This unit involves the skills and knowledge required to follow security procedures when working with goods and cargo within the transport and logistics industry.

It includes checking and maintaining the security of goods and cargo, identifying and responding to security threats or situations and completing all required security records.

People achieving competence in this unit will need to fulfil the applicable security regulations and the relevant sections of a transport organisation's workplace security program and procedures.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

O – Security

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Maintain security of goods and cargo**
  - 1.1 Goods and cargo are secured as required within specified locations, and transport vehicles, trains, vessels or aircraft, in accordance with workplace security procedures and applicable security regulations
  - 1.2 Seals, tamper proof packaging, locks and other security measures on goods or cargo are checked and maintained in accordance with workplace security procedures
  - 1.3 Signs of pillaging, theft and interference are recognised and reported in accordance with workplace security procedures
  - 1.4 Signs of suspicious goods and cargo are recognised and reported promptly to designated personnel
  - 1.5 Breaches of security requirements are reported promptly to designated personnel in accordance with workplace security procedures
- 2 Identify a security threat or situation**
  - 2.1 Security threat or situation is promptly identified and assessed, and response is prioritised in accordance with workplace security program and procedures
  - 2.2 Implications of the security threat or situation are evaluated in accordance with workplace security program and procedures
  - 2.3 Relevant personnel are alerted to the security threat or situation in accordance with workplace security program and procedures
  - 2.4 Communications are maintained with relevant personnel to determine appropriate course of action
- 3 Respond to a security threat or situation**
  - 3.1 Identified security threat or situation is responded to in accordance with workplace security procedures, received instructions, regulatory requirements and emergency response plan
  - 3.2 Security threats or situations are handled appropriately in accordance with established response plan, and within limits of own responsibility and duty of care
  - 3.3 Responsibilities are fulfilled in accordance with workplace security program and regulatory requirements
  - 3.4 Assistance is provided in controlling the site prior to and following the arrival of security and/or emergency services

- 3.5 Assistance is provided to other staff and emergency services personnel conducting an initial survey of the scene
  - 3.6 Directions of the controlling security/emergency services are followed and all possible assistance is provided in response to those directions
- 4 Maintain security records**
- 4.1 Security records requirements are confirmed
  - 4.2 Records of security checks and precautions are documented in accordance with workplace procedures
  - 4.3 Reports of security threats or situations are completed in accordance with workplace requirements and applicable security requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIO2021A Follow security procedures when working with goods and cargo.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIO2021 Follow security procedures when working with goods and cargo

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment, facilities, cargo and passengers
- applying procedures for security checks and precautions within limits of own role and responsibilities
- applying relevant legislation and workplace procedures
- communicating effectively with others when following security procedures
- completing required documentation and reports related to security procedures
- following established response plan and procedures
- identifying and solving and/or reporting problems that arise when following security procedures
- identifying signs of disruption to goods and cargo
- modifying activities depending on workplace contexts, risk situations and environments
- reading and interpreting relevant instructions, procedures, applicable regulatory requirements, labels, markings, ID cards and other information
- recognising signs of pillage, theft and interference with goods, cargo and mail
- recognising signs of security threats and situations
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- responding to a possible security threat
- selecting and using relevant communications and other equipment
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable measures for securing specified locations (such as transport terminals, storage facilities) and transport vehicles, trains, vessels or aircraft
- applicable transport security legislation including relevant international, national, state/territory acts, regulations codes and/or guidelines
- common security problems that may occur when carrying out operations in the transport and logistics industries, and action that can be taken to address and resolve these problems
- common security threats and situations that may occur in transport and logistics industries, and related roles and responsibilities of personnel when reporting and responding to these security threats and situations
- layout of worksite, vehicle, train, vessel or aircraft and operating procedures
- operational work systems, equipment, management and site operating systems
- procedures for operating electronic communications equipment and required protocol
- relevant documentation and reporting requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- relevant quarantine and bond regulations and requirements
- relevant workplace security program, policies and procedures for responding to security threats, situations and emergencies
- signs of pillaging, theft and interference with goods, cargo and mail.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

## **TLIO3012 Manage disruptive and/or unlawful behaviour**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to manage disruptive and/or unlawful behaviour on transport systems.

It includes monitoring passenger behaviour, identifying and attending to disruptive/unlawful activity, taking appropriate action to control disruptive/unlawful behaviour, and reporting and documenting incident/s.

Work must be carried out in accordance with relevant state/territory authority regulations for managing disruptive and/or unlawful behaviour on transport systems.

While work is performed individually, skills are required to work within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

O – Security

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

### **1 Monitor passenger behaviour**

1.1 Facilities and transportation units under surveillance are regularly monitored to identify and record inappropriate behaviour

1.2 Potential problem situations are quickly identified and steps are taken to defuse the situation in accordance with agreed procedures

1.3 Incidents that breach legislation are identified and appropriate action is taken

1.4 Surveillance equipment is operated within legal and workplace parameters

### **2 Identify and resolve disruptive/unlawful activity**

2.1 Nature of disruptive/unlawful behaviour is accurately assessed and, where possible, conflict is resolved using relevant conflict resolution strategies

2.2 Hazards are identified, risks are assessed and control measures are implemented

2.3 Procedures are followed to isolate offender/s and to minimise disruption to other passengers where appropriate

2.4 Assistance is sought from other staff and external support services as required

2.5 Situation is resolved and follow-up action is implemented in accordance with appropriate workplace rules, regulations and guidelines

### **3 Take action to control unlawful behaviour**

3.1 Assistance is sought from other staff and external support services as required

3.2 Nature of offence and behavioural consequences are clearly communicated to offender/s

3.3 Staff involvement in apprehending offender/s is undertaken within legal and workplace parameters

### **4 Report and document incident/s**

4.1 Incidents are reported using appropriate document format in accordance with workplace policies and procedures

4.2 Documentation is drafted in accordance with workplace rules, regulations and guidelines

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIO3012A Manage disruptive and/or unlawful behaviour.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIO3012 Manage disruptive and/or unlawful behaviour

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating and negotiating effectively with others when managing disruptive and unlawful behaviour on transport systems
- completing relevant documentation
- identifying and correctly using equipment, processes and procedures
- interpreting and following operational instructions and prioritising work
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, guidelines and information
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- resolving conflict situations
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- by-laws and service rules as they apply to disruptive behaviour on transport systems
- common law as it applies to disruptive and unlawful behaviour on transport systems
- customer service requirements

- legal and workplace parameters with regard to unlawful behaviour
- procedures for managing disruptive and unlawful behaviour
- relevant state/territory regulations and requirements for managing disruptive and unlawful behaviour on transport systems
- risks and hazards when managing disruptive behaviour on transport systems and related precautions to control the risk
- transport services provided
- typical problems that can occur when managing disruptive and unlawful behaviour on transport systems and appropriate action that can be taken to prevent or solve these problems.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## **TLIO3015 Maintain security of railway property and revenue**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to maintain the security of railway property and revenue, in accordance with regulatory and workplace requirements.

It includes monitoring and maintaining security of railway property, securing cash revenue, and securing railway property.

Work is performed under some supervision, generally within a team environment.

Work involves the application of regulatory requirements and workplace procedures when maintaining the security of railway property and revenue, as part of workplace activities in the transport and allied industries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

O – Security

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

Elements describe the Performance criteria describe the performance needed to demonstrate

essential outcomes.	achievement of the element.

# Assessment Requirements for TLIO3015 Maintain security of railway property and revenue

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- communicating, consulting and negotiating effectively with others when maintaining the security of railway property and revenue
- completing documentation related to the security of railway property and revenue
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of security equipment and taking appropriate action as required
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and manuals
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant equipment and materials
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others when maintaining the security of railway property and revenue
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- cash-handling procedures
- communications and negotiation requirements for maintaining the security of railway property and revenue
- documentation, reporting and record requirements
- emergency management plan
- equipment and materials used when maintaining the security of railway property and revenue, and precautions and procedures that should be followed in their use
- insurance and public liability implications
- problems that may occur when maintaining the security of railway property and revenue, and appropriate action that can be taken to resolve these problems
- regulations and codes of practice relevant to maintaining the security of railway property and revenue
- relevant rail danger zones
- relevant work health and safety (WHS)/occupational health and safety (OHS) procedures and guidelines
- security management plan
- workplace procedures and policies for maintaining the security of railway property and revenue
- workplace security layout
- workplace security systems and requirements.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIO3016 Apply and monitor workplace security procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to apply and monitor security procedures in accordance with workplace and regulatory requirements within the transport and logistics industry.

It includes checking and monitoring personnel and goods entering the worksite, carrying out surveillance of work areas, dealing with security incidents and emergencies, and completing required reports and surveillance documentation.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

O – Security

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Check and monitor personnel and goods

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Entry and exit of personnel and vehicles are checked to prevent improper entry or unlawful removal of goods and cargo, in accordance with workplace operational procedures

<b>entering the worksite</b>		and statutory authority regulations
	1.2	Potential breaches of security that may cause goods to be at risk are observed and reported promptly to designated personnel in accordance with workplace procedures
<b>2 Carry out surveillance of work areas</b>	2.1	Surveillance of work areas is undertaken in accordance with workplace procedures and regulatory requirements
	2.2	Hazards are identified, risks are assessed and control measures are implemented
	2.3	Breaches of security are identified and action is initiated and/or incident is reported in accordance with workplace procedures and regulatory requirements
<b>3 Respond to security incidents or emergencies</b>	3.1	Security incidents or emergencies are dealt with in accordance with regulations and site operational procedures
	3.2	Appropriate police/security/emergency services are contacted as required, in accordance with workplace procedures
	3.3	Police/security/emergency services are supported as requested
<b>4 Complete required documentation</b>	4.1	Surveillance documentation and reports are completed and files are despatched in accordance with workplace procedures and regulatory requirements
	4.2	Intended message is communicated clearly in written incident and emergency reports in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIO3016A Apply and monitor workplace security procedures.

## Links

# Assessment Requirements for TLIO3016 Apply and monitor workplace security procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others when applying and monitoring security procedures for cargo, freight and mail
- completing relevant documentation
- identifying, selecting and using relevant equipment, processes and procedures for maintaining security when transferring cargo, freight and mail
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- planning own work including predicting consequences and identifying improvements
- reading and interpreting relevant instructions, procedures and information
- receiving, acknowledging and sending messages with available communications equipment
- reporting and/or rectifying identified problems that may arise, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others when applying and monitoring security procedures for cargo, freight and mail
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and international codes and regulations relevant to security arrangements for transferring cargo, freight and mail
- cargo/freight/mail marking and numbering systems
- focus of operation of work systems, equipment, management and site operating systems for securely transferring cargo/freight/mail
- relevant bond, quarantine or other legislative requirements
- relevant work health safety (WHS) /occupational health and safety (OHS) and environmental protection procedures and guidelines
- security problems that may occur when transferring cargo, freight and mail, and appropriate action that can be taken to resolve or avoid these problems
- site layout and operating procedures
- types of hazardous cargo and special handling procedures
- workplace security procedures and policies for transferring cargo/freight/mail.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIO5005 Plan and manage security procedures for the enterprise

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to plan and manage the enterprise's security procedures, in accordance with relevant standards, codes of practice, regulatory requirements and workplace procedures.

It includes assessing security risks, specifying security requirements, implementing a security plan as well as monitoring and reviewing the security system performance.

Work is under general guidance on progress and outcomes. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

The unit generally applies to those with responsibility for resource coordination and allocation, who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

O – Security

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

- 1 Assess security risks**
  - 1.1 Records of security breaches, thefts and damage are reviewed to identify past security incidents
  - 1.2 Potential risks to the security of stock, personnel, facilities, information and equipment are identified, considering internal and external factors
  - 1.3 Relative risks from a range of sources are assessed and compared with existing security measures
  - 1.4 Discrepancies between identified risk and current security processes are noted
- 2 Specify security requirements**
  - 2.1 Decisions and adjustments to security equipment, facilities and services are made based on risk assessment in relation to organisational benefits
  - 2.2 Security organisational arrangements are documented and implementation strategies are established
  - 2.3 Security plan including performance indicators is prepared in accordance with workplace requirements and is circulated for feedback prior to finalisation and implementation
  - 2.4 Questions and feedback from stakeholders are responded to promptly and, where appropriate, incorporated in the plan
- 3 Implement security plan**
  - 3.1 Implementation priorities are identified, and management and workplace personnel are informed
  - 3.2 Competency requirements for the work are identified and staff are allocated and/or trained and assessed to meet identified requirements
  - 3.3 Equipment and facilities are allocated and/or obtained
  - 3.4 Workplace personnel and equipment are organised to meet requirements ensuring that work loads are balanced and other workplace activities are met
  - 3.5 Workplace security policies and procedures are amended and trialed to improve performance
  - 3.6 Operating procedures and methods are explained to workplace personnel and follow-up communication methods are used to ensure work requirements are applied
- 4 Monitor and review**
  - 4.1 Security reports are collated and categorised

- system performance**
- 4.2 Reports are compared to identify trends in breaches
  - 4.3 Security procedures are modified to rectify identified gaps

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIO5005A Plan and manage security procedures for the enterprise.

# Assessment Requirements for TLIO5005 Plan and manage security procedures for the enterprise

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating effectively with others when planning and managing security procedures for transport and logistics enterprises
- completing documentation and records related to planning and managing security procedures for transport and logistics enterprises
- implementing contingency plans, which may include a breach of security procedures
- modifying activities depending on operational contingencies, risk situations and environments
- planning and organising systems and activities, and prioritising work
- providing leadership and working collaboratively with others when planning and managing security procedures for transport and logistics enterprises
- reading and interpreting instructions, procedures, operational data and regulatory requirements relevant to planning and managing security procedures for transport and logistics enterprises and conveying that information to team members
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and applying appropriate technology, information systems and procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of current competencies within functional activity
- business policies for security provision, including outsourcing components of operations and engaging additional resources
- operational security systems, resources, management and workplace operating systems
- problems that may occur when planning and managing security procedures for transport and logistics enterprises and action that can be taken to resolve these problems
- regulations, codes of practice and legislative requirements relevant to planning and managing workplace security procedures
- regulatory, licence and permit requirements relevant to security procedures
- relevant Australian Standards and certification requirements
- relevant workplace documentation procedures
- resource availability including the competencies of individuals in the team/group
- risks and hazards related to planning and managing security procedures and ways of controlling these risks
- workplace policies and procedures, including those covering issue resolution and grievance
- workplace procedures for planning and managing security procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# **TLIO5006 Plan and manage security procedures for transferring and transporting dangerous goods**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to plan and manage security procedures for transferring and transporting dangerous goods in accordance with relevant regulatory requirements and workplace procedures, including the current Australian Dangerous Goods (ADG) Code.

The unit includes clarifying the movements of hazardous or high risk goods, implementing procedures for loading and unloading goods movement activities, checking and monitoring personnel and goods within the work area, coordinating responses on security incidents/emergencies, carrying out surveillance of work areas, and reviewing and completing goods transfer operations.

Work is under general guidance on progress and outcomes. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

The unit generally applies to those with responsibility for resource coordination and allocation, who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

O – Security

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Clarify movements of hazardous or high risk goods**

#### **2 Implement procedures for loading, unloading goods movement activities**

#### **3 Check and monitor personnel and goods within the work area**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Transport schedule details, nature of risk, special precautions and procedures are planned with line managers, supervisory staff and loaders
  - 1.2 Appropriate permits and licences for transfer site/transport route are obtained/confirmed or exemptions are sought, as required
  - 1.3 Potential risks or hazards are identified, assessed and processes are planned to manage risk
  - 1.4 Information collected is checked against workplace procedures and relevant regulatory framework
  - 1.5 Activities requiring special approval or workplace procedure changes are authorised and/or approvals are obtained
  - 1.6 Security procedures are communicated to relevant parties
- 2.1 Advice is provided to relevant emergency response groups (internal and/or external) or other affected personnel or contractors
  - 2.2 Procedures to control movement of equipment and personnel within the goods movement area in relation to identified risks are implemented
  - 2.3 Security procedures are monitored and maintained, and action is taken to modify procedures as required
  - 2.4 Goods are moved in accordance with relevant enterprise procedures and statutory regulations
- 3.1 Personnel and vehicles are checked in accordance with enterprise operational procedures and statutory authority regulations
  - 3.2 Receipt and delivery of consignment is recorded in accordance with enterprise operational procedures to ensure identification of carrier, vehicle, consignment, receiver and documentation

- 4 Coordinate responses on security incidents/emergencies**
- 4.1 Security incidents are dealt with in accordance with statutory authority regulations and workplace operational procedures
  - 4.2 Incident reports are communicated in a concise style that conforms to organisational policy
  - 4.3 Potential security risks are observed and reported in accordance with operational procedures
- 5 Carry out surveillance of work areas**
- 5.1 Surveillance of work areas is in accordance with workplace operational procedures and regulatory requirements
  - 5.2 Buildings and vehicles are appropriately secured
  - 5.3 Personnel and vehicles are authorised to be in a secured area in accordance with workplace security procedures
  - 5.4 Checks are made to ensure storage areas and consignments are secure
  - 5.5 Measures are taken to confirm equipment is secure, in accordance with workplace procedures
- 6 Review and complete goods transfer operation**
- 6.1 Completed activities are checked against operational plan
  - 6.2 Relevant documentation is completed
  - 6.3 Specialised equipment used for the process is maintained and stored
  - 6.4 Worksite is checked and returned to operational status

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIO5006A Plan and manage security procedures for transferring and transporting dangerous goods.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIO5006 Plan and manage security procedures for transferring and transporting dangerous goods

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- assessing security risks arising from the nature of the load
- communicating effectively with others when planning and managing security procedures for the transfer and transport of dangerous goods and hazardous substances
- completing documentation related to planning and managing security procedures for the transfer and transport of dangerous goods and hazardous substances
- determining required permits and licences
- identifying job and site hazards, and planning work to minimise risks
- identifying the factors in work schedules, time and resource requirements (including sourcing expertise external to the work team) when planning and managing security procedures for the transfer and transport of dangerous goods and hazardous substances
- implementing contingency plans
- implementing security procedures required when security measures change
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- planning and implementing procedures for the safe and efficient loading/unloading and movement of dangerous goods
- planning and organising systems and activities
- providing customer and client service
- providing leadership and working collaboratively with others
- reading and interpreting instructions, procedures, information and regulations relevant

to planning and managing security procedures for the transfer and transport of dangerous goods and hazardous substances

- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and applying appropriate technology, information systems and procedures
- selecting appropriate equipment and work systems to maintain the security of loads within requirements for safe handling and protection of goods, transport, personnel and the public
- suggesting improvements to housekeeping and workplace operations and negotiating changes
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of current competencies within functional activity
- application of relevant Australian and international standards and associated certification requirements
- equipment applications, capacities, configurations, safety hazards and control
- hazards that may exist when transferring and transporting dangerous goods and hazardous substances, and ways of controlling the risks involved
- licence and permit requirements applicable to dangerous goods and hazardous substances
- operational work systems, resources, management and workplace operating systems
- quality and customer service standards, policies and procedures
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and regulations
- relevant regulations and codes concerning the handling, transfer and transport of dangerous goods, including the current Australian Dangerous Goods (ADG) Code
- relevant workplace documentation procedures
- resource availability including the competencies of individuals in the team/group
- security problems that may occur when transferring and transporting dangerous goods and hazardous substances, and action that can be taken to report or resolve these problems
- visual inspection procedures
- workplace procedures for planning and managing security for transferring and transporting dangerous goods and hazardous substances.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

## TLIO5017 Manage security of storage facilities

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to manage security of storage facilities as part of work undertaken in various contexts within the transport and logistics industry.

