and applicable security regulations
- 1.3 Signs of suspicious behaviour from passengers, workplace personnel or visitors are recognised and reported promptly to designated personnel in accordance with workplace security procedures
- 1.4 Breaches of security requirements for passengers, workplace personnel and visitors are reported promptly to designated personnel in accordance with workplace procedures

**2 Identify a security threat or situation**

- 2.1 Signs of security threats are recognised and investigated in accordance with workplace security procedures
- 2.2 Security threat or situation is identified, assessed and reported promptly, in accordance with workplace security procedures
- 2.3 Implications of the security threat or situation are evaluated in accordance with workplace security procedures
- 2.4 Relevant personnel are alerted to the security threat or situation as required in accordance with workplace security procedures
- 2.5 Communications are maintained with relevant personnel to determine appropriate course of action

**3 Respond to a security threat or situation**

- 3.1 Response to an identified security threat or situation is in accordance with workplace security procedures, received instructions, regulatory requirements and emergency response plan
- 3.2 Security threats or incidents are handled appropriately in accordance with established response plan, within limits of responsibility and duty of care
- 3.3 Responsibilities are fulfilled in accordance with workplace security procedures and regulatory requirements
- 3.4 Assistance is provided in controlling the site prior to and

following arrival of security and/or emergency services

3.5 Assistance is provided to other staff and emergency services personnel conducting an initial survey of the security threat or emergency scene

3.6 Directions of the controlling security/emergency authority are followed and all possible assistance is provided in response to those directions

#### **4 Maintain security records**

4.1 Records of security checks and precautions are kept in accordance with workplace security procedures

4.2 Reports of security incidents or threats are completed in accordance with workplace security procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIO1002A Follow security procedures when working with passengers and personnel.

## **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIO1002 Follow security procedures when working with passengers and personnel

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment, facilities, cargo and passengers
- applying procedures for security checks and precautions in accordance with limits of own role and responsibilities
- applying relevant legislation and workplace procedures
- communicating effectively with others when following security procedures
- completing required documentation and reports related to security procedures
- following security threat/incident response plan and procedures
- identifying and solving and/or reporting problems that arise when following security procedures
- identifying signs of a possible security threat
- modifying activities depending on workplace contexts, risk situations and environments
- reading and interpreting instructions, procedures, applicable regulatory requirements, labels, markings, ID cards and other information relevant to workplace security in the transport and logistics industry
- recognising signs of pillage and theft
- recognising signs of security threats and situations
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- responding to a possible security threat
- selecting and using relevant communications and other equipment required when following security procedures
- working collaboratively with others when following security procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable measures for securing transport terminals, storage facilities, vehicles, trains, aircraft and/or vessels
- applicable transport security legislation including relevant international, national, state/territory Acts, regulations codes and/or guidelines
- common security problems that may occur when carrying out operations in the transport and logistics industry, and action that can be taken to address and resolve these problems
- common security threats and incidents that may occur in transport, logistics and allied industries, and related roles and responsibilities of personnel when reporting and responding to these threats and incidents
- layout of worksite, vehicle, vessel, train or aircraft and operating procedures
- operational work systems, equipment, management and site operating systems when carrying out operations in the transport and logistics industry
- precautions and procedures aimed at protecting the security of passengers, workplace personnel and visitors
- procedures for operating electronic communications equipment in accordance with required protocol
- relevant documentation and reporting requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- relevant quarantine regulations and requirements
- relevant workplace security program, policies and procedures for responding to security threats, situations and emergencies
- signs of pillaging and theft
- signs of suspicious behaviour.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

## **TLIO2011 Provide revenue protection measures**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to provide revenue protection measures during transport operations, in accordance with operational procedures.

It includes preparing for revenue protection activities and implementing revenue protection procedures.

Work is performed under some supervision, generally within a team environment. It involves the application of routine procedures and regulatory requirements when providing revenue protection measures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

O – Security

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Prepare for revenue protection activities**

- 1.1 Strategies to check customer ticketing are confirmed
- 1.2 Resources to implement ticket checks are arranged to suit anticipated passengers numbers
- 1.3 Queuing systems and barriers are set up to ensure ticket checks are comprehensive
- 1.4 Staff are allocated to planned activities in accordance with organisational procedures and policy
- 1.5 Staff are briefed on strategies for checking customer tickets

**2 Implement revenue protection procedures**

- 2.1 Ticket checks are conducted against organisational requirements
- 2.2 Fares are collected or infringement notices are issued
- 2.3 Use of concession, special and privilege passes is monitored for compliance with organisational policies

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

**Unit Mapping Information**

This unit replaces and is equivalent to TLIO2011A Provide revenue protection measures.

# Assessment Requirements for TLIO2011 Provide revenue protection measures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- calculating fares
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating barriers
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- validating tickets
- working collaboratively with others when providing revenue protection measures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- concessional privileges
- customer service requirements
- fare structures
- organisational policies and workplace procedures
- organisation's transport services
- relevant state/territory revenue protection regulations and requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- relevant workplace procedures
- risks and hazards when providing revenue protection within a transport system and related precautions to control the risk
- timetables
- typical problems that can occur when providing revenue protection measures and appropriate action that can be taken to prevent or solve these problems.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

- Resources for assessment include:
- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