It includes assessing security risks, specifying security requirements and implementing, monitoring and reviewing storage security plan performance.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

O - Security

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Assess security risks

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |     |  |
|-----|--|
| 1.1 | Records of security breaches, thefts and damage are reviewed to identify past security storage incidents               |
| 1.2 | Potential risks to the security of stock, personnel, facilities, information and equipment are identified, considering |

- internal and external factors
- 1.3 Discrepancies between identified risk and current storage security situations are noted
- 2 Specify security requirements**
- 2.1 Decisions and adjustments to storage security equipment and procedures are made based on risk assessment
- 2.2 Questions and feedback from stakeholders are sought and responded to promptly
- 2.3 Finalised storage security plan offering optimal security of storage facility is devised taking into account all feedback and assessments of security risks
- 3 Implement storage security plan**
- 3.1 Storage security plan is implemented and appropriate workplace personnel are informed
- 3.2 Staff competency requirements to implement security plan are addressed with required training
- 3.3 Equipment and needs for improvements are allocated and/or obtained
- 3.4 Storage security plan, policies and procedures are trialled in conjunction with a system for feedback to identify and suggest further improvements
- 4 Monitor and review storage security plan performance**
- 4.1 Security reports are collated and categorised
- 4.2 Reports are compared to identify trends in breaches
- 4.3 Security procedures are modified to rectify identified gaps

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIO5017A Manage security of storage facilities.

## Links

# Assessment Requirements for TLIO5017 Manage security of storage facilities

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- assessing, implementing, monitoring and reviewing security plan
- communicating effectively with others when completing work activities to ensure security approaches are understood and implemented
- completing documentation related to work activities including documentation of loss, damage or other security issues
- monitoring performance of equipment or technology designed to enhance security
- monitoring work activities in terms of planned schedule
- working collaboratively with others to enhance security awareness.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- business policies for security provision, including out-sourcing components of operations and engaging additional resources
- focus of operation of security systems, resources, management and workplace operating systems
- licence and permit requirements relevant to security procedures
- problems that may occur when planning and managing security procedures and action that can be taken to resolve these problems
- regulations, codes of practice and legislative requirements relevant to planning and managing workplace security procedures
- relevant Australian standards and certification requirements
- resource availability including the competencies of individuals in the team/group

- risks and hazards related to planning and managing security procedures and ways of controlling these risks
- workplace procedures for planning and managing security procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

## TLIO5018 Manage compliance with customs excise

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to manage compliance with customs excise as part of work undertaken in various contexts within the transport and logistics industry.

It includes determining the rate of excise under the Customs Tariff Act 1995, determining any conditions and exceptions that apply to goods, interpreting concessional rates of duty, calculating duty amounts and following documentation requirements.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

O - Security

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Determine the rate of excise under the Customs Tariff

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Classification of goods are made according to the Customs Tariff Act

- Act**
- 1.2 Goods that incur a customs excise are identified
  - 1.3 Appropriate rate of excise is assessed and applied to the goods
- 2 Determine any excise conditions and exceptions that apply to the goods**
- 2.1 Tariff classification is applied to the goods
  - 2.2 Determination is made as to whether the goods qualify for preferential treatment under free trade agreements and/or other preferential trade agreements
  - 2.3 Special duty rates for the goods are determined
  - 2.4 Determination is made about what types of duty apply to the goods
- 3 Interpret concessional rates of duty according to the Customs Tariff Act**
- 3.1 Interpretative rules of the Customs Tariff Act are applied
  - 3.2 Duty concession AusIndustry assistance schemes are applied to the goods
  - 3.3 Relevant tariff concession order is interpreted
- 4 Determine duty amount**
- 4.1 Duty amount payable is calculated
  - 4.2 Accuracy of the duty calculation is verified
  - 4.3 INCOTERMS 2000 relevant to the invoice are identified
  - 4.4 Determination is made as to whether and when duty is payable
- 5 Follow documentation requirements**
- 5.1 Relevant documentation is passed on to the client
  - 5.2 Completed documentation is processed to ensure it is retained by relevant enterprise personnel, in accordance with customs requirements, and related legislation and workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIO5018A Manage compliance with customs excise.

# Assessment Requirements for TLIO5018 Manage compliance with customs excise

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- completing documentation related to work activities
- dealing with routine issues that may arise when carrying out customs clearance operations
- identifying, interpreting and developing skills and knowledge required for relevant developments in freight services
- modifying activities depending on workplace contexts, risk situations and environments, including taking appropriate initiatives within allowable limits
- monitoring work activities in terms of planned schedule
- negotiating, communicating and liaising effectively with customers and others
- planning and organising work activities when carrying out customs clearance operations
- presenting information using appropriate media and technology
- reading and interpreting instructions, procedures and information relevant to customs clearance practices
- selecting and using relevant computer/communication/office equipment when carrying out customs clearance operations
- working collaboratively as part of a customs broking team.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- code of practice for working collaboratively with others
- Customs Tariff Act and regulations as they relate to refunds, remissions and drawbacks
- differences between the Tariff Concession System (TCS) and the By-law system and other industry assistance initiatives
- procedures for operating electronic communications equipment
- procedures for payments under protest
- recovery of short paid duties
- requirements for completing relevant documentation
- requirements for preferential treatment of goods under free trade agreements or preferential trade agreements
- seizure, forfeiture and condemnation, as it relates to customs clearance practices
- sources of information on developments in customs clearance practices
- structure and application of anti-dumping laws in Australia
- use of the Infringement Notice Scheme
- various forms and functions of securities and temporary importations
- ways of developing required skills and knowledge for developments in customs clearance practices.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIP2014 Capture records into a records keeping system

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to capture records into a records keeping system in accordance with regulations and workplace requirements in the transport and logistics industry.

It includes identifying records to be captured and registering the records within the transport, warehousing, distribution and/or storage industries.

Work is generally performed under some supervision, within a team/group environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

P - Administration and Finance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify records to be captured

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Material identified and classified for registration is sorted in accordance with records keeping system procedures

- 1.2 Activity documented by the record is identified from the elements of the record in accordance with organisational procedures
  - 1.3 Area or action officer to which the record needs to go is identified from elements of the record and staff list in accordance with organisational procedures
  - 1.4 Material that cannot be readily identified is referred to the appropriate authority in accordance with organisational procedures
- 2 Register each record**
- 2.1 Unique identifier is selected for record in accordance with organisational procedures and records keeping system rules
  - 2.2 Record is registered into records keeping system with title, description, details of record creator, immediate location and any other control information to fulfil the system requirements in accordance with organisational procedures
  - 2.3 Access and security status are recorded in accordance with organisational procedures and records keeping system rules
  - 2.4 Disposal status of the record is recorded in accordance with records keeping system rules and organisational procedures
  - 2.5 Record is forwarded to its appropriate location, which is recorded, in accordance with records keeping system rules and organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## TLIP2017 Maintain control of records

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to maintain control of records in the transport and logistics industry, in accordance with regulations and workplace requirements.

It includes tracking records, conducting file audits, preparing reports from a records system, preparing staff lists, and implementing disaster recovery procedures.

Work is generally performed under some supervision, within a team/group environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

P - Administration and Finance

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Track record

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Unique record identifier to be located is determined from request or instructions

1.2 Location of record is obtained from records system in accordance with records system rules and organisational

procedures

1.3 History of record location is obtained from records system in accordance with records system rules and organisational procedures

1.4 Information about record is obtained from records system in accordance with records system rules and organisational procedures

1.5 Information about record is updated and amended in accordance with organisational procedures

1.6 All transactions on the records system are completed within the designated timeframe

- 2 Conduct a file audit**
- 2.1 Files are physically located with action officer and in storage areas, in accordance with supervisor instructions
- 2.2 Discrepancies between nominal and actual record locations are identified
- 2.3 Supervisor is clearly/specifically informed/notified of any discrepancies and/or issue
- 2.4 Unacceptable record keeping practices are observed and noted during audit activities, in accordance with organisational procedures
- 2.5 Information about any anomalous record is updated and amended in accordance with organisational procedures
- 2.6 Reconciliation statement is prepared and forwarded to supervisor in accordance with organisational procedures and records system procedures
- 3 Prepare reports from records system**
- 3.1 Reports are prepared from system in accordance with supervisor instructions or requests
- 3.2 Reports are prepared in accordance with workplace procedures and records system procedures
- 3.3 All reports from the records system are prepared within the designated timeframe
- 4 Prepare staff lists**
- 4.1 Staff and user lists are checked and updated to accord with the current locations and designations of organisational staff members in accordance with supervisor instructions
- 4.2 Staff and user lists are duplicated and circulated to all those

requiring copies, in accordance with supervisor instructions

- 5 Implement disaster recovery procedures**
- 5.1 Policies and procedures are identified for disaster recovery
  - 5.2 Recovery actions are undertaken in accordance with workplace procedures and scope of authority
  - 5.3 Appropriate personnel are informed of actions taken in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## TLIP2018 Provide information from and about records

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to provide information from and about records in the transport and logistics industry in accordance with regulations and workplace procedures.

It includes identifying the range of records required, gathering the required records, interpreting and administering access rules and procedures and providing the information in response to users' requests.

Work is generally performed under some supervision, within a team/group environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

P – Administration and Finance

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify range of

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Specific information required by the user is identified from interpretation of the user request and clarified where initial

- records required** request is unclear
- 1.2 Range of records likely to contain the information required by the user is identified from analysis of the request
  - 1.3 Availability of the required records is accessed using appropriate finding aids and record keeping system
  - 1.4 Where the information required exceeds own ability to meet the request, user is referred to an appropriate colleague or list of external organisation/s
- 2 Gather required records**
- 2.1 Range of records likely to contain the information required by the user is obtained and analysed for the required content
  - 2.2 Information is extracted as required and is prepared in line with the request
  - 2.3 Specific records satisfying user requirements are gathered in accordance with organisational procedures
  - 2.4 Records are tracked to record change in location and use by the requesting user in accordance with record keeping system rules and organisational procedures
  - 2.5 Obstacles to obtaining specific records within the specified time are explained to the user and a revised timeline is agreed
- 3 Interpret and administer access rules and procedures**
- 3.1 User requesting the record is identified and access rules and procedures category are confirmed in accordance with organisational procedures
  - 3.2 Access restriction rules and guidelines are applied to the records requested and to match the user access category
  - 3.3 Where access restriction rules and guidelines prevent access to the user, the decision is recorded and the user is informed of their rights to a review of the decision
  - 3.4 Where partial access restriction is determined, the restricted portions of the records or information and the basis of the restriction are identified and documented
- 4 Provide information in response to user requests**
- 4.1 Specific records or portions thereof, information and/or records are protected to prevent access as required, in accordance with access rules and organisational procedures
  - 4.2 Requested information is prepared for the user in an appropriate format, in accordance with initial request and

organisational procedures

- 4.3 All access rules, record preservation requirements, specified timelines and work health and safety (WHS)/occupational health and safety (OHS) guidelines are adhered to
- 4.4 Records retrieved and used to provide information are documented according to system rules and organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIP2018A Provide information from and about records.

## Links

Companion Volume implementation guides are found in VETNet -

## Assessment Requirements for TLIP2018 Provide information from and about records

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when providing information from or about records
- completing documentation related to providing information from or about records
- identifying, selecting and efficiently and effectively using equipment for providing information from or about records
- maintaining security and confidentiality of material
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- planning own work including predicting consequences and identifying improvements
- reading, interpreting and following instructions and procedures relevant to providing information from or about records
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- using a range of information technology devices to required protocol including computers, radio frequency devices, electronic data exchange systems
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- housekeeping standards and procedures
- operational workflow within a records management system
- operational work systems, equipment, management and site operating systems for providing information from or about records as part of a records management process
- problems that may occur when providing information from or about records and appropriate action to be taken to resolve these problems
- regulations relevant to providing information from or about records as part of a records management process
- relevant WHS/OHS and environmental protection procedures and guidelines
- types of equipment used in providing information from or about records and the precautions and procedures that should be followed in their use
- workplace procedures and policies for providing information from or about records including policies on confidentiality and security of information and records.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIP2024 Conduct financial transactions

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to conduct direct financial transactions within the transport and logistics industry. Work must be carried out in compliance with relevant codes and regulations concerned with the conduct of direct financial transactions during the collection and delivery of valuables, secured products, documents and materials.

It includes operating point of sale equipment, transacting sales, clearing register activity and maintaining sales documents.

Work is performed under general supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

P - Administration and Finance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Operate point of sale equipment

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Point of sale equipment is operated and maintained in line with manufacturer specifications and workplace procedures

1.2 Procedure for opening sales equipment or register is followed

1.3 Adequate change is maintained for use in transactions

1.4 Sales equipment or register is closed off in accordance with workplace cash security procedures

## **2 Transact sale**

2.1 Amount owing is calculated and customer is advised

2.2 Amount tendered in cash transactions is checked, correct change is calculated and given, and receipt/tax invoice is provided as required

2.3 Credit and other non-cash transactions are processed

## **3 Clear register**

3.1 Sales equipment/register is cleared and cash is transferred at required times in accordance with workplace policy

3.2 Cheques, credit and other non-cash transaction documents are handled in accordance with workplace policy and procedures

3.3 Due security is maintained when handling cash in accordance with workplace security procedures

## **4 Maintain sales documents**

4.1 Records are completed for all transactions including refunds and no sales

4.2 Adequate supplies of docketts, vouchers and point of sale documents are maintained

4.3 Debtor transactions are processed in line with workplace procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIP2024A Conduct financial transactions.

# TLIP2029 Prepare and process financial documents

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to prepare and process financial documents in compliance with the relevant financial codes of practice and regulations.

It includes recording and balancing petty cash transactions, balancing all other transactions, rectifying discrepancies as directed, preparing invoices for debtors, and preparing and processing banking documents.

Work is performed under general supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

P – Administration and Finance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Record and balance petty cash transactions

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Petty cash vouchers are prepared in accordance with workplace procedures

- 1.2 Before processing, petty cash claims and vouchers are checked for accuracy and authenticity
  - 1.3 Petty cash transactions are recorded
  - 1.4 Irregularities are noted and referred to nominated person/section in accordance with workplace procedures
- 2 Balance all transactions**
- 2.1 Transactions are presented to nominated person/section for checking in accordance with workplace procedures
  - 2.2 Invoices for payment to creditors are reconciled in accordance with workplace procedures
  - 2.3 Discrepancies between invoices and delivery notes/service agreements are identified and reported for resolution in accordance with workplace procedures
  - 2.4 Errors in invoice charges are identified and corrective action is undertaken within scope of authority in accordance with workplace procedures
- 3 Rectify discrepancies as directed**
- 3.1 Correct and authorised invoices are processed for payment and entered into financial records as required
  - 3.2 Creditor inquiries are resolved within scope of authority or referred to appropriate personnel in accordance with workplace procedures
- 4 Prepare invoices for debtors**
- 4.1 Preparatory calculations are performed to produce accurate invoices
  - 4.2 Relevant documentation is completed to ensure accuracy of contents
  - 4.3 Invoices are distributed to nominated personnel for verification prior to despatch
  - 4.4 Verified invoices are despatched within designated timelines
  - 4.5 Verified figures are entered into financial journals
  - 4.6 Documents are filed for auditing purposes and follow-up action is taken as required
- 5 Prepare and process banking documents**
- 5.1 Financial transactions are listed on deposit forms in accordance with financial institution requirements
  - 5.2 Pay-in documentation is balanced with all financial

calculations

5.3 Financial institution deposit totals are balanced with internal records

5.4 Deposits are lodged with the financial institution

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

# TLIP2038 Conduct, balance and secure financial transactions

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the knowledge and skills required to communicate with customers and to operate a range of point-of-sale equipment to perform sales transactions, and to balance and reconcile a register or terminal.

It involves conducting transactions, clearing the register, counting money, calculating non-cash transactions, and reconciling and recording takings.

This unit applies to frontline staff working under some supervision and requires the application of organisational policy and procedures in undertaking work tasks.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

P – Administration & Finance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Operate point-of-sale equipment**

- 1.1 Point-of-sale equipment is operated in accordance with design specifications
- 1.2 Point-of-sale terminal is opened and closed in accordance with organisational policies and procedures
- 1.3 Point-of-sale terminal is cleared and tender is transferred in accordance with organisational policies and procedures
- 1.4 Cash handling is conducted in accordance with organisational security procedures
- 1.5 Supplies of change and cash float are maintained in point-of-sale terminal in accordance with organisational policies and procedures
- 1.6 Records of transaction errors are recorded in accordance with organisational policies and procedures
- 1.7 Adequate supplies of docketts, vouchers and point-of-sale documents are maintained

**2 Perform point-of-sale transactions**

- 2.1 Point-of-sale transactions are completed in accordance with organisational policies and procedures, and relevant legislation
- 2.2 Organisational procedures for cash and non-cash transactions are identified and applied
- 2.3 Organisational policies and procedures for exchanges and returns are identified and applied
- 2.4 Information is entered correctly into point-of-sale equipment
- 2.5 Total price and amount of cash received is verbally stated and correct change is tendered

**3 Complete sales**

- 3.1 Relevant documentation is completed in accordance with organisational policies and procedures
- 3.2 Sales transactions are processed in a timely manner in accordance with organisational policies and procedures

**4 Remove takings from register or terminal**

- 4.1 Register or terminal is balanced at designated times in accordance with organisational policies and procedures
- 4.2 Cash float is separated from takings prior to balancing and is secured in accordance with organisational policies and procedures

- 4.3 Change is supplied to register or terminal in accordance with organisational policies and procedures
- 4.4 Register or terminal reading or printout is obtained and interpreted
- 4.5 Cash and non-cash documents are removed and secured in accordance with organisational policies and procedures

## **5 Reconcile takings**

- 5.1 Cash is counted accurately
- 5.2 Non-cash documents are calculated accurately
- 5.3 Balance between register or terminal reading and sum of cash and non-cash transactions is determined correctly and recorded in accordance with organisational policies and procedures
- 5.4 Discrepancies between register or terminal reading and sum of cash are determined correctly and recorded in accordance with organisational policies and procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIP2038A Conduct, balance and secure financial transactions.

# Assessment Requirements for TLIP2038 Conduct, balance and secure financial transactions

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation
- applying relevant organisational policies and procedures when handling cash and removing takings from register or terminal, cash float, reading registers and recording information
- calculating financial transactions in accordance with workplace procedures
- communicating effectively verbally and non-verbally
- counting cash
- implementing relevant organisational policies and procedures
- interpreting and completing relevant documentation
- managing time effectively and completing tasks in a set timeframe
- operating register or terminal equipment in accordance with manufacturer instructions and organisational procedures
- processing documentation and records responsibly in accordance with organisational policies and procedures
- reporting on financial transactions
- tendering correct change
- using point-of-sale equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- cash and non-cash handling procedures
- organisational policies and procedures for conducting, balancing and securing financial transactions

- relevant legislation, regulations and codes of practice
- workplace policies and procedures for client service and point-of-sale techniques.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## **TLIP2039 Ensure the confidentiality, privacy and security of customer information**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to apply principles and requirements relating to confidentiality, privacy and security of information collected, when providing services to customers.

It includes maintaining the confidentiality, privacy and security of customer personal information under legislation, and organisational policies and procedures. It also includes working within accepted codes of conduct and following confidentiality, privacy and security provisions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

P – Administration and Finance

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Work within accepted codes of conduct**
  - 1.1 Work requirements and/or delegated task/s are confirmed with relevant personnel
  - 1.2 Types of information required to be collected from customers is identified and confirmed to be in accordance with organisational and legislative requirements
  - 1.3 Customers are treated professionally and with respect when collecting personal data
- 2 Follow confidentiality and privacy procedures**
  - 2.1 Information and requests for information are assessed with regard to what is and what is not disclosable
  - 2.2 Discretion and judgement is used in all communications
  - 2.3 Customer-related matters are only discussed with appropriate personnel
  - 2.4 Advice and clarification is sought from relevant personnel where potential confidentiality issues arise in dealings with information or requests for information
- 3 Follow security procedures**
  - 3.1 Customer information and other confidential documentation is secured appropriately
  - 3.2 All documents required by legislation to be stored for certain periods are clearly labelled and stored securely in accordance with organisational policies and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIP2039A Ensure the confidentiality, privacy and security of customer information.

## **Links**

# Assessment Requirements for TLIP2039 Ensure the confidentiality, privacy and security of customer information

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and securing records
- applying relevant privacy legislation and workplace procedures
- clarifying requirements and resolving difficult issues with customers
- communicating effectively with customers and relevant personnel
- documenting activities where confidentiality, privacy and security are maintained
- identifying types of requests that are likely to be made and providing appropriate responses.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- commonwealth privacy legislation and Australian Privacy Principles
- organisational policies and procedures for confidentiality, privacy and security
- relevant legislation, regulations, codes of practice and standards that impact on business operations
- relevant workplace security procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

## **TLIP3034 Advise on and construct fares for customers**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to advise on and construct fares for customers in accordance with regulatory and workplace requirements.

It includes advising on air, coach, ferry, tram, bus and rail fares; constructing fares and itineraries; and issuing documents.

While work is performed individually, it will generally be undertaken within a team environment. It involves the application of tourist industry regulatory requirements and workplace procedures when advising on and constructing fares for customers in the transport and allied industries.

In providing advice to suit customer needs, the following types of fares must be considered:

- constructed fares
- net fares
- promotional fares
- published fares.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

P – Administration and Finance

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Advise on fares

- 1.1 Transport provider information is correctly interpreted to provide accurate information on fare details and conditions
- 1.2 Customers are clearly advised on features of the fares most appropriate to their needs
- 1.3 Accurate fare quotations are provided to customers in accordance with workplace policy and guidelines

### 2 Construct fares and itineraries

- 2.1 Fares are accurately constructed using standard industry techniques, providing the best fare and maximum travel benefits for the customer
- 2.2 Appropriate travel schedules are used to create the optimum itinerary for customers

### 3 Issue documents

- 3.1 Documents are correctly issued and all details are accurately recorded in accordance with workplace and regulatory requirements
- 3.2 Coupons/tickets are processed in accordance with workplace and industry guidelines
- 3.3 Refunds are processed where required in accordance with workplace and industry guidelines

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIP3034A Advise on and construct fares for customers.

## Links

# Assessment Requirements for TLIP3034 Advise on and construct fares for customers

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- applying relevant tourist industry regulatory requirements and workplace procedures
- carrying out relevant research and analysis
- carrying out sales and refund procedures
- communicating and negotiating effectively with others
- completing relevant documentation, including preparing travel documentation
- constructing fares in accordance with workplace procedures
- designing and constructing itineraries
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- processing coupons in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying identified problems promptly, in accordance with tourist industry regulatory requirements and workplace procedures
- working systematically with attention to detail.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- air, coach, ferry, tram and rail fare structures and schedules
- applicable insurance and public liability
- communication and negotiation requirements when advising on and constructing fares for customers
- documentation and record requirements
- Australian travel industry standards
- problems that may occur when advising on and constructing fares for customers, and appropriate action that can be taken to resolve these problems
- procedures for developing fare quotations
- relevant consumer law and trade practice requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) procedures and guidelines
- transport provider information and capability
- workplace procedures and policies for advising on and constructing fares for customers
- workplace travel products and services.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIP4001 Develop plans to meet customer and organisation needs

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to develop plans to meet customer and organisation needs.

It includes contributing to strategic planning, analysing market needs, contributing to business documentation and communicating with other members of the organisation on planning matters.

Work is performed under limited or minimum supervision with general guidance on progress and outcomes. It involves discretion and judgement for self and others in developing plans to meet customer and organisational needs.

Work involves responsibility for developing work plans and leading others individually or in teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

P – Administration and Finance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Contribute to strategic planning**
  - 1.1 Contribution is made to shared vision and values of the organisation by assisting with examining future opportunities and directions and their use in shaping business goals and objectives
  - 1.2 Contribution is made to strategic planning by assisting with investigating the business environment of the organisation
- 2 Analyse market needs**
  - 2.1 Customer needs are researched and outcomes are analysed and interpreted to establish business options and opportunities
  - 2.2 Opportunities are identified for product and service enhancement through an analysis of existing and potential market opportunities and the development of strategies to strengthen the workplace market focus in suitable directions
- 3 Contribute to business documentation**
  - 3.1 Contributions are made to preparing organisational business plans/budgets
  - 3.2 All workplace insurance needs are identified and suitable cover is taken out
- 4 Communicate with other members of the organisation**
  - 4.1 Outcomes of planning process are communicated to appropriate persons in the organisation
  - 4.2 Feedback mechanisms are used to ensure continuous improvement of planning processes and outcomes

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# TLIP4002 Facilitate and capitalise on change in the workplace

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to facilitate and capitalise on change within the workplace.

It includes participating in planning for the introduction of change, developing creative and flexible approaches to solutions to change-related problems, and managing emerging challenges and opportunities in the workplace.

Work is performed under limited or minimum supervision with general guidance on progress and outcomes. It involves discretion and judgement for self and others in facilitating and capitalising on change and innovation in the workplace.

Work involves responsibility for facilitating change in the workplace and leading others individually or in teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

P – Administration and Finance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Participate in planning the introduction of change**
  - 1.1 Opportunities are taken to respond to the changing needs of customers and the organisation
  - 1.2 Effective contributions are made to the organisation's planning processes to introduce change
  - 1.3 Plans to introduce change are made in consultation with relevant individuals/groups
  - 1.4 Organisation objectives and plans to introduce change are explained clearly to individuals/teams
- 2 Develop creative and flexible approaches to solutions**
  - 2.1 Alternative approaches to managing workplace issues and problems are identified and analysed
  - 2.2 Risks are assessed and action is taken to achieve a recognised benefit or advantage to the organisation
  - 2.3 Workplace is managed in a way that promotes the development of innovative approaches and outcomes
  - 2.4 Creative and responsive approaches to resource management are initiated to improve productivity and/or reduces costs in a competitive environment
- 3 Manage emerging challenges and opportunities**
  - 3.1 Individuals/teams are encouraged and supported to respond effectively and efficiently to changes in organisation goals, plans and priorities
  - 3.2 Coaching and mentoring are used to assist individuals/teams to develop competencies to handle change efficiently and effectively
  - 3.3 Individuals/teams are kept informed of progress in the implementation of change
  - 3.4 Recommendations for improving the methods/techniques to manage change are negotiated with designated persons/groups

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

# **TLIP4003 Implement, maintain and evaluate dangerous goods transport procedures within the workplace**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to implement, maintain and evaluate dangerous goods transport procedures within the workplace, in accordance with relevant regulatory requirements, workplace procedures and codes of practice including the current Australian Dangerous Goods (ADG) Code.

This includes implementing a policy framework for the transport and storage of dangerous goods, establishing and maintaining procedures for identifying hazards and assessing risks, establishing and maintaining assessment procedures for monitoring conformance and controlling risks, implementing and monitoring procedures for maintaining dangerous goods records and evaluating the implementation of dangerous goods transport policies, procedures and programs within the workplace.

Work is under general guidance on progress and outcomes. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

The unit generally applies to those with responsibility for resource coordination and allocation, and who lead individuals or teams .

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

P – Administration and Finance

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Implement a policy framework for the transport and storage of dangerous goods**

#### **2 Establish and maintain procedures for identifying hazards and assessing risks**

#### **3 Establish and maintain assessment procedures for monitoring conformance and**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Policies are developed to comply with the current ADG Code, and dangerous goods transport and storage regulations and are consistent with overall workplace policies
- 1.2 Responsibilities and duties for transporting and storing dangerous goods are clearly defined, allocated and included in job descriptions and duty statements for all relevant positions
- 1.3 Licensing requirements for employees are confirmed
- 1.4 Consultative processes are developed and implemented
- 1.5 Emergency incident/accident procedures are developed and implemented
- 1.6 Information, instruction and training on dangerous goods transport and storage procedures are provided to enable employees to effectively implement the required systems and processes
- 2.1 Hazards in the work area are identified and confirmed
- 2.2 Procedures for ongoing identification of hazards and risk assessment are developed and integrated within work systems
- 2.3 Hazard identification is addressed at the planning, design and evaluation stages of any workplace change
- 2.4 Maintenance and inspection program is instituted to confirm that vehicles, equipment and storage areas comply with regulatory and enterprise requirements
- 3.1 Ongoing system for risk control, based on a hierarchy of controls is developed and integrated within general work procedures

### **controlling risks**

3.2 Measures to control assessed risks and monitor conformance are developed and implemented, in accordance with current ADG Code, relevant dangerous goods transport regulations, code of practice and priorities identified in the workplace

3.3 Non-conformance is investigated and procedures for rectification are instituted

3.4 Inadequacies in dangerous goods transport procedures are identified and measures are implemented to improve workplace practice

### **4 Implement and monitor procedures for maintaining dangerous goods records**

4.1 Dangerous goods records system is established in accordance with relevant legislative framework

4.2 Accurate and legible records for operation within the workplace are completed in accordance with the current ADG Code, dangerous goods transport regulations, enterprise policies and legislative requirements

### **5 Evaluate the implementation of dangerous goods transport policies, procedures and programs within the workplace**

5.1 Effectiveness of the dangerous goods transport policies, procedures and programs is assessed

5.2 Improvements to dangerous goods transport procedures are identified and implemented

5.3 Compliance with current ADG Code, dangerous goods transport regulations and codes of practice is assessed to ensure legal requirements are maintained as a minimum and exceeded where possible

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIP4003A Implement, maintain and evaluate dangerous goods transport procedures within the workplace.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIP4003 Implement, maintain and evaluate dangerous goods transport procedures within the workplace

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- communicating effectively with others when implementing, maintaining and evaluating dangerous goods transport procedures
- completing relevant documentation
- demonstrating knowledge of the hierarchy of control and its implementation in the workplace
- identifying requirements of tasks and organising planning, job completion and evaluation stages
- identifying the factors in work schedules, time and resource requirements (including sourcing expertise external to the work team) when implementing, maintaining and evaluating dangerous goods transport procedures
- implementing and monitoring policies and processes for transporting dangerous goods
- implementing contingency plans
- liaising with authorities, drivers, line managers and customers to ensure policies and procedures are meeting required needs
- managing and prioritising work and coordinating self and others in relation to workplace activities
- mediating and resolving issues about transporting dangerous goods, maximising positive outcomes for the workplace and the individuals within it
- modifying activities to cater for variations in workplace contexts and environment
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- planning and organising systems and activities
- providing customer and client service
- providing leadership and working collaboratively with others when implementing,

maintaining and evaluating dangerous goods transport procedures

- reading and interpreting relevant instructions, procedures, information and manuals
- reporting and/or rectifying problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and applying appropriate technology, information systems and procedures
- selecting and using required personal protective equipment conforming to industry and work health safety (WHS)/occupational health and safety (OHS) standards
- suggesting improvements to dangerous goods transport procedures and negotiating changes as required
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of current competencies within functional activity
- application of relevant Australian and international standards and associated certification requirements
- current ADG Code and relevant Australian Standards applicable to dangerous goods and hazardous substances
- equipment applications, capacities, configurations, safety, hazards and controls
- operation of dangerous goods transport systems, resources, management and workplace operating systems
- hazards that may exist when transporting dangerous goods and hazardous substances, and ways of controlling the risks involved
- problems that may occur when transporting dangerous goods and hazardous substances, and action that can be taken to report or resolve the problems
- quality and customer service standards, policies and procedures
- regulations and codes for transporting goods and freight
- regulatory, licence and permit requirements for transporting dangerous goods
- relevant workplace documentation procedures
- resource availability including the competencies of individuals in the team/group
- workplace processes for implementing, maintaining and evaluating dangerous goods transport procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

## TLIP4005 Manage workplace information

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to manage workplace information.

It includes identifying and sourcing information needs; collecting, analysing and reporting information; using management information systems; contributing to the preparation of operational plans; and preparing resource proposals.

Work is performed under limited or minimum supervision with general guidance on progress and outcomes. It involves the use of discretion and judgement for self and others when managing workplace information systems.

Work involves responsibility for managing information processing and storage systems in the workplace and the leading others individually or in teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

P – Administration and Finance

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Identify and source information needs**
  - 1.1 Information needs of individuals/teams is determined and potential sources of information are identified
  - 1.2 Information held by the organisation is reviewed to determine suitability and accessibility
  - 1.3 Arrangements are made to obtain identified information not available/accessible within the organisation
- 2 Collect, analyse and report information**
  - 2.1 Information relevant to the needs of individuals/teams is collected as required
  - 2.2 Information is collected in or transferred to a format suitable for analysis, interpretation and dissemination
  - 2.3 Information is analysed to identify and report relevant trends and developments in terms of the needs for which it was acquired
- 3 Use management information systems**
  - 3.1 Management information systems are used effectively to store and retrieve data for decision making
  - 3.2 Technology available in the work area/organisation is used to manage information efficiently and effectively
  - 3.3 Recommendations for improving the information system are submitted to designated persons/groups
- 4 Contribute to the preparation of operational plans**
  - 4.1 Individuals/teams are involved in preparing operational plans in ways which use their contribution effectively and gain their support for the outcomes
  - 4.2 Operational plans are prepared and presented in accordance with workplace guidelines and requirements
- 5 Prepare resource proposals**
  - 5.1 Resource planning data is collected in consultation with colleagues, including those who have a specialist role in resource management
  - 5.2 Workplace business plans, and customer and supplier requirements are reflected in estimates of resource needs and use
  - 5.3 Proposals to secure resources are supported by clearly presented submissions describing realistic options, benefits, costs and outcomes

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIP4005A Manage workplace information.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIP4005 Manage workplace information

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when managing workplace information
- identifying and collecting information for use in the workplace
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating electronic communications and information systems equipment to required protocol
- preparing and completing relevant documentation
- reading, interpreting and following relevant instructions and procedures
- reporting and/or rectifying identified problems that may arise, in accordance with regulatory requirements and workplace procedures
- selecting and appropriately applying technology, information systems and procedures to workplace tasks
- selecting and efficiently using information management systems and technologies
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- operational recording, reporting and statistical analysis systems and resources
- relevant regulatory and code requirements
- resource availability including the processing capacity of equipment and software systems for statistical analysis of data
- typical problems that can occur when managing workplace information and related appropriate action that can be taken
- workplace business policies and plans as they relate to financial reporting and information system management and improvement
- workplace protocols and procedures for managing workplace information.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIP5004 Develop a transport and logistics business plan

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to develop a business plan for an organisation or a discrete business unit in the transport and logistics industry, in accordance with relevant Australian and international regulatory requirements, standards, codes of practice and workplace procedures.

This includes conducting a situational and market analysis, analysing the organisational environment, developing appropriate strategies, and implementing and evaluating the resulting business plan.

Work is under general guidance on progress and outcomes. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

The unit generally applies to those with responsibility for resource coordination and allocation, and who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

P – Administration and Finance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## **1 Conduct a situational and market analysis**

- 1.1 Transport and logistics business's principal services, markets, products and the factors that distinguish the business and contribute to its success are identified
- 1.2 Transport and logistics business/operating environment is defined and reviewed using information from staff members, customer feedback and external sources
- 1.3 Qualitative and quantitative market analysis data is documented
- 1.4 Target markets and relevant regulatory requirements are identified
- 1.5 Impact of transport and logistics business on market is recorded and projected change in market and/or services during the life of the plan is projected
- 1.6 Competitors, customer perceptions and market share of existing competitors operating in the transport and logistics industry are identified
- 1.7 Proposed business focus on specific target markets, pricing, sales and appeals are defined
- 1.8 Potential profitable opportunities are identified and documented

## **2 Analyse organisational environment**

- 2.1 Current transport and logistics business operations, practices, work flow, equipment and facilities are analysed
- 2.2 Organisational capability in terms of technology, research, development and tools is outlined
- 2.3 Current resources and resources that may be accessed to meet identified opportunities for business operations are evaluated
- 2.4 Developments in technology predicted within the lifetime of the business plan are evaluated and analysed
- 2.5 Organisational capability in terms of staff, equipment, facilities, operational systems and financial status are assessed for strengths and weaknesses
- 2.6 Costs of making operational adjustments in relation to existing and new business to influence improved profitability

and positioning are reviewed

2.7 Premises for decisions are documented, potential circumstances which may alter the environment are identified and contingency provisions are made

### **3 Develop strategies**

3.1 Benchmark goals are documented and checked for realism in terms of internal and external environmental factors

3.2 Decisions and adjustments regarding resource allocation for products and services are made, based on external and internal analyses

3.3 Organisational adjustments are documented and implementation strategies are established

3.4 Projections of profit and loss or income statements per quarter until break-even point are constructed for the whole organisation and each cost centre

3.5 Business plan, including performance indicators, is finalised in accordance with enterprise requirements and is circulated to stakeholders

3.6 Questions and feedback from stakeholders are responded to promptly and, where appropriate, incorporated into the plan

### **4 Implement and evaluate business plan**

4.1 Implementation plans for the management of workplaces, staff, business operation and operational systems are monitored and, where required, adjustments to the plans are made

4.2 Current and future marketing strategies and areas of specialisation are detailed and implemented

4.3 Organisational performance in relation to identified performance indicators is regularly monitored and reviewed

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIP5004A Develop a transport and logistics business plan.

# Assessment Requirements for TLIP5004 Develop a transport and logistics business plan

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures
- applying relevant legislation and workplace procedures
- communicating effectively with others when developing a transport and logistics business plan
- completing documentation related to work activities and the development of a transport and logistics business plan
- modifying activities to cater for variations in workplace contexts and environment
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- planning and organising business systems and activities
- prioritising work and coordinating self and others in relation to workplace activities
- providing leadership and working collaboratively with others when developing a transport and logistics business plan
- reading and interpreting business and market data, regulatory requirements and other planning information relevant to the development of a transport and logistics business plan
- reporting and/or rectifying identified problems promptly, in accordance with workplace procedures
- selecting and applying appropriate technology, information systems and procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of current competencies within functional activity
- application of relevant Australian and international standards and associated certification requirements
- Australian and international regulations, codes of practice and legislative requirements relevant to business operations
- equipment applications, capacities, configurations, safety hazards and control
- operational competitor and internal business systems, resources, management and workplace operating systems
- hazards that may exist in the operation of a transport and logistics business, and ways of controlling the risks involved
- market and other external environmental factors including the regulatory environment
- organisational strengths and weaknesses including the competencies of individuals in the team/group
- problems that may occur during the development of a transport and logistics business plan, and action that can be taken to report or resolve these problems
- relevant workplace documentation procedures
- resource availability including the competencies of individuals in the team/group
- workplace processes for developing a transport and logistics business plan.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

## TLIP5006 Establish international distribution networks

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to establish international distribution networks, in accordance with the relevant Australian and international regulations, standards, codes of practice and workplace procedures.

It includes sourcing potential networks, establishing potential service provider profiles and contracting suitable service providers.

Work is under general guidance on progress and outcomes. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

The unit generally applies to those with responsibility for resource coordination and allocation, and who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

P – Administration and Finance

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Source potential networks**
  - 1.1 Current and required future enterprise distribution networks are identified
  - 1.2 Potential agents, capable of servicing current or potential operations, are identified
  - 1.3 Initial contact is undertaken with potential service providers
  - 1.4 Information is sourced from potential service agents regarding their capacity, capability and viability to meet identified operations
- 2 Establish potential service provider profiles**
  - 2.1 Distributor contact details, scope of operation/s, costs and service standards are evaluated and documented
  - 2.2 Potential service provider technostructures and infrastructures are assessed, including the system/s compatibility with own operations
  - 2.3 Potential service provider current credit ratings are established in accordance with enterprise procedures
  - 2.4 Security procedures for potential service providers are established in accordance with workplace requirements
- 3 Contract service providers**
  - 3.1 Terms of operation and performance standards are negotiated with selected service providers
  - 3.2 Contracts are completed with selected service provider/s within scope of authority
  - 3.3 Service provider performance is monitored against identified targets within the contract
  - 3.4 Contract variances are renegotiated in accordance with statutory requirements and changes within the international and local trading environments
  - 3.5 Contracts and ancillary documentation are stored in accordance with enterprise and regulatory requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIP5006A Establish international distribution networks.

## Links

# Assessment Requirements for TLIP5006 Establish international distribution networks

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- assessing logistics functions
- communicating and negotiating effectively with others when establishing an international distribution network
- completing documentation related to establishing an international distribution network
- modifying activities to cater for variations in workplace contexts and environment
- monitoring work activities in terms of planned schedule
- negotiating and monitoring contracts
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- planning and organising international distribution systems and projects
- prioritising work and coordinating self and others in relation to workplace activities
- providing leadership and working collaboratively with others when establishing an international distribution network
- reading and interpreting contracts, distribution specifications, regulatory requirements and customer instructions relevant to establishing an international distribution network
- resolving issues and conflicts
- selecting and applying appropriate computing and communications technology, information systems and procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable contract law
- application of current competencies within functional activity
- application of relevant Australian and international standards and associated certification requirements
- Australian and international regulations, codes of practice and legislative requirements relevant to establishing and maintaining international distribution networks
- Australian Dangerous Goods Code and relevant Australian and international regulations and standards applicable to transport and distribution of dangerous goods and hazardous substances
- banking procedures and exchange rates
- focus of operation of distribution systems, resources, management and workplace operating systems
- hazards and risks that may arise when establishing an international distribution network and ways of controlling the risks involved
- international legislation regarding carriage of goods
- operational procedures for document control
- problems that may occur when establishing an international distribution network and action that can be taken to report or resolve these problems
- quality and customer service standards, policies and procedures
- relevant aspects of international and domestic trade operations
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and regulations
- resource availability including the competencies of individuals in the team/group
- workplace policies and processes for establishing an international distribution network.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIP5007 Contribute to the development of a workplace learning environment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to contribute to the development of a workplace learning environment in accordance with the relevant Australian regulations, standards, codes of practice and workplace procedures.

It includes creating learning opportunities, facilitating and promoting learning, and monitoring and improving learning effectiveness.

Work is under general guidance on progress and outcomes. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

The unit generally applies to those with responsibility for resource coordination and allocation, who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

P – Administration and Finance

## Unit Sector

## Elements and Performance Criteria

### ELEMENTS

Elements describe the

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

### **1 Create learning opportunities**

- 1.1 Workplace environments that facilitate learning are developed and supported
- 1.2 Learning plans are developed as an integral part of individual/team performance plans
- 1.3 Diversity of needs and learning opportunities of individual employees and the enterprise are reflected in learning plans
- 1.4 Individual/team access to, and participation in, formal and informal learning opportunities is facilitated
- 1.5 Negotiation is undertaken with training and development specialists to plan and provide learning that enhances the operation of the workplace

### **2 Facilitate and promote learning**

- 2.1 Workplace activities are used as opportunities for learning
- 2.2 Workplace knowledge, skills and attitudes are developed through coaching and mentoring
- 2.3 Benefits of learning are shared with others in the team/workplace
- 2.4 Workplace achievement is recognised by timely and appropriate recognition, feedback and rewards

### **3 Monitor and improve learning effectiveness**

- 3.1 Feedback from individuals/teams is used to identify and introduce improvements in future learning arrangements
- 3.2 Adjustments negotiated with training and development specialists result in improvements to the efficiency and effectiveness of learning
- 3.3 Records and reports of competency are documented and maintained within workplace systems and procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIP5008 Manage a transport and logistics business unit

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others when managing a transport and logistics business unit
- completing documentation related to managing a transport and logistics business unit
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- prioritising work and coordinating self and others in relation to business activities
- reading and interpreting operational data, regulatory requirements, market intelligence, finance, budgetary information and business policies relevant to managing a transport and logistics business unit
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others when managing a transport and logistics business unit
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of current competencies within functional activity
- application of relevant Australian and international standards and associated certification requirements
- Australian and international regulations, codes of practice and legislative requirements relevant to business unit activities
- business policies and priorities
- operational work systems, resources, management and workplace operating systems
- hazards and risks that may arise when managing a transport and logistics business unit, and ways of controlling the risks involved
- information on key competitor operations, strengths and weaknesses
- market intelligence relevant to business operations
- problems that may occur when managing a transport and logistics business unit, and action that can be taken to report or resolve these problems
- quality and customer service standards, policies and procedures
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- resource availability including the competencies of individuals in the team and group
- workplace policies and processes for managing a transport and logistics business unit.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# **TLIP5011 Develop and evaluate strategies for transport and logistics enterprises**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to develop and evaluate strategies for transport and logistics enterprises in accordance with relevant Australian and international regulatory requirements, standards, codes of practice and workplace procedures.

It includes analysing the enterprise's internal and external operating environment, developing strategies to maximise enterprise outcomes, implementing and evaluating strategies, and responding to changes within the transport and logistics environment.

Work is under general guidance on progress and outcomes. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

The unit generally applies to those with responsibility for resource coordination and allocation, who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

P – Administration and Finance

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

### **ELEMENTS**

### **PERFORMANCE CRITERIA**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Analyse the enterprise's internal and external operating environment**

- 1.1 Effectiveness of the enterprise's principal services, products and competitive advantages are identified and confirmed through market analysis
- 1.2 External factors, including legislative requirements, changes to technology, domestic and international market variability and political constraints impinging on enterprise operations are researched and analysed
- 1.3 Impending changes to internal operations or the external environment are determined
- 1.4 Analysis is undertaken of the enterprise's capacity to operate within the defined environment, outlining opportunities to improve market share and/or positioning
- 1.5 Recommendations for changes to workplace structure, systems, procedures, workforce composition and market orientation are generated and documented in consideration of internal and external analysis and enterprise goals and values

**2 Develop strategies to maximise enterprise outcomes**

- 2.1 Recommendations for changes to enterprise operations are assessed for feasibility and for cost-benefit from both a short- and long-term perspective
- 2.2 Enterprise capability and capacity to facilitate changes within financial and time constraints are assessed and documented
- 2.3 Recommendations and supporting documentation are circulated to relevant personnel for agreement
- 2.4 Strategies to implement agreed recommendations are generated and documented
- 2.5 Support processes, including the allocation of human, physical and financial resources, the designation of timelines and the setting of the culture and climate of the enterprise, are undertaken

**3 Implement and evaluate strategies**

- 3.1 Performance benchmarks for measuring the effectiveness of change strategies are implemented
- 3.2 Responsibility for implementing change strategies is clearly defined and allocated to designated personnel
- 3.3 Implementation processes are monitored and adjustments are

made to strategies as required

3.4 Enterprise performance in relation to identified benchmarks is regularly monitored and reviewed, and adjustments are made as required

3.5 Individuals/teams are kept informed of progress in the implementation of change

#### **4 Respond to changes within the transport and logistics environment**

4.1 Nature, extent and impact of issues or changes on enterprise operations are identified

4.2 Relevant information is processed to establish priorities and responses for dealing with issues or changes

4.3 Strategies are generated/adjusted and controlled to meet changes in the transport and logistics environment

4.4 Liaison is initiated and maintained with organisations/individuals affected by changed operational practice

4.5 Actions undertaken are clearly documented and filed

### **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

### **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

### **Unit Mapping Information**

This unit replaces and is equivalent to TLIP5011A Develop and evaluate strategies for transport and logistics enterprises.

# Assessment Requirements for TLIP5011 Develop and evaluate strategies for transport and logistics enterprises

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others when developing and evaluating strategies for an enterprise
- completing documentation related to developing and evaluating strategies for an enterprise
- implementing contingency plans
- modifying activities to cater for variations in workplace contexts and environment
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- planning and organising business systems and activities
- prioritising work and coordinating self and others in relation to workplace activities
- providing leadership and working collaboratively with others when developing and evaluating strategies for an enterprise
- reading and interpreting business and market data, regulatory requirements and other planning information relevant to developing and evaluating strategies for an enterprise
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and applying appropriate technology, information systems and procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- application of current competencies within functional activity
- application of relevant Australian and international standards and associated certification requirements
- Australian and international regulations, codes of practice and legislative requirements relevant to workplace operations
- current and future market initiatives including new technology, products and processes
- operational competitor and internal business systems, resources, management and workplace operating systems
- hazards and risk that may exist when developing and evaluating strategies for an enterprise, and ways of controlling the risks involved
- market and other external environmental factors including the regulatory environment
- organisational strengths and weaknesses including the competencies of individuals in the team/group
- problems that may occur when developing and evaluating strategies for an enterprise, and action to be taken to report or resolve these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and regulations
- relevant workplace documentation procedures
- resource availability including the competencies of individuals in the team/group
- workplace processes for developing and evaluating strategies for an enterprise.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## **TLIP5025 Set and achieve budgets**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to set and achieve workplace budgets in accordance with relevant regulatory requirements, standards, financial codes of practice and workplace procedures.

It includes planning budget requirements, monitoring the budget and taking appropriate corrective action when needed. It also includes monitoring expenditure, and reviewing and appropriately modifying the budget if necessary.

Work is under general guidance on progress and outcomes. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

The unit generally applies to those with responsibility for resource coordination and allocation, who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

P – Administration and Finance

### **Unit Sector**

Not applicable.

### **Elements and Performance Criteria**

#### **ELEMENTS**

#### **PERFORMANCE CRITERIA**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Plan budget requirements**

- 1.1 Financial flows for budgetary periods are planned and scheduled in accordance with workplace requirements
- 1.2 Information on costs and resource utilisation is fully assessed and correctly interpreted
- 1.3 Effective action is taken to reduce costs and enhance value to customer and/or workplace

**2 Monitor budget and take corrective action**

- 2.1 Corrective action is taken in response to actual or potential significant deviations from financial plans
- 2.2 Where a budget under- or over-spend is likely to occur, appropriate people are informed with minimum delay
- 2.3 Prompt, corrective action is taken in response to actual or potential significant deviations from budget

**3 Monitor expenditure**

- 3.1 Expenditure made is within agreed limits and future spending requirements are not compromised, in accordance with workplace policy and procedures
- 3.2 Requests for expenditure outside limits of responsibility are referred to appropriate persons
- 3.3 Expenditure is phased, in accordance with a planned time scale as required

**4 Review and modify budget**

- 4.1 Actual income and expenditure is checked against agreed budgets at regular, appropriate intervals
- 4.2 Necessary authority for changes in allocation between budget heads is obtained in advance of requirement
- 4.3 Modifications made to agreed budgets during the accounting period are consistent with agreed guidelines and are correctly authorised

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIP5025A Set and achieve budget.

## Links

# Assessment Requirements for TLIP5025 Set and achieve budgets

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying basic accounting principles to budgetary processes
- applying relevant legislation and workplace procedures
- communicating effectively with others when setting and achieving budgets
- completing documentation and entering data related to setting and achieving budgets
- making calculations when setting and achieving budgets
- maintaining budgetary records and documentation
- modifying activities to cater for variations in workplace contexts and environment
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- prioritising work and coordinating self and others in relation to workplace activities
- providing leadership and working collaboratively with others when setting and achieving budgets
- reading and interpreting budgetary documents, financial statements and reports, and workplace policies and procedures relevant to setting and achieving budgets
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and applying appropriate technology, information systems and procedures
- working systematically with required attention to detail.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- accountancy practices relevant to budgetary control
- budgetary control systems
- budgetary procedures and policies
- budgetary systems, resources, management and workplace operating systems
- limits of authorised expenditure
- problems that may occur when setting and achieving budgets and action that can be taken to report or resolve these problems
- quality and customer service standards, policies and procedures
- relevant regulations, codes of practice and legislative requirements
- resource availability including the competencies of individuals in the team/group
- risks that may exist when setting and achieving budgets and ways of controlling these risks
- workplace processes for setting and achieving budgets.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIP5035 Manage budgets and financial plans

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to manage budgets and financial plans in various contexts within the transport and logistics industry.

It includes communicating budget and financial plans, monitoring and controlling activities, and reporting outcomes of financial plans.

It covers all of the significant aspects of financial management for operational managers who are not financial specialists. It emphasises preparing users of budgets/financial plans through communication and training, and consistent surveillance over budget performance, with early intervention where required.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

P – Administration and Finance

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Communicate budget and financial plans**

- 1.1 Budget/financial plan communication package is reviewed by finance specialists
- 1.2 Package is amended/revised where appropriate
- 1.3 Training activities are undertaken with users of the budget and plans across the organisation
- 1.4 Data and terms are defined to assist users of the plans
- 1.5 Communication outcomes are tested to ensure clarity of objectives, processes and accountabilities

**2 Monitor and control activities against plans**

- 2.1 Delegations and budget accountabilities are confirmed in writing prior to budget period
- 2.2 Funds are allocated in accordance with budget objectives and parameters
- 2.3 Audit requirements and legal obligations are met through recording systems and documentation
- 2.4 Risk management plans are implemented and contingency plans are in place for all financial plans
- 2.5 Performance is monitored and variances are identified on a real time basis
- 2.6 Variances are analysed in conjunction with relevant experts to determine cause and effect

**3 Report outcomes of financial plans**

- 3.1 Records of financial performance are properly maintained within organisational systems
- 3.2 Financial performance is analysed and reported in a form and language appropriate to the audience
- 3.3 Non-financial objectives are reported in the context of overall organisational performance
- 3.4 Strategies and plans are reviewed and updated to optimise organisational performance

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIP5035A Manage budgets and financial plans.

## Links

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing, reading and interpreting budgetary documents, financial statements and reports, and workplace policies and procedures
- applying basic accounting principles to budgetary processes
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when completing work activities
- identifying and solving problems that may arise when setting and achieving budgets
- making calculations to set and achieve budgets
- modifying budgets and plans as required to accommodate changes
- monitoring work activities in terms of planned schedule
- prioritising work and coordinating self and others in relation to workplace activities
- selecting and applying appropriate technology, information systems and procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- accountancy practices relevant to budgetary control
- budgetary procedures and policies
- budgetary systems, resources, management and workplace operating systems
- limits of authorised expenditure and who has budget authorities
- problems that may occur when setting and achieving budgets and action that can be taken to report or resolve these problems
- quality and customer service standards, policies and procedures
- risks that may exist when setting and achieving budgets and ways of controlling these

risks

- workplace processes for setting and achieving budgets.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

## TLIP5036 Manage assets

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to manage assets as part of work undertaken in various contexts within the transport and logistics industry.

It includes determining asset classification and identification, recording and valuing assets and maintaining an asset management system.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

P – Administration and Finance

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Determine asset classification and identification

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Asset register format is determined on basis of current needs and business plan, in accordance with company requirements

1.2 Compatible classification system that meets asset

accounting and asset management needs is selected, in accordance with company requirements

1.3 Value thresholds for assets to be recorded in the asset register are determined, in accordance with company requirements

- 2 Record and value assets**
- 2.1 Specified details of all material assets are identified and recorded, in accordance with asset management policies and procedures
- 2.2 Assets are recorded in compliance with legislative and company requirements
- 2.3 Condition of each asset is determined, in accordance with manufacturer specifications, and legislative and company requirements
- 2.4 Useful/residual life of each asset is determined, in accordance with manufacturer specifications and company requirements
- 2.5 Current value of each asset based on valid and reliable information is calculated, in accordance with legislative and company requirements
- 3 Maintain asset management system**
- 3.1 Records are continuously updated to record asset purchases, loss, damage or disposal, in accordance with company requirements
- 3.2 Periodic audits are conducted to ensure accuracy of asset register, in accordance with company requirements
- 3.3 Asset management system is periodically reviewed to ensure it is supporting business needs, in accordance with company requirements
- 3.4 Training to support effective management and maintenance of the asset register is provided, in accordance with company requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIP5036A Manage assets.

# TLIPC1001 Demonstrate care and apply safe practices at work

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit covers the skills and knowledge required to demonstrate care and apply safe practices at work across a number of industries.

It includes following work health and safety (WHS)/occupational health and safety (OHS) procedures, maintaining personal wellbeing, reporting on safety of self and others and dealing with emergency situations. It may apply to WHS/OHS requirements and/or internal workplace policies and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

PC – Pathways Certificate

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Follow workplace WHS/OHS procedures**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Relevant WHS/OHS, workplace hazard control procedures and safe work practices are identified, interpreted and applied to work

- 1.2 Workplace procedures for reporting hazards are identified and adhered to in a prompt and efficient manner
  - 1.3 All relevant work activities are undertaken in a safe manner according to WHS/OHS guidelines, enterprise policies and procedures
  - 1.4 Work area is assessed regularly and procedures to report, remove or minimise potential hazards are followed
  - 1.5 Personal protection clothing and equipment is correctly used in accordance with established safety and workplace procedures
- 2 Maintain personal wellbeing in the workplace**
- 2.1 Risks to personal wellbeing that may affect safe performance in the workplace are identified and strategies to prevent them are put into place
  - 2.2 Procedures for maintaining a tidy and clean personal work area are identified, interpreted and followed
- 3 Be aware of and report on safety of self and others**
- 3.1 Situations that may endanger self or others are identified and corrected within scope of individual responsibility or reported
  - 3.2 Incidents and injuries to self or others on the job are dealt with in a timely manner and reported to appropriate persons
  - 3.3 Participative arrangements to foster safe working practices are contributed to, as appropriate
- 4 Deal with emergency situations**
- 4.1 Emergency situations are recognised and required action is taken within scope of individual responsibility
  - 4.2 Emergency procedures are followed in accordance with organisational procedures
  - 4.3 Assistance from colleagues and/or other authorities is sought where appropriate

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# TLIPC1002 Adapt to work requirements in the transport and logistics industry

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to adapt to work requirements in the transport and logistics industry, in accordance with relevant legislative and regulatory requirements.

It includes managing own learning, adapting and demonstrating appropriate work practices, working within organisational requirements, and identifying industry sectors, products and services.

This unit is an integrating unit because it provides an introduction to all transport and logistics industry sectors.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

PC – Pathways Certificate

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Manage own learning**

- 1.1 Personal goals or vision are considered and articulated
- 1.2 Opportunities for learning new ideas and techniques in relation to personal goals are identified
- 1.3 Personal learning needs and skill gaps are recognised
- 1.4 Opportunities for skills development activities are identified in liaison with relevant personnel
- 1.5 Range of learning tools and practices are accessed and applied to the job
- 1.6 Advantage is taken of on-the-job and off-the-job learning opportunities

**2 Adapt to and demonstrate appropriate work practice**

- 2.1 Work requirements are identified and interpreted with advice from appropriate persons
- 2.2 Appropriate dress and behaviour is observed in the workplace
- 2.3 Work and personal priorities are identified and a balance is achieved
- 2.4 Time management strategies are applied to work duties
- 2.5 Interactions with others is tailored to take into account different backgrounds, cultures and languages

**3 Work within organisational requirements**

- 3.1 Organisational requirements and key workplace activities are identified
- 3.2 Relevant workplace policies and guidelines are identified and applied to work undertaken
- 3.3 Range of organisational and industry values are identified
- 3.4 Uncertainties are discussed with key personnel and clarified

**4 Identify industry products and services**

- 4.1 Industry products are identified
- 4.2 Industry services are identified

4.3 Appropriate standards of customer service are identified across each industry sector

4.4 Quality standards for products and services as identified by the industry are clarified

## 5 Identify industry sectors

5.1 Main industry sectors, their key activities and the way in which they interrelate are identified

5.2 Industry sector roles and responsibilities are clarified

5.3 Industry representatives and their roles are clarified

5.4 Issues or events impacting on the industry are outlined

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIPC1002A Adapt to work requirements in the transport and logistics industry.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIPC1002 Adapt to work requirements in the transport and logistics industry

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting and modifying activities depending on differing workplace contexts and environments
- applying relevant industrial, workplace or other legislative requirements and procedures
- communicating effectively and using appropriate strategies when listening, questioning and receiving feedback
- recognising limitations, asking for help and seeking clarification or information about work requirements and procedures
- using time management strategies
- using workplace technology.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- current transport and logistics industry events, activities, products and services
- learning opportunities in the workplace
- time management strategies and appropriate workplace etiquette
- workplace equipment, tools and other technologies used in the transport and logistics industry, and where and how to obtain information and instructions on their safe use and basic care and servicing
- workplace policies, procedures and guidelines, including environmental sustainability aspects.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## TLIPC1003 Apply effective work practices

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit covers the skills and knowledge required to apply effective work practices across a number of transport and logistics industry sectors.

It includes planning, organising and completing work; communicating effectively; working with others; using workplace technology; solving problems and adapting to changes.

This unit is an integrating unit because it has applications across all transport and logistics industry sectors.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

PC – Pathways Certificate

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Plan, organise and complete daily work

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work instructions and priorities are identified and interpreted in consultation with supervisor

- 1.2 Appropriate work plan or daily routine is determined and mapped out
  - 1.3 Materials, resources or information needed to complete work is determined, collected, and organised
  - 1.4 Work tasks are completed within designated timelines, quality standards and instructions
  - 1.5 Problems that arise are dealt with in a practical, timely and appropriate manner and assistance is sought when required
  - 1.6 Feedback is sought on work performance
- 2 Communicate effectively**
- 2.1 Appropriate lines of communication with supervisors, colleagues and customers are identified
  - 2.2 Effective communication skills and numeracy skills are used to gather and convey information
  - 2.3 Appropriate non-verbal behaviour is demonstrated
- 3 Work with others**
- 3.1 Work roles of self and others in the workplace are identified
  - 3.2 Individual responsibilities and duties to the team are undertaken in a positive manner and in a range of situations to promote cooperation and good relationships
  - 3.3 Customers and colleagues are respected
- 4 Use workplace technology**
- 4.1 Appropriate workplace technology is selected and used in accordance with workplace and manufacturer guidelines and instructions
  - 4.2 Workplace technology is inspected to ensure it is not damaged and is working properly, and precautions are taken to reduce risks
  - 4.3 Appropriate action is taken when problems with workplace technology occur
  - 4.4 Workplace technology is cared for according to workplace and manufacturer guidelines and instructions
- 5 Solve work problems**
- 5.1 Problems are identified and practical or creative solutions are developed within scope of individual responsibility to rectify them
  - 5.2 Assistance is sought from key personnel as required

5.3 Workplace problems are reported using appropriate workplace procedures as required

## **6 Adapt to change**

6.1 New work requirements or situations are identified, clarified and adapted to

6.2 Range of possible practical or creative options to deal with workplace challenges are considered

6.3 Willingness to be open to and trial new ideas and techniques is demonstrated

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIPC1003A Apply effective work practices.

## **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIPC1003 Apply effective work practices

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting and modifying activities depending on differing workplace contexts and environment
- applying relevant industrial, workplace or other legislative requirements and procedures
- communicating effectively and using appropriate strategies when listening, questioning and receiving feedback
- completing required workplace tasks
- following relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and responsibilities
- identifying and correctly using equipment, tools and other technology required to complete workplace tasks
- interpreting and following a designated work plan or set of instructions for a job
- keeping required records of workplace activities
- planning daily routine and workplace tasks
- recognising limitations, asking for help and seeking clarification or information about work requirements and procedures
- responding appropriately to cultural differences in interactions with customers and colleagues
- taking initiative and using appropriate techniques to problem solve and to complete tasks
- working cooperatively and collaboratively with others to complete tasks.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic principles of teamwork in the workplace
- procedures for identifying and using relevant workplace technology when carrying out workplace calculations
- systems and equipment used in the workplace and the instructions, processes and precautions for their use
- typical problems in the workplace and appropriate action and solutions
- workplace procedures, policies and instructions
- workplace structures and the roles and responsibilities of individuals and team/group members.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIPC1004 Complete courier delivery operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit covers the knowledge and skills required to complete courier delivery operations.

It includes clarifying and organising courier operations, planning pick-up and delivery routes, picking-up items to be delivered to customers on time and to correct addresses, completing transactions with customers and maintaining records of courier delivery operations.

This unit is designed for use in a Pathways qualification or skill set. It should not be used in a qualification that has a direct job outcome.

This unit is an integrating unit because it has applications within a Pathways Certificate I aimed at providing entry level skills and knowledge in the area of courier and delivery operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

PC – Pathways Certificate

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Clarify and organise pick-up and delivery operations**
  - 1.1 Work requirements and specific customer needs are interpreted and clarified as required
  - 1.2 Pick-up and delivery points are located
  - 1.3 Size, weight and configuration of items to be delivered are identified and measured as required
  - 1.4 Resources required to facilitate pick-up and delivery are identified and prepared for use
- 2 Plan pick-up and delivery route**
  - 2.1 Pick-up and delivery route is planned based on an analysis of distance, travel times, customer requirements, resource implications and known priorities
  - 2.2 Items to be delivered are sorted accurately into route order
  - 2.3 Items to be delivered are handled in a manner that minimises the risk of damage
  - 2.4 Special items are identified accurately
  - 2.5 Items to be delivered are organised into bundles and kept in sequence for delivery
  - 2.6 Items to be delivered are handled securely
- 3 Pick-up items to be delivered**
  - 3.1 Items are picked up within specified times
  - 3.2 Items are kept secure to minimise the risk of damage, theft, misdelivery and loss
  - 3.3 Contact with customers is conducted courteously and in a manner that encourages customers to continue to use the pick-up and delivery services
- 4 Deliver items to correct addresses**
  - 4.1 Deliveries are completed within specified times
  - 4.2 Items are kept secure to minimise the risk of damage, theft, misdelivery and loss
  - 4.3 Items requiring special treatment are delivered as specified and relevant documentation is completed accurately
  - 4.4 Contact with customers is conducted courteously and in a manner that encourages customers to continue to use the pick-up and delivery services
- 5 Complete transactions with customers**
  - 5.1 Amount owing is noted from the delivery advice or invoice and customer is advised

- 5.2 Transactions are completed as required, in accordance with workplace policies and procedures
  - 5.3 Cash transaction amount tendered is checked, and correct change is calculated and given
- 6 Maintain records of courier delivery operations**
- 6.1 Incidents involving customers that occur, or hazards identified during delivery, are reported accurately to the relevant person/section
  - 6.2 Undelivered and undeliverable items are processed in accordance with workplace policies and procedures
  - 6.3 Documentation and records are completed, checked for accuracy and given promptly to the appropriate person

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIPC1004A Complete courier delivery operations.

# Assessment Requirements for TLIPC1004 Complete courier delivery operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting and modifying pick-up and delivery activities depending on workplace contexts, resources and environment
- applying relevant legislation and workplace procedures
- communicating effectively and using appropriate strategies when listening, questioning and receiving feedback
- communicating effectively verbally and in writing as required for courier pick-up and delivery operations
- completing calculations required for transactions when completing pick-up and delivery operations
- following relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and responsibilities including safe lifting and carrying procedures
- identifying and correctly using mobile phones and other equipment and technology required to complete pick-up and delivery tasks
- interpreting and following a set of instructions for a pick-up and delivery operations
- keeping required records of pick-up and delivery operations
- planning a route and schedule to complete required workplace tasks
- recognising limitations and asking for help or information about work requirements and procedures
- responding appropriately to cultural differences in interactions with customers and colleagues
- taking appropriate initiative to deal with problems and to complete tasks
- using appropriate techniques to solve or report problems identified when completing pick-up and delivery operations
- working cooperatively and collaboratively with others to complete pick-up and delivery tasks.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic mathematical operations and techniques needed to plan pick-up and delivery routes and schedules, and to complete financial transactions involved
- pick-up and delivery procedures, policies and instructions
- procedures for identifying and using relevant workplace technology when carrying out workplace calculations
- relevant workplace standards and duty of care requirements
- safe lifting and carrying policies and procedures
- systems and equipment used during pick-up and delivery processes and instructions, processes and precautions for their use
- typical mathematical problems involved in courier delivery operations and appropriate action and solutions.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIPC1005 Complete small store operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit covers the skills and knowledge required to complete small store operations across all transport and logistics industry sectors.

It includes organising and completing small store operations such as stocktaking, ordering, receiving and despatching goods, and maintaining inventory or records of a small store.

This unit is designed for use in a pathways qualification or skill set. It should not be used in a qualification that has a direct job outcome.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

PC – Pathways Certificate

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Organise small store operations

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Small store work requirements and specific internal or external customer requirements are interpreted and small store operations are organised accordingly

- 1.2 Inventory or stocktake of goods or items held in the small store is conducted in accordance with workplace requirements
  - 1.3 Levels of goods and items in stock are monitored and maintained at levels prescribed by store procedures
  - 1.4 Orders for the replenishment of goods or items in the small store are made in accordance with store procedures
- 2 Complete small store operations**
- 2.1 Incoming goods and items are received and checked against orders and relevant specifications
  - 2.2 Received goods and items are stored in accordance with small store procedures
  - 2.3 Goods and items for issue are picked and despatched in accordance with the small store procedures
- 3 Maintain small store records**
- 3.1 Inventory or records of stocks held in the small store are kept in accordance with workplace procedures
  - 3.2 Dockets and receipts for received goods are correctly completed
  - 3.3 Discrepancies or identified damage in received goods are recorded and reported in accordance with workplace procedures
  - 3.4 Records of goods or items issued from the small store are completed in accordance with workplace procedures
  - 3.5 Discrepancies in the inventory or record of stocks held are identified and reported in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIPC1005A Complete small store operations.

## **TLIR4001 Monitor supplier performance**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to monitor the performance of contracted suppliers of goods/materials/services in compliance with workplace procedures and requirements.

It includes administering supplier contract, assessing for conformity to contracted requirements and completing all required contract documentation.

Work is performed under general guidance on progress and outcomes of work. It involves discretion and judgement for self and others in monitoring supplier performance.

Work involves responsibility for resource coordination and allocation, and for leading individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

R – Contract Procurement

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Administer supplier contract**

- 1.1 Procedures for receiving supplied goods/materials/services are documented and implemented within the workplace
- 1.2 Supplied goods/material/services are assessed for conformity to contracted requirements including price, quantity, quality and delivery schedules
- 1.3 Non-conformance of supplier with contracted requirements is accurately detailed
- 1.4 Actions to rectify non-conformance are undertaken in accordance with enterprise procedures and within scope of authority
- 1.5 Issues of non-conformance beyond scope of authority are referred to designated personnel in accordance with enterprise operating procedures

### **2 Complete documentation**

- 2.1 Annotations and performance assessment/evaluations are completed and appended to supplier file
- 2.2 Action taken in regard to non-conformance of contracted requirements is documented and appended to supplier file
- 2.3 System records are maintained and updated in accordance with enterprise information management system and required regulatory requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIR4001A Monitor supplier performance.

# Assessment Requirements for TLIR4001 Monitor supplier performance

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- Administering supplier contract
- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- Contract non-conformance
- interpreting data and providing appropriate, timely information on data analysis outcomes to appropriate personnel
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures and information
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and appropriately applying technology, information systems and procedures
- working systematically with required attention to detail.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- focus of operation of recording, reporting and statistical analysis systems and resources
- relevant regulatory and code requirements
- typical problems that can occur with supply contracts and related appropriate action that

can be taken

- workplace business policies and plans as they relate to supply contracts, including procedures for maintaining confidentiality
- workplace contract performance and disputation policies and procedures
- workplace protocols and procedures for monitoring supply contractor performance.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

## **TLIR4002 Source goods/services and evaluate contractors**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to source goods/services and to evaluate contractors in accordance with workplace policy and procedures.

The unit generally applies to those with responsibility for resource coordination and allocation and who lead individuals or teams.

It includes analysing supply requirements as well as evaluating and selecting appropriate potential contractors.

This unit involves discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

Work is performed under general guidance on progress and work outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

R – Contract Procurement

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Analyse supply requirements**

- 1.1 Purpose and specifications of required goods/services are identified
- 1.2 Criteria to evaluate potential or existing contractor performance is established
- 1.3 Quantities of required goods/services are determined
- 1.4 Frequency of ordering/requesting of goods/services is identified

### **2 Evaluate potential contractors**

- 2.1 Contractors of requested goods/materials/services are identified
- 2.2 Comparative costings for goods/materials/services are obtained
- 2.3 Contractor ability to provide a consistent level of performance on repeat jobs is assessed
- 2.4 Contractors are evaluated in relation to established criteria and in accordance with workplace and regulatory procedures
- 2.5 Prioritised contractor shortlist is established based on contractor capacity to provide a cost competitive quality service
- 2.6 Contractor selection process outcomes are documented including recommendations for actioning agreements/contracts with selected contractors
- 2.7 Information and data generated during selection process is filed and maintained in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## TLIR4003 Negotiate a contract

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to contract transport and logistics services in compliance with relevant regulations, standards, legal requirements, codes of practice and workplace procedures.

It includes negotiating the contract, finalising the contract negotiations, as well as completing all contract requirements with a contractor.

The unit generally applies to those with responsibility for resource coordination and allocation, and who lead individuals or teams.

Work is under general guidance on progress and outcomes. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

R – Contract Procurement

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

### **1 Negotiate contract specifics with contractor**

1.1 Requirements of the contract are clearly documented and agreed to by the relevant parties

1.2 Areas of ambiguity or concern are clarified and resolved

1.3 Negotiations are undertaken with selected contractor for the contracting of required goods/services on a 'without prejudice' basis

1.4 Conditions for service and/or supply of goods/services are agreed between the enterprise and the contractor including the determination of key performance indicators

1.5 Alternative contractors are negotiated with if agreement is unable to be reached with preferred contractor

1.6 Contract negotiations are conducted in accordance with established workplace requirements and relevant legislation

### **2 Complete contract negotiations**

2.1 Contract documentation is drafted in accordance with relevant legislation, workplace procedures and negotiated conditions of service and supply

2.2 Technical support in drafting contracts is accessed as required

2.3 Contract documentation is signed and exchanged between relevant parties

### **3 Complete enterprise contract requirements**

3.1 Documentation systems are established to ensure traceability of orders and financial transactions

3.2 Workplace systems that require interaction with contractors are identified and actioned

3.3 Quality assurance procedures for supplied goods/services are initiated

3.4 Contract and ancillary documentation is completed and stored as required, in accordance with workplace procedures and regulatory requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIR4003A Negotiate a contract.

# Assessment Requirements for TLIR4003 Negotiate a contract

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate risks that may exist when negotiating a contract
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when negotiating a contract
- completing documentation related to negotiating a contract
- modifying activities to cater for variations in workplace contexts and environment
- operating electronic communications equipment to required protocol
- planning and monitoring work activities in terms of schedule
- prioritising work and coordinating self and others in relation to workplace activities
- providing leadership and working collaboratively with others when negotiating a contract
- reading, interpreting and following instructions, procedures and regulatory requirements relevant to negotiating a contract
- selecting and applying appropriate technology and information systems.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and the range of conditions on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate risks that may exist when negotiating a contract
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when negotiating a contract
- completing documentation related to negotiating a contract
- modifying activities to cater for variations in workplace contexts and environment
- operating electronic communications equipment to required protocol
- planning and monitoring work activities in terms of schedule
- prioritising work and coordinating self and others in relation to workplace activities
- providing leadership and working collaboratively with others when negotiating a contract
- reading, interpreting and following instructions, procedures and regulatory requirements relevant to negotiating a contract
- selecting and applying appropriate technology and information systems.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIR4008 Implement and supervise stocktaking procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to implement and supervise stocktaking procedures in various contexts within the transport and logistics industry.

It includes monitoring and maintaining stock records, implementing stocktaking and stock rotation processes, and identifying stock losses.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

R – Contract Procurement

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Maintain stock records

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Stock levels and records are monitored and maintained at required levels

1.2 Stock reorder cycles are monitored, maintained and adjusted as required

- 1.3 Stock storage and movement records are maintained in accordance with organisational policy
- 2 Implement stocktaking and stock rotation processes**
- 2.1 Relevant policies and procedures for stocktaking and cyclical counts are interpreted and explained to team members
  - 2.2 Stocktaking tasks are allocated to individual team members
  - 2.3 Team members are provided with clear directions for the performance of each task and supervised
  - 2.4 Stocktaking and stock rotation procedures are implemented
- 3 Identify stock losses**
- 3.1 Losses are accurately identified, recorded and assessed against potential loss forecast on a regular basis
  - 3.2 Avoidable losses are identified and potential reasons are established
  - 3.3 Possible solutions to avoidable losses are recommended and implemented
  - 3.4 Accurate reports on stocktake data, including discrepancies, are produced for management

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIR4008A Implement and supervise stocktaking procedures.

# TLIR4009 Implement purchasing systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to implement purchasing systems in various contexts within the transport and logistics industry.

It includes identifying purchasing requirements, sourcing purchases, checking costings and arranging the purchase of materials.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

R – Contract Procurement

## Unit Sector

Not applicable.

## Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
<b>1 Identify purchasing requirements</b>	1.1 Purchasing requirements are identified from orders and instructions in accordance with workplace procedures  1.2 Quantities, quality of goods, price limitations and delivery requirements are determined or confirmed in consultation with

appropriate personnel

- 2 Source purchase**
- 2.1 Source/s of materials are identified from workplace preferred supplier lists or through networks and knowledge of local and/or overseas suppliers
  - 2.2 Supplier/vendor is advised of requirements and specifications in accordance with site requirements
  - 2.3 Availability of supply is confirmed
  - 2.4 Difficulties in supply are reported in accordance with workplace procedures
- 3 Check costings**
- 3.1 Alternative suppliers are contacted to check different costings
  - 3.2 Actual costs are compared to predicted costs
  - 3.3 Recommendations regarding alternative suppliers are communicated to appropriate personnel in accordance with workplace procedures
  - 3.4 All records/reports are maintained in accordance with site requirements
- 4 Purchase materials**
- 4.1 Capacity of supplier to meet price, quality and delivery expectations is confirmed
  - 4.2 Order is placed with supplier and delivery schedules are confirmed
  - 4.3 Appropriate orders and invoices are exchanged in accordance with workplace procedures
  - 4.4 Materials are checked/inspected on receipt in accordance with site requirements in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## TLIR5005 Manage a contract

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to manage a contract in various contexts within the transport and logistics industry.

It includes confirming contract requirements, establishing a contract management system, and monitoring and evaluating the contract.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

R – Contract Procurement

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Confirm contract requirements

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Relevant parties are consulted to identify their contract requirements

1.2 Special provisions needed are identified

- 1.3 Need for specialist legal advice is identified and advice is obtained as required
  - 1.4 Key performance outcomes and measures are specified for inclusion in contract
  - 1.5 Relationship with contractor is established in accordance with organisational policies and procedures
- 2 Establish contract management system**
- 2.1 Effective communication/information strategies are established
  - 2.2 Dispute and complaint system is established in accordance with organisational policies and procedures
  - 2.3 Consistent and accurate records of contract progress are maintained
  - 2.4 Management strategy is documented, monitored for effectiveness and adapted as required during the life of the contract
- 3 Monitor contract**
- 3.1 Regular inspections of contract services are undertaken to ensure compliance with specifications
  - 3.2 Relationship with contractor is managed in accordance with organisational policies and procedures
  - 3.3 Regular planned progress meetings are conducted and documented between all contract personnel to ensure problems are identified, resolved early and documented
  - 3.4 Variations between specified scope of services and contract are identified and documented, and relevant personnel are notified without delay
  - 3.5 Contract costs are monitored on a regular basis to ensure service is carried out within financial and contractual requirements
  - 3.6 Payments for contract services are authorised in accordance with contract conditions and organisational contract administrative system
- 4 Evaluate contract**
- 4.1 Evaluation of contract performance is undertaken relative to planned performance measures and in consultation with stakeholders and suppliers
  - 4.2 Conclusions are detailed against agreed criteria and a complete picture of supplier performance, organisational procurement processes and value for money is provided

4.3 Evaluation is documented in accordance with organisational requirements to assist improvement in future procurement activities

4.4 Relevant parties are advised of evaluation outcomes in a timely manner in accordance with organisational guidelines

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIR5005 Manage a contract

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and communicating effectively with others when managing a contract
- completing documentation related to contract management, including reports relevant to deliverables of stages and completion
- modifying activities depending on operational contingencies, risk situations and environments, and negotiating modifications with the contractor or agent as required
- monitoring and prioritising work activities in terms of planned schedule
- negotiating solutions to problems as they arise during the contract timeframe
- operating electronic communications equipment to required protocol
- reading and interpreting instructions, procedures, information and the contract itself.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- confidentiality issues in relation to contracted services such as intellectual property
- disposals considerations
- equal employment opportunity and anti-discrimination law
- ethical issues
- financial and accounting issues relevant to the contract
- financial management of a contract including negotiating price variations during the contract
- organisational purchasing policies and practices
- performance management in terms of identifying and managing contract compliance
- procedures for acceptance of goods or services

- procedures for operating electronic communications equipment
- procurement approval processes
- procurement negotiation practices, including legal aspects
- relevant sections of national and state/territory regulatory requirements and codes of practice related to procurement, including contract law, trade practices law and commercial law to a level sufficient to be able to manage the performance of a contractor
- requirements for completing relevant documentation.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIR5006 Develop, implement and review purchasing strategies

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to develop, implement and review an organisation's purchasing strategies in various contexts within the transport and logistics industry.

It includes determining, developing, implementing and evaluating purchasing objectives and strategies, and implementing improvements.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

R – Contract Procurement

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Determine purchasing objectives

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Industry benchmarks for purchasing are researched and analysed for organisational suitability

1.2 Organisation's purchasing data and information are

analysed

1.3 Consultations are undertaken with relevant stakeholders and personnel to inform development of purchasing objectives

1.4 Purchasing objectives are drafted in line with organisational goals

1.5 Approval is gained from relevant personnel for purchasing objectives

## **2 Develop purchasing strategies**

2.1 Purchasing strategies are developed, taking into account legal requirements and purchasing objectives

2.2 Five Rights are included in purchasing criteria

2.3 Human resources, financial and other plans are developed to support the implementation of purchasing strategies

2.4 Approval is gained to implement plans and purchasing strategies

2.5 Changes resulting from approval processes are made to plans and strategies, as required

## **3 Implement purchasing strategies**

3.1 Purchasing strategies are communicated to relevant personnel and stakeholders

3.2 Resources needed to implement purchasing strategies are identified and accessed

3.3 Support is provided to implement purchasing strategies

3.4 Implementation of purchasing strategies by the organisation is monitored

3.5 Problems and issues arising during implementation are identified and addressed

3.6 Reports are provided to relevant personnel and stakeholders on implementation of purchasing strategies

## **4 Evaluate purchasing strategies and implement improvements**

4.1 Implementation of purchasing strategies is reviewed

4.2 Improvements to purchasing strategies are identified

from review process

- 4.3 Approval is gained to implement improvements to purchasing strategies
- 4.4 Improvements are communicated to relevant stakeholders and support is provided to implement improvements
- 4.5 Implementation of improvements is monitored and reviewed to determine effectiveness of improvements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIR5006 Develop, implement and review purchasing strategies

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others when developing, implementing and reviewing purchasing strategies, including consulting and negotiating with stakeholders, writing policies and procedures, and supporting staff to implement strategies
- developing human resources, financial and other plans when developing, implementing and reviewing purchasing strategies
- identifying and addressing problems relating to developing, implementing and reviewing purchasing strategies
- monitoring, reviewing and evaluating purchasing strategies
- planning and prioritising work activities, and researching and analysing data
- preparing reports appropriate to developing, implementing and reviewing purchasing strategies
- reading and interpreting instructions, procedures and information relevant to work activities.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- concept of the 'Five Rights':
  - right price
  - right quality
  - right quantity
  - right supplier
  - right time

- information about industry benchmarks for purchasing, including information from peak bodies, industry associations and Australian standards
- organisational policies and procedures related to purchasing; contracting and tendering; business terms and conditions for purchasing, tendering and contracting; and ethical behaviour
- product knowledge related to goods and services required by the organisation
- relevant legislation, codes of practice, national and international standards, such as Trade Practices Act, contract law, sale of goods legislation, and legislation related to the import of goods and services.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIR5007 Manage international purchasing

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to manage international purchasing of specific goods in accordance with workplace policies and procedures, and regulatory frameworks, in various contexts within the transport and logistics industry.

It includes developing, documenting and implementing regular and complex international purchasing strategies, determining payment strategies, arranging barter or counter trading and determining logistics strategies. It also includes evaluating international purchasing strategies and implementing identified improvements.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

R – Contract Procurement

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Develop and document strategies for international purchasing**
  - 1.1 Strategic implications for international purchasing are researched and analysed
  - 1.2 International market structures are researched
  - 1.3 Export requirements of supplier country are researched and analysed
  - 1.4 Strategies for international purchasing are drafted and submitted for approval
  
- 2 Implement international purchasing strategies**
  - 2.1 International purchasing strategies are communicated to relevant personnel and stakeholders
  - 2.2 Support is provided to stakeholders to implement international purchasing strategies
  - 2.3 Implementation of international purchasing strategies is monitored
  - 2.4 Problems and issues arising from implementation of international purchasing strategies are identified and addressed
  
- 3 Undertake more complex international purchasing**
  - 3.1 Export markets and cultural considerations having a potential impact on international purchasing are researched and appropriate markets are chosen
  - 3.2 International legal requirements on sale of goods and Australian regulatory controls applicable to imports into Australia are researched and applied as appropriate
  - 3.3 Relevant Incoterms and trade terms are applied
  - 3.4 Exception clauses to business conditions are drafted
  - 3.5 Discrepancies are clarified and resolved to the satisfaction of all parties
  
- 4 Determine payment strategies**
  - 4.1 Financial risk management is analysed and available controls are implemented
  - 4.2 Source and availability of funds for payment are identified
  - 4.3 Currency payment methods – hedging, letters of credit, and payment by cheque upon/after shipment

– are researched and analysed

4.4 Currency payment methods appropriate to the situation are selected

4.5 Expenditure phasing is planned and implemented

## **5 Arrange barter or countertrade**

5.1 Strategic implications of arranging specific barter or countertrade are researched and analysed

5.2 Suppliers willing to engage in international barter or countertrade are determined

5.3 Commercial conditions for proposed barter or countertrade are negotiated, and agreement is reached with partners

5.4 Draft contract is prepared and legal expertise is accessed to check legality of contract agreement

5.5 Contracts are approved and issued

## **6 Determine logistics strategies**

6.1 Requirements for pre-shipment inspection are ascertained and arrangements are made

6.2 Shipping and other transport risks and facilities are researched and analysed

6.3 Regulatory compliance requirements for importation into Australia are researched and analysed

6.4 Logistics strategies for the organisation are developed to take account of appropriate transport, insurance and regulatory compliance requirements

6.5 Approval is gained from relevant personnel for implementation of logistics strategies

## **7 Evaluate international purchasing strategies and implement identified improvements**

7.1 Implementation of international purchasing strategies is reviewed

7.2 Improvements to international purchasing strategies are identified from the review process

7.3 Approval is gained to implement improvements to international purchasing strategies

7.4 Changes are communicated to relevant stakeholders and support is provided to implement

improvements

7.5 Implementation of changes is monitored and reviewed to determine effectiveness of improvements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIR5007 Manage international purchasing

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others when managing international purchasing
- completing documentation related to work activities
- developing, implementing, managing and evaluating international purchasing strategies
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading and interpreting instructions, procedures, information and signs relevant to work activities
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements performance criteria and include knowledge of:

- agencies involved in arranging importation such as customs brokers, freight forwarders, logistics and transport companies and consultants
- commonwealth/state/territory government procurement guidelines
- contracting requirements
- disposals considerations
- equal employment opportunity, equity and diversity principles and legislation
- ethical issues
- financial and accounting issues relevant to the contract
- Incoterms
- international markets and cultural considerations relevant to purchasing in supplier countries
- legal aspects of negotiation
- legal considerations
- legislation, codes of practice and national standards including the Trade Practices Act, contract law, commercial law, quarantine legislation
- methods of payment applicable to international purchasing including barter and countertrade
- organisational procurement policies and practices for international purchasing
- procedures for accepting goods or services
- procurement approval processes
- procurement negotiation practices
- relevant insurance brokers and types of policies to cover risks
- relevant sections of national and state/ territory regulatory requirements and codes of practice relating to restrictions and prohibitions on imports
- requirements for completing relevant documentation
- source of information and assistance external to the organisation such as regulatory authorities, customs brokers, Austrade, state/territory government departments or agencies, chambers of commerce
- whole-of-life considerations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

## TLIR5014 Manage suppliers

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to manage suppliers in various contexts within the transport and logistics industry.

It includes assessing and building productive relationships with suppliers, and evaluating the delivery of goods/services against agreements. It also includes negotiating arrangements, resolving disagreements with suppliers and reviewing supplier performance.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

R - Contract Procurement

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Assess suppliers and build productive relationships

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Criteria to effectively evaluate supplier services are developed and documented

1.2 Existing suppliers are assessed against criteria

- 1.3 Availability and suitability of alternate suppliers who can meet the service support requirements within legislative requirements are identified
  - 1.4 Terms and conditions of suppliers to achieve service requirements are established and communicated
  - 1.5 Cooperative relationships are developed with suppliers in accordance with organisational policies and procedures
- 2 Evaluate delivery of goods and/or services against agreements**
- 2.1 Quality of goods and services supplied is assessed against criteria
  - 2.2 Non-compliance is identified, documented and corrective action is implemented within the terms of contractual arrangements
  - 2.3 Contingency plans are developed should suppliers fail to deliver
  - 2.4 Relationships with suppliers are managed to support effective delivery
- 3 Negotiate arrangements with suppliers**
- 3.1 Arrangements with suppliers are negotiated and implemented in accordance with organisational policies and procedures
  - 3.2 Market factors that may affect the supply of goods and services are identified and communicated to relevant personnel
  - 3.3 Immediate corrective action is taken in consultation with suppliers where potential or actual problems are indicated
- 4 Resolve disagreements with suppliers**
- 4.1 Disagreements with suppliers are investigated to identify validity and causes
  - 4.2 Disagreements are negotiated and resolved
  - 4.3 Amendments to agreements, as a consequence of the resolution of disagreements, are documented
  - 4.4 Approval is sought and obtained for amendments
  - 4.5 Approved amendments are communicated to suppliers and relevant personnel

## 5 Review performance of suppliers

- 5.1 Suppliers are continuously reviewed for quality, profitability, service, delivery status and other relevant performance indicators
- 5.2 Supplier performance is evaluated against purchasing agreement requirements
- 5.3 Suppliers are informed of evaluation outcomes as required
- 5.4 Recommendations about future use of suppliers are made to relevant personnel
- 5.5 Suppliers are deleted from supplier shortlist according to criteria

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIR5014A Manage suppliers.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIR5014 Manage suppliers

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others when managing suppliers
- completing documentation related to work activities
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading and interpreting instructions, procedures, information and signs relevant to managing suppliers
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- sourcing, managing, evaluating and reviewing suppliers.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- code of practice for working collaboratively with others
- common use arrangements
- contract performance and dispute policies and procedures
- financial accountability requirements
- operation of recording, reporting and statistical analysis systems and resources
- organisational policies, procedures, plans, guidelines and code of conduct relevant to procurement and supply contracts
- organisational procedures for monitoring the performance of suppliers

- probity requirements and ethical issues
- procedures for operating electronic communications equipment
- procedures for receipt and payment of goods and services
- procurement approval procedures
- relevant sections of national and state/territory regulatory requirements and codes of practice related to procurement
- requirements for completing relevant documentation
- steps involved in planning the work activities
- suppliers in the marketplace.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIS2004 Install and maintain rail bonding systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to install and maintain all types of temporary and permanent bonds and bonding cables in use in the Australian rail system, in accordance with safeworking and regulatory requirements, and workplace procedures.

This includes planning the installation and maintenance, preparing the worksite, installing and maintaining the bonds and bonding cables, and conducting all required post-installation activities as a non-electrical rail safety worker.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rail industry standards and/or guidelines.

Work is performed under some supervision, generally within a team environment.

Rail bonding systems involve the application of routine operational principles and procedures when fixing cable across a break or joint in one rail, or between two rails to provide a path for traction return current or track-circuits, as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Plan the installation and maintenance of the relevant bonding systems**

1.1 Works order including drawings, plans and material lists is received/accessed, analysed and confirmed as required by site inspection

1.2 Work is assessed and prioritised in accordance with works scheduled

1.3 Site relevant electrical permits are accessed and/or obtained as required

1.4 Hazards are identified, risks are assessed and control measures are implemented

1.5 Resources including personnel, plant, equipment and tools are identified and scheduled

1.6 Liaison and communication issues with other personnel, authorities, clients and landowners are resolved

### **2 Prepare the worksite**

2.1 Personnel participating in the task, including plant operators and contractors, are fully briefed

2.2 Site preparation is completed in accordance with works order

2.3 Specialist testing and earth equipment is inspected as required and replaced if defective

2.4 Road signs, barriers and warning devices are positioned as required

2.5 Safeworking practices are observed on or about the running track/line

### **3 Install and maintain bonding system cables**

3.1 Systems and circuits are isolated as required, proved safe to work on in accordance with work plan and electrical permits are issued/accepted/relinquished as required

- 3.2 Cable and surrounds, including rail and other surfaces, are prepared to appropriate specifications
- 3.3 Bonds are attached in accordance with specifications
- 3.4 Joint and termination procedures are carried out in accordance with authorised work procedures
- 3.5 Continuity testing procedures are carried out as required
- 3.6 System is commissioned following visual inspection and the completion of other testing

#### **4 Conduct post-operational activities**

- 4.1 Worksite is rehabilitated in accordance with workplace procedures
- 4.2 Work is completed in an agreed time and with minimum waste
- 4.3 Notifications, records and documentation for updating system data are completed

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIS2004A Install and maintain rail bonding systems.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIS2004 Install and maintain rail bonding systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- applying relevant safeworking and workplace procedures
- communicating effectively with others
- completing relevant documentation
- guiding operators of plant and equipment and using appropriate signals when installing and maintaining cables
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- organising activities in accordance with workplace procedures
- reading and interpreting relevant technical data, drawings, instructions and manuals
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- selecting and using relevant equipment and tools
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- characteristics, capabilities and uses of various types of cables
- circuits for signalling and communications systems awareness as a non-electrical rail safety worker
- current capacities, inductance and capacitance, protection systems and devices
- electrical hazard awareness including voltage and current transformation, voltage drop, cable and traction systems
- joint test and fault identification/location workplace procedures
- problems that may occur when installing and maintaining rail bonding systems and action that can be taken to report or resolve these problems
- rail industry standards for installing and maintaining rail bonding systems
- switching operation, isolation and access permit procedures
- testing and commissioning procedures, including testing and earth/rail connecting conductors
- traction earthing systems and bonding systems
- work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace documentation and records systems
- workplace procedures for installing and maintaining rail bonding systems for non-electrical rail safety workers.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIS2012 Install and service rail lubrication equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to install and service rail lubrication equipment in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes installing the lubrication equipment, servicing and monitoring the lubrication equipment, removing lubrication equipment and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures when installing and servicing rail lubrication equipment, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Install lubricator

- 1.1 Work location is identified
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Rail is correctly prepared at lubrication site to enable correct fitting of lubricator
- 1.4 Lubricator is installed and tested to ensure correct functionality in accordance with workplace procedures

### 2 Service and monitor lubricator

- 2.1 Lubricator is cleaned and correctly adjusted to ensure correct functionality
- 2.2 Parts are replaced as required to ensure correct functionality
- 2.3 Lubricator is filled with appropriate lubricant
- 2.4 Lubricator is checked and adjusted to maintain correct functionality

### 3 Remove lubricator

- 3.1 Preparations for the removal of the lubricator are made in accordance with workplace procedures
- 3.2 Lubricator is correctly removed and stowed in accordance with workplace procedures

### 4 Complete documentation

- 4.1 Required documentation procedures and processes are confirmed
- 4.2 Documentation is filled in legibly and proofread
- 4.3 Documentation is processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIS2012A Install and service rail lubrication equipment.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIS2012 Install and service rail lubrication equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with workplace operating procedures
- adjusting the pump to supply optimum grease delivery or replacing a gasket set
- applying relevant workplace procedures
- checking compliance of work with job specifications
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and performing work in correct sequence
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant technical data, instructions and manuals
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- selecting and using relevant equipment and tools
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of relevant equipment, materials, structures, hardware and components
- hazardous situations and related personal protection measures
- hazards that may exist when installing and servicing rail lubrication equipment, and ways of controlling the risks involved
- mechanical processes involved in installing and servicing rail lubrication equipment
- principles of rail lubrication and lubrication equipment
- problems that may occur when installing and servicing rail lubrication equipment, and action that can be taken to report or resolve these problems
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant rail industry standards, workplace technical manuals and instructions
- workplace procedures for installing and servicing rail lubrication equipment.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

## **TLIS2013 Install minor structures**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to install minor non-track bearing structures and assemblies in rail industry contexts, in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes planning and preparing for installation, installing the structure in accordance with workplace requirements and cleaning up the site after installation.

People achieving competence in this unit will need to fulfil applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally in a team environment.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

S – Construction and Installation

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Plan and prepare for work**

- 1.1 Type of structure to be installed is identified and appropriate methods are planned in accordance with workplace procedures and specifications
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Structure and/or materials required for installation are identified, obtained and prepared in accordance with plans and specifications

### **2 Assemble and install structural elements**

- 2.1 Excavation is conducted as required, in accordance with workplace standards, procedures and regulatory requirements
- 2.2 Foundations are installed as required, in accordance with workplace procedures and specifications
- 2.3 Components are assembled and installed using appropriate methods in accordance with specifications and/or plans
- 2.4 Level/position of structure is adjusted to required standard to maintain correct track geometry/clearances
- 2.5 Fasteners are installed and tightened in position using correct fastening method to ensure structural integrity
- 2.6 Installed structure is checked against specified requirements and/or plans, and required adjustments are made

### **3 Maintain structures**

- 3.1 Components requiring replacement are checked against standards and are measured for preparation of replacement components
- 3.2 Materials required for job are identified and organised as required to enable appropriate replacement of components
- 3.3 Replacement components are cut and shaped to required standard in accordance with workplace procedures
- 3.4 Surfaces of components are treated using appropriate methods and materials as required

### **4 Finalise work**

- 4.1 Site is cleaned up to remove unnecessary materials and is restored to environmentally sound and safe condition

- 4.2 Work is executed and documentation is completed and processed as required in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIS2013C Install minor structures.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIS2013 Install minor structures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- applying relevant workplace procedures
- checking compliance of work with job specifications
- cleaning up the site after installation
- following operational instructions and work sequences
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- installing the structure in accordance with workplace requirements
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- planning and preparing for installation
- reading and interpreting relevant plans, specifications, instructions and manuals
- reporting and rectifying problems, faults and malfunctions that may occur when installing minor structures in accordance with workplace procedures
- selecting and using relevant equipment and tools.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- construction methods and techniques for minor structures
- functions of different types of minor structures
- hazards that may exist when installing minor structures, and ways of controlling the risks involved
- problems that may occur when installing minor structures and action that can be taken to

report or resolve these problems

- relevant rail danger zones
- relevant recording and documentation procedures
- relevant rail industry standards for installing minor structures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and workplace procedures and information on the use of epoxy and grouts for mortar pads
- workplace procedures for installing minor structures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in appropriate range of situations in the rail corridor workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, SDSs/MSDSs, rail industry standards, codes of practice and operation manuals.

# TLIS2020 Install overhead wiring structure

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to install overhead wiring structures in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes planning and preparing for installation, installing the required components to specification and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Plan installation

- 1.1 Work requirements are determined to identify scope of work and resources required
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Type of overhead wiring structure required for job is identified and organised

### 2 Prepare for installation

- 2.1 Footings are prepared and excavated in accordance with rail industry standards and workplace procedures
- 2.2 Formwork is installed in accordance with rail industry standards and workplace procedures
- 2.3 Concrete reinforcing is installed in accordance with rail industry standards and workplace procedures
- 2.4 Concrete is mixed and placed in accordance with rail industry standards and workplace procedures
- 2.5 Hold down plates/bolts are placed into concrete to correct dimensions to enable fitting of overhead wiring structure

### 3 Install components

- 3.1 Components are assembled onto bridge section as required in preparation for installation
- 3.2 Masts and other components are positioned and installed as required in accordance with accepted workplace procedures
- 3.3 Fastening systems are installed in accordance with rail industry standards to ensure the integrity of the overhead wiring structure

### 4 Complete documentation

- 4.1 Required documentation procedures and processes are confirmed
- 4.2 Documentation is filled in legibly and proofread
- 4.3 Documentation is processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIS2020A Install overhead wiring structure.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIS2020 Install overhead wiring structure

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- checking compliance of work with job specifications
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- installing overhead wiring structures
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- planning own work including predicting consequences and identifying improvements
- reading and interpreting relevant technical data, drawings, instructions and manuals
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements, rail industry standards and workplace procedures
- selecting and using relevant equipment and tools in accordance with workplace procedures
- using levelling equipment in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- characteristics and relevant information on overhead wiring structures
- characteristics of plant and equipment, materials, transport, structures, hardware and components used in work activities
- emergency management plan
- hazardous situations and related personal protection measures
- hazards that may exist when installing overhead wiring structures and ways of controlling the risks involved
- problems that may occur when installing overhead wiring structures and action that can be taken to report or resolve these problems
- relevant earthmoving equipment and methods
- relevant information in workplace technical manuals and instructions
- relevant rail danger zones
- relevant rail industry standards
- relevant recording and documentation procedures
- relevant safeworking system and workplace procedures
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace procedures for installing overhead wiring structures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

# TLIS2027 Install and maintain surface track drainage

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to install and/or maintain surface track drainage manually and mechanically in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes determining the job requirements, carrying out the maintenance of track drainage in accordance with work orders and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when installing and maintaining surface track drainage maintenance, as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Determine job requirements

- 1.1 Worksite is identified
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Underground services are identified as required and marked to protect services from excavation
- 1.4 Work method and resources are selected to meet job requirements

### 2 Undertake track drainage work

- 2.1 Environmental protection requirements are implemented as required
- 2.2 Drainage is cleaned to relevant standard by mechanical methods in accordance with workplace standards
- 2.3 Drainage is cleaned, repaired or installed to relevant standard by manual methods in accordance with workplace standards
- 2.4 Work is completed to meet drainage requirements

### 3 Complete documentation

- 3.1 Required documentation procedures and processes are confirmed
- 3.2 Documentation is filed in legibly and proofread
- 3.3 Documentation is processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIS2027A Install and maintain surface track drainage.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIS2027 Install and maintain surface track drainage

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- cleaning, repairing or installing drainage to relevant rail industry standard by manual and mechanical methods in accordance with workplace procedures
- following operational instructions and work sequences
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant plans
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- selecting and using relevant equipment and tools
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes of defects such as erosion and water scouring
- drainage requirements of various types of earthworks
- environmental protection requirements
- functions and design principles of drainage
- hazards that may exist when installing and maintaining surface track drainage, and ways

of controlling the risks involved

- hydrology and hydraulics rail industry standard
- problems that may occur when installing and maintaining surface track drainage, and action that can be taken to report or resolve these problems
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- required rail industry standards for materials and the methods involved in installing and maintaining surface track drainage
- workplace procedures for installing and maintaining surface track drainage.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in appropriate range of situations in the rail corridor workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

## **TLIS2028 Install and replace transoms**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to install and replace transoms on underbridges in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes preparing for work, installing/replacing transoms and completing documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment.

It involves the application of routine operational principles and procedures when installing or replacing transoms, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

S – Construction and Installation

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Prepare for work

- 1.1 Worksite is identified
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Installation, replacement or repair method is selected to meet work requirements in accordance with workplace procedures
- 1.4 Plant, equipment and other materials are prepared for work
- 1.5 Transoms are prepared in accordance with job requirements using correct methods, including dressing and protective coatings

### 2 Install or replace transoms

- 2.1 Unserviceable transoms are extracted as required, using manual or mechanical methods in accordance with workplace procedures
- 2.2 New transom is installed using manual or mechanical methods in accordance with workplace standards and procedures
- 2.3 Transom is suitably supported by appropriate methods in accordance with workplace standards and procedures
- 2.4 Transom bolts are replaced or tightened as required
- 2.5 Work is completed to meet track geometry requirements in accordance with workplace standards and procedures
- 2.6 Work is checked for compliance with acceptance standards for spacing, skew and geometry

### 3 Complete documentation

- 3.1 Required documentation procedures and processes are confirmed
- 3.2 Documentation is filled in legibly and proofread
- 3.3 Documentation is processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIS2028A Install and replace transoms.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIS2028 Install and replace transoms

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying, selecting and using relevant tools and equipment
- implementing prepared contingency plans
- installing and replacing transoms on underbridges
- interpreting and following operational instructions and following scheduled work processes
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- preparing for work by selecting appropriate methods, materials and equipment for a variety of situations
- reading and interpreting relevant instructions, procedures, route information and signs
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- contents of relevant workplace technical manuals and instructions
- emergency management plan
- hazards that may exist when installing and replacing transoms, and ways of controlling the risks involved
- problems that may occur when installing and replacing transoms, and action that can be taken to report or resolve these problems
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- track structure and geometry requirements
- transom condition and placement acceptance rail industry standards
- types of tools and equipment that may be used when installing and replacing railway transoms, and their applications
- workplace procedures for installing and replacing transoms.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

## TLIS2030 Carry out track ballasting

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to carry out track ballasting manually and mechanically in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes determining the job requirements, carrying out the ballast activity in accordance with work orders, and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when carrying out track ballasting, as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Determine job requirements

- 1.1 Worksite is identified
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Work method is selected to meet job requirements
- 1.4 Resources are identified to meet the scope of the job and work methods selected

### 2 Undertake ballast activity

- 2.1 Ballast is removed from track using appropriate methods and equipment, in accordance with workplace procedures
- 2.2 Ballast profile is established through repair of existing ballast and/or distribution of new ballast using appropriate methods and equipment, in accordance with workplace procedures
- 2.3 Work is completed to meet ballast profile requirements to ensure safe operation of trains in accordance with workplace procedures

### 3 Complete documentation

- 3.1 Required documentation procedures and processes are confirmed
- 3.2 Documentation is filled in legibly and proofread
- 3.3 Documentation is processed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIS2030A Carry out track ballasting.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIS2030 Carry out track ballasting

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- distributing new ballast by manual and/or mechanical methods
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions including the correct work sequences
- modifying activities depending on operational contingencies, risk situations and environments
- performing work activities in terms of planned schedule
- reading and interpreting relevant instructions and manuals
- removing and distributing existing ballast by manual and/or mechanical methods
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- selecting and using relevant equipment and tools
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- ballast profile standards including ballast depth, resistance, shoulder, shoulder height and shoulder width
- functions of ballast
- hazards that may exist when carrying out of track ballasting and ways of controlling the risks involved
- materials and methods involved in restoring ballast profiles

- problems that may occur when carrying out track ballasting and action that can be taken to report or resolve these problems
- relevant rail danger zones
- relevant rail industry standard for carrying out track ballasting
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace procedures for carrying out track ballasting.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIS2031 Install railway sleepers

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to install railway sleepers manually or mechanically in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes preparing for work, restoring track gauge, installing or replacing sleepers and completing documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when installing railway sleepers, as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Prepare for work

- 1.1 Worksite is identified
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Installation, replacement or repair method is selected to meet work requirements in accordance with worksite standards and procedures
- 1.4 Plant, equipment and materials are prepared for work

### 2 Restore track gauge

- 2.1 Equipment and tools appropriate to task are selected and checked for correct operation in accordance with manufacturer instructions and workplace procedures
- 2.2 Track gauge is restored as required, using appropriate methods in accordance with worksite standards and procedures
- 2.3 Track gauge measurements are recorded in accordance with workplace procedures

### 3 Install or replace sleeper

- 3.1 Unserviceable sleepers are extracted as required, using manual or mechanical methods in accordance with worksite procedures
- 3.2 New sleeper is installed using manual or mechanical methods in accordance with worksite procedures
- 3.3 Sleeper plates are installed on relevant sleeper types in accordance with worksite procedures
- 3.4 Sleeper is suitably packed or supported by appropriate methods in accordance with worksite procedures
- 3.5 Work is completed to meet track geometry requirements in accordance with worksite procedures
- 3.6 Work is checked for compliance with acceptance standards for spacing, skew and geometry

### 4 Complete

- 4.1 Required documentation procedures and processes are

**documentation**

confirmed

4.2 Documentation is filled in legibly and proofread

4.3 Documentation is processed in accordance with workplace procedures

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

**Unit Mapping Information**

This unit replaces and is equivalent to TLIS2031A Install railway sleepers.

**Links**

# TLIS2033 Install and repair temporary track supports

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to install and repair temporary track supports in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes determining job requirements, preparing and installing temporary support and completing documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when installing and repairing temporary track supports, as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Prepare for work

- 1.1 Worksite is identified
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Plant, equipment and materials are organised to meet the scope of the job and installation type

### 2 Install or repair temporary support

- 2.1 Foundation is prepared as required, in accordance with site requirements and specifications
- 2.2 Component surfaces are treated with appropriate coating as required to prevent degradation of components
- 2.3 Temporary support is installed in accordance with workplace standards and procedures
- 2.4 Level and alignment is adjusted to running surface to ensure correct geometry and profile
- 2.5 Temporary support is adjusted/readjusted and secured as required, to ensure full bearing is achieved for integrity and safety of structure

### 3 Complete documentation

- 3.1 Required documentation procedures and processes are confirmed
- 3.2 Documentation is filled in legibly and proofread
- 3.3 Documentation is processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIS2033 Install and repair temporary track supports

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- checking compliance of work with job specifications
- completing relevant documentation
- determining job requirements
- following operational instructions and work sequences
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- installing and/or repairing a range of temporary supports
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- organising plant, materials and equipment for scope of the track support job
- planning work requirements in accordance with workplace procedures
- preparing and installing temporary supports
- reading and interpreting relevant plans, specifications, instructions and manuals
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- selecting and using relevant equipment and tools in accordance with workplace procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency management plan

- hazards that may exist when installing and repairing temporary track supports, and ways of controlling the risks involved
- problems that may occur when installing and repairing temporary track supports, and action that can be taken to report or resolve these problems
- relevant rail industry standards
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- track support equipment and material specification, and compliance with workplace safeworking procedures
- workplace procedures for installing and repairing temporary track supports.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIS2034 Install and repair rail fastening systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to install and repair rail fastening systems in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes identifying work requirements, installing the fastening system, repairing the fastening system and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when installing and repairing rail fastening systems, as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Prepare for work

- 1.1 Worksite is identified to confirm work requirements
- 1.2 Appropriate fastening system is chosen to suit job requirements
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Appropriate tools and equipment are selected for job to facilitate the effective replacement/repair of components

### 2 Install fastening system

- 2.1 Required rail industry standards for installing fastening systems are confirmed
- 2.2 Selected fastening systems are installed using appropriate tools and equipment in accordance with rail industry standards
- 2.3 Tools and equipment are stored after use

### 3 Repair fastening system

- 3.1 Appropriate method is chosen to repair fastening system
- 3.2 Required standards for repairing fastening systems are confirmed
- 3.3 Fastening systems are repaired to maintain integrity of rail fastening systems in accordance with rail industry standards
- 3.4 Tools and equipment are stored after use

### 4 Complete documentation

- 4.1 Required documentation procedures and processes are confirmed
- 4.2 Documentation is filled in legibly and proofread
- 4.3 Documentation is processed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIS2034 Install and repair rail fastening systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant system of safeworking and workplace procedures
- ensuring completed track complies with rail industry track standards for the relevant rail corridor
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- installing rail fastening systems on track using static and resilient fastenings used in the relevant rail corridors
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant technical plans, specifications, instructions and manuals
- repairing a section of anchored track to maintain integrity of rail fastening systems
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- selecting and using relevant equipment and tools
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- characteristics and relevant information on rail fastening systems
- characteristics of plant and equipment, hardware and components used in work activities
- hazards that may exist when installing and repairing rail fastening systems, and ways of controlling the risks involved
- information in relevant manufacturer instructions, workplace technical manuals and instructions
- problems that may occur when installing and repairing rail fastening systems, and action that can be taken to report or resolve these problems
- relevant rail fastening and anchoring equipment and methods
- relevant rail danger zones
- relevant rail industry standards on rail fastening systems
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace procedures for installing and repairing rail fastening systems.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIS2035 Install and repair fences and gates

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to install and repair fences and gates in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes selecting and preparing the materials, clearing and excavating the site, digging the required holes, installing the components, performing any required repairs and maintenance of the fences and/or gates, and completing required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when installing and repairing fences and gates, as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

## Competency Field

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Select and prepare materials**

- 1.1 Work requirements are determined to identify scope of work and resources required
- 1.2 Obstacles are identified and underground services are marked to avoid the vicinity of the fence line
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Materials required for job are selected in accordance with specifications
- 1.5 Materials are prepared using appropriate methods and tools

### **2 Dig holes and excavate soil**

- 2.1 Site is cleared and excavations are made as required to ensure access and safeworking conditions
- 2.2 Holes are dug to requirements using appropriate methods and equipment to enable safe construction of fence

### **3 Install components**

- 3.1 Poles/posts are concreted or compacted into position in accordance with job requirements
- 3.2 Wire is strung and tensioned to standard as required
- 3.3 Fencing is constructed to appropriate standards

### **4 Perform repairs and maintenance**

- 4.1 Defective materials/components are removed and replaced as required to ensure correct operation and function of fence or gate
- 4.2 Tools and equipment are stored securely, following safety guidelines
- 4.3 Required documentation is confirmed, completed and processed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIS2035A Install and repair fences and gates.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIS2035 Install and repair fences and gates

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking system and workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- installing and repairing fences and gates in accordance with workplace procedures
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions and manuals
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- selecting and using relevant tools and equipment
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of plant and equipment, hardware and components used in work activities
- contents of relevant workplace technical manuals and instructions
- hazards that may exist when installing and repairing fences and gates, and ways of controlling the risks involved
- problems that may occur when installing and repairing fences and gates, and action that can be taken to report or resolve these problems

- relevant rail industry standards for installing and repairing fences and gates
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace documentation requirements
- workplace procedures for installing and repairing fences and gates.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

## **TLIS2036 Use chemical repair products**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to use chemical repair products in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes determining work requirements, applying a chemical repair method in accordance with manufacturer instructions and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when using chemical repair products, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

S – Construction and Installation

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                      |  |
|--------------------------------------|--|
| <b>1 Determine work requirements</b> | 1.1 Site is inspected thoroughly to establish best means of repair   |
|                                      | 1.2 Work requirements are determined to identify scope of work and resources required  |
|                                      | 1.3 Hazards are identified, risks are assessed and control measures are implemented  |
|                                      | 1.4 Personal protective equipment is identified, selected and used as required   |
| <b>2 Apply repair method</b>         | 2.1 Components and surfaces are cleaned and prepared in accordance with manufacturer instructions and workplace procedures to ensure maximum bond strength |
|                                      | 2.2 Chemical repair product is mixed and prepared in accordance with manufacturer instructions and workplace procedures to ensure maximum bond strength    |
|                                      | 2.3 Chemical repair product is applied in accordance with manufacturer instructions and workplace procedures to minimise waste and maximise effectiveness  |
|                                      | 2.4 Repair site is cleaned of excess repair product to ensure clean finish   |
|                                      | 2.5 Repair is stabilised and supported using appropriate method until product is sufficiently cured to enable maximum bond strength                        |
|                                      | 2.6 Chemical repair product is used in a safe and environmentally sound manner to minimise health and safety risks to personnel                            |
| <b>3 Complete documentation</b>      | 3.1 Required documentation procedures and processes are confirmed  |
|                                      | 3.2 Documentation is filled in legibly and proofread   |
|                                      | 3.3 Documentation is processed in accordance with workplace procedures   |

## Foundation Skills

# Assessment Requirements for TLIS2036 Use chemical repair products

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- checking compliance with work and job specifications
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- inspecting repair site and determining scope of work
- interpreting and following operational instructions and prioritising work when using chemical repair products
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures, information and labels
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- selecting and using relevant equipment and tools
- selecting and using the correct repair method in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and manufacturer instructions
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of relevant plant and equipment, structures and chemical products used in work activities
- hazards that may exist when using chemical repair products and ways of controlling the risks involved
- information in relevant workplace technical manuals and instructions
- problems that may occur when using chemical repair products and action that can be taken to report or resolve these problems
- relevant recording and documentation procedures
- relevant rail danger zones
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- safety data sheets (SDSs)/material safety data sheets (MSDSs) and manufacturer instructions
- workplace procedures for using chemical repair products.
- 

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

## **TLIS2044 Carry out rail installation**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to install rail in accordance with safeworking and regulatory requirements, and organisational policies and procedures.

It includes identifying job requirements, preparing rail for installation, installing rail, joining rail ends, restoring track and completing documentation.

People achieving competence in this unit will need to fulfil applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under supervision, generally in a team environment. It involves the application of routine operational principles and procedures when installing rail, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

S – Construction and Installation

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Identify job requirements**

1.1 Scope of work is determined and resources are arranged

1.2 Hazards are identified, risks are assessed and control measures are implemented

1.3 Replacement rail is checked for compliance with acceptance standards, in accordance with organisational procedures

### **2 Prepare rail for installation**

2.1 Rails are loaded and unloaded using approved methods to minimise risk to health and safety, and damage to rail components

2.2 Rails are cut to required length using an appropriate method to minimise delays and wastage

2.3 Rails are bent, as required, to the correct curvature to ensure correct track geometry is maintained to rail industry standard

### **3 Position rail**

3.1 Existing rail is unfastened and removed as required, using appropriate equipment or manual method

3.2 New rail is lifted into place using appropriate equipment or manual method, maximising efficiency and minimising risk of injuries

### **4 Join rail ends**

4.1 Rail joints are prepared for welding or are assembled and installed to specifications in accordance with organisational procedures

4.2 Rail bonds or other track circuit connections are installed or restored as required in accordance with organisational procedures

### **5 Restore track**

5.1 Track fastenings are restored in accordance with organisational procedures

5.2 Track measurements are recorded in accordance with workplace procedures

5.3 Equipment used to restore track is stored after use

### **6 Complete documentation**

6.1 Documentation is completed in accordance with organisational procedures

6.2 Documentation is processed in accordance with organisational procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIS2044A Carry out rail installation.

## **Links**

# Assessment Requirements for TLIS2044 Carry out rail installation

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- checking compliance of work with job specifications
- checking that replacement rails meet rail industry standards and workplace requirements
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying job requirements
- installing rail
- interpreting and following operational instructions and prioritising work
- joining rail ends
- measuring rail weight and dimensions
- modifying activities depending on operational contingencies, risk situations and environments
- preparing rail for installation
- reporting and rectifying problems, faults and malfunctions within limits of own role, in accordance with workplace procedures
- restoring track
- selecting and using relevant equipment and tools.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of plant and equipment, transport, structures, hardware and components used in work activities
- hazards that may occur when loading and unloading rail, and when installing and replacing rail, and action that can be taken to report or resolve these hazards
- rail industry acceptance standards for re-use of rails
- rail industry installation standards
- relevant rail danger zones
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations applicable to the job role
- workplace procedures for hazardous manual tasks
- workplace procedures for installing and replacing rail.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

## **TLIS3005 Install mechanical infrastructure for signalling**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to install mechanical infrastructure for signalling in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes assembling components, installing the equipment and components to specifications, and testing and adjusting the equipment to workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when installing mechanical infrastructure for signalling, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

S – Construction and Installation

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Assemble components**

- 1.1 Components are identified and selected correctly to comply with specifications
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Components are pre-assembled and positioned for installation and to identify any manufacturing fitting requirements
- 1.4 Components/linkages are modified to allow for complete installation in accordance with job specifications

### **2 Install equipment and components**

- 2.1 Components are fabricated to ensure compliance with job specifications
- 2.2 Equipment/component layouts are checked to ensure positioning job specifications
- 2.3 Hole/fastening positions are marked and drilled to allow for installation
- 2.4 Equipment/components are assembled and secured in the correct sequence
- 2.5 Interlinking components are attached and secured
- 2.6 Operational power source is connected by appropriate personnel as required to allow for operational testing

### **3 Test and adjust equipment**

- 3.1 Required authorisation for testing is confirmed to ensure safe train operations may continue
- 3.2 Correct test equipment/procedures are identified
- 3.3 Appropriate tests are correctly carried out in conjunction with other personnel to ensure operational compliance
- 3.4 Required adjustments are carried out in conjunction with other personnel as required to ensure correct operational compliance
- 3.5 Operational readiness is confirmed and required documentation/certification is correctly completed to allow for commissioning
- 3.6 Equipment is locked and secured to ensure against

unauthorised interference

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIS3005A Install mechanical infrastructure for signalling.

## Links

# Assessment Requirements for TLIS3005 Install mechanical infrastructure for signalling

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- adjusting and testing equipment for correct operation in accordance with manufacturer instructions and workplace procedures
- applying relevant workplace procedures
- assembling interlinking components
- checking and confirming compliance with operational specifications
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- installing equipment and components in accordance with manufacturer instructions and workplace procedures
- interpreting and following operational instructions and prioritising work
- measuring, aligning and assembling pre-made components
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant designs, instructions, procedures, information, technical data and drawings
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- testing and adjusting mechanical equipment in accordance with manufacturer instructions and workplace procedures
- using appropriate fabrication techniques
- using hand and power tools, portable electric generators and air compressors in accordance with manufacturer instructions and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- fault diagnosis, fault rectification and problem solving
- fault finding and testing procedures
- hazards that may exist when installing mechanical infrastructure for signalling, and ways of controlling the risks involved
- mechanical infrastructure components and characteristics
- mechanical signal adjusting techniques
- principles of signalling
- problems that may occur when installing mechanical infrastructure for signalling, and action that can be taken to report or resolve these problems
- relevant Rail Infrastructure Manager workplace policies and procedures for installing mechanical infrastructure for signalling
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant recording and documentation procedures
- safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and workplace procedures
- track layout
- workplace rail industry standards and procedures for installing mechanical infrastructure for signalling.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations

- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, SDSs/MSDSs, regulations, rail industry standards, codes of practice and operation manuals.

# TLIS3009 Install mechanical signalling locking and interlocking devices

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to install mechanical signalling locking and interlocking devices in accordance with safeworking and regulatory requirements, and workplace procedures

It includes assembling components, installing equipment and components to specifications, and testing and adjusting equipment in accordance with workplace procedures.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment.

It involves the application of routine operational principles and procedures when installing mechanical signalling locking and interlocking devices, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Assemble components

- 1.1 Correct components are identified and selected to comply with job specifications
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Equipment and components are pre-assembled and positioned for installation in compliance with work orders and job specifications

### 2 Install equipment and components

- 2.1 Equipment/component layout is prepared and checked to ensure position matches job specifications
- 2.2 All fastening positions are marked and drilled for installation
- 2.3 Equipment and components are secured in correct sequence and position in compliance with job specifications
- 2.4 Additional requirements or alterations to existing components are identified and appropriate follow-up action is taken
- 2.5 Manufacturing of additional components is carried out to allow for complete installation
- 2.6 Alterations to existing components are carried out to provide for the installation of new equipment
- 2.7 All interlinking components are correctly attached and secured ready for testing in compliance with work specifications

### 3 Test and adjust equipment

- 3.1 Required authorisation for tests is confirmed to ensure safe train operations may continue
- 3.2 Test procedures are coordinated and liaison with appropriate personnel is maintained to ensure overall safety
- 3.3 Appropriate tests are carried out to ensure all operations are within specifications and appropriate adjustments are made to ensure smooth operation
- 3.4 Testing is carried out to ensure functionality of all operations to the locking table

- 3.5 Operational readiness is confirmed and required documentation/certification is correctly completed and processed to allow for commissioning

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIS3009A Install mechanical signalling locking and interlocking devices.

## Links

# Assessment Requirements for TLIS3009 Install mechanical signalling locking and interlocking devices

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- applying relevant legislation and workplace procedures
- assembling interlinking components
- checking and confirming compliance with operational specifications
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures, information, technical data and drawings
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- testing and adjusting close tolerance mechanically operating equipment when installing mechanical signalling locking and interlocking devices
- using hand, portable, power and air tools in accordance with workplace procedures
- working collaboratively with others when installing mechanical signalling locking and interlocking devices
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- fault finding techniques
- hazards that may exist when installing mechanical signalling locking and interlocking devices, and ways of controlling the risks
- machining techniques
- safety data sheets (SDSs)/material safety data sheets (MSDSs)
- mechanical fitting techniques
- problems that may occur when installing mechanical signalling locking and interlocking devices and action that can be taken to report or resolve these problems
- rail industry standards for installing mechanical signalling locking and interlocking devices
- relevant mechanical theory and principles
- relevant rail danger zones
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant recording and documentation procedures
- workplace procedures for installing mechanical signalling locking and interlocking devices.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment

currently used in industry

- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIS3010 Test rail using ultrasonic equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to test plain rail and field welds using ultrasonic equipment in accordance with rail industry standards, safeworking and regulatory requirements, and workplace procedures.

It includes determining test requirements, conducting testing using hand directed equipment, conducting visual examination and measurement of welds, identifying and classifying defects, and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when testing rail using ultrasonic equipment, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Determine test requirements**

- 1.1 Hazards are identified, risks are assessed and control measures are implemented
- 1.2 Test site is identified and prepared using appropriate procedures and materials
- 1.3 Preparation processes are carried out in accordance with relevant procedures, statutory and work health and safety (WHS)/occupational health and safety (OHS) requirements

### **2 Conduct testing using hand directed equipment**

- 2.1 Most appropriate ultrasonic test for the application is selected
- 2.2 Testing equipment is selected and prepared in accordance with rail industry standards and workplace procedures
- 2.3 Ultrasonic test is carried out in accordance with relevant standards, specifications and WHS/OHS requirements
- 2.4 Ultrasonic testing equipment is checked for proper function, maintained and stored in accordance with procedures, WHS/OHS requirements and manufacturer instructions

### **3 Conduct visual examination and measurement of rail and welds**

- 3.1 Rail and welds are visually assessed for obvious defects
- 3.2 New welds are assessed for alignment and adjustment tolerance in accordance with standards and/or procedures
- 3.3 Weld repairs are assessed for alignment tolerance in accordance with standards and/or procedures

### **4 Identify and classify defects**

- 4.1 Indications are assessed and defects detected in accordance with standards and/or procedures
- 4.2 Defects are classified in accordance with standards and/or procedures
- 4.3 Defective welds and weld repairs are marked in accordance with standards and/or procedures

### **5 Complete documentation**

- 5.1 Test results are reported in accordance with standards and/or procedures

- 5.2 Documentation requirements are confirmed, in accordance with workplace procedures
- 5.3 Documentation is filled in legibly and proofread
- 5.4 Documentation is processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIS3010A Test rail using ultrasonic equipment.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIS3010 Test rail using ultrasonic equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least five** separate occasions and include:

- adapting to differences in equipment in accordance with operating procedures
- applying relevant workplace procedures
- assessing inspection areas visually and identifying and classifying obvious discontinuities
- carrying out additional visual and geometry assessments for field welds
- classifying defects in accordance with workplace procedures
- completing documentation related to ultrasonic testing rail and welds
- conducting testing in accordance with rail industry standards and/or workplace procedures
- conducting visual examination and measurement of rail and welds
- determining test requirements
- identifying hazards associated with ultrasonic testing and taking required action to minimise, control or eliminate identified hazards
- identifying and preparing inspection areas for testing using appropriate procedures and materials
- identifying types of rail defects and classifications in accordance with standards and/or procedures
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- interpreting screen indications in accordance with manufacturer instructions and workplace procedures
- locating, measuring and assessing defect size for all defect types
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures, information, technical data, standards and drawings
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- selecting and setting up probes to use to locate each type of defect

- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- beam angles and probes required to locate various defect types
- fundamentals of rail and rail defects
- hazards that may exist when ultrasonic testing rail and welds, and ways of controlling the risks involved
- mechanical information relevant to ultrasonic testing rail and welds
- principles of ultrasonic testing
- problems that may occur when ultrasonic testing rail and welds, and action that can be taken to report or resolve these problems
- rail defects and rail defect classification
- relevant rail danger zones
- relevant recording and documentation procedures
- relevant safety, WHS/OHS and environmental procedures and regulations
- ultrasonic probes, beam, their characteristics and screen display
- workplace procedures when ultrasonic testing rail and welds.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in

simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIS3011 Test rail using nondestructive testing equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to test switches, crossings and other special components in turnouts using ultrasonic and other nondestructive testing equipment in accordance with rail industry standards, safeworking and regulatory requirements, and workplace procedures.

It includes determining test requirements, conducting ultrasonic testing using hand directed equipment, conducting nondestructive testing, classifying defects and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when testing turnouts using nondestructive testing equipment, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Determine test requirements**

- 1.1 Location and type of test is identified
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Test site is prepared using appropriate procedures and materials
- 1.4 Preparation processes are carried out in accordance with relevant procedures, statutory and work health and safety (WHS)/occupational health and safety (OHS) requirements

### **2 Conduct ultrasonic testing using hand directed equipment**

- 2.1 Most appropriate ultrasonic test for the application is selected
- 2.2 Testing equipment is selected and prepared in accordance with standards and/or workplace procedures
- 2.3 Ultrasonic testing equipment is checked for proper function, maintained and stored in accordance with procedures, WHS/OHS requirements and manufacturer instructions
- 2.4 Ultrasonic test is carried out in accordance with relevant standards, specifications and WHS/OHS requirements

### **3 Conduct nondestructive testing**

- 3.1 Most appropriate test for the application is selected
- 3.2 Testing equipment is selected and prepared in accordance with standards and/or procedures
- 3.3 Nondestructive test is carried out in accordance with relevant standards, specifications and WHS/OHS requirements
- 3.4 Nondestructive testing equipment is cleaned and stored in accordance with procedures, WHS/OHS requirements and manufacturer instructions

### **4 Identify and classify defects**

- 4.1 Crossings and switches are visually assessed for defects in accordance with standards and/or procedures

- 4.2 Indications are assessed and defects are detected in accordance with standards and workplace procedures
- 4.3 Defects are classified in accordance with standards and/or procedures
- 4.4 Defective components are marked in accordance with standards and/or procedures

## **5 Complete documentation**

- 5.1 Test results are reported in accordance with standards and/or procedures
- 5.2 Documentation requirements are confirmed, in accordance with workplace requirements
- 5.3 Documentation is filled in legibly and proofread
- 5.4 Documentation is processed in accordance with workplace procedures

# Assessment Requirements for TLIS3011 Test rail using nondestructive testing equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- adapting to differences in equipment in accordance with operating procedures
- applying relevant workplace procedures
- checking and maintaining nondestructive testing equipment
- checking turnouts for observable faults
- conducting visual examinations
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying types of rail defects in switches and crossings
- implementing contingency plans
- interpreting and following relevant operational instructions and prioritising work
- locating, measuring and assessing defect size for all defect types
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant technical data, drawings, instructions and manuals
- reporting and/or rectifying identified problems, test results, faults or malfunctions, in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hazards that may exist when testing turnouts and rail using nondestructive testing equipment, and ways of controlling the risks involved
- problems that may occur when testing turnouts and rail using nondestructive testing equipment, and action that can be taken to report or resolve these problems
- relevant rail danger zones
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant workplace technical manuals and instructions required to test switches, crossings and other special components in turnouts using ultrasonic and other nondestructive testing equipment
- special inspection requirements for alloy hardened crossings
- types of rail defects found in turnouts and rail defect classification
- ultrasonic testing requirements for turnouts and special trackwork
- workplace procedures for testing turnouts and rail using nondestructive testing equipment.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIS3023 Erect and mount structures and housings for signalling equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to erect and mount structures and housings for signalling equipment in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes installing the foundations, assembling the components, and installing and mounting the structures and housings in accordance with specifications.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when carrying out general site maintenance, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Install foundations

- 1.1 Hazards are identified, risks are assessed and control measures are implemented
- 1.2 Worksite is inspected and appropriate arrangements are made for safe access for heavy plant and equipment
- 1.3 Foundations are poured/laid in the correct location, size and quality requirements in accordance with the work orders and job specifications
- 1.4 Authorisation is confirmed as required to ensure safe train operations may continue

### 2 Assemble components

- 2.1 Components are correctly identified, prepared and laid out for assembly in accordance with work orders/assembly specifications
- 2.2 Components are pre-assembled in the correct sequence and checked to ensure safe and efficient installation can commence

### 3 Install and mount structures and housings

- 3.1 Structures are positioned on foundations and checked for compliance to job specifications in preparation for securing
- 3.2 Structures are secured and checked for compliance with safety requirements and job specifications
- 3.3 Housings and other equipment/components are correctly positioned, installed and secured to comply with work orders and job specification requirements
- 3.4 Housings and other equipment/components are secured to ensure correct orientation to track and to prevent unauthorised access
- 3.5 Structures and housings are positioned to ensure they are clear of all other structures, obstructions and interference, including minimum structure gauge
- 3.6 Equipment is locked and secured to maintain site safety and security

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIS3023A Erect and mount structures and housings for signalling equipment.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIS3023 Erect and mount structures and housings for signalling equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- assembling and pre-assembling pre-made components
- checking compliance of work with job specifications
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- measuring and laying out plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- planning own work including predicting consequences and identifying improvements
- reading and interpreting relevant technical data, instructions and manuals
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- selecting and using relevant equipment and tools
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- characteristics of plant and equipment, transport, structures, hardware and components used in work activities
- hazardous materials and situations and related personal protection measures
- hazards that may exist when erecting and mounting structures and housings for signalling equipment and ways of controlling the risks involved
- impact on work activities of regulatory requirements
- information in workplace technical manuals and instructions
- problems that may occur when erecting and mounting structures and housings for signalling equipment and action that can be taken to report or resolve these problems
- rail operations and train movement
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant recording and documentation procedures
- safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and workplace procedures
- track layout
- workplace documentation and records system management related to the work concerned
- workplace procedures for erecting and mounting structures and housings for signalling equipment.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, SDSs/MSDSs, codes of practice and operation manuals.

# TLIS3025 Implement ballast unloading

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to implement ballast unloading in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes determining the job requirements, carrying out the unloading activity in accordance with work orders, and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under limited supervision, generally within a team environment. It involves the application of routine operational principles and procedures when implementing ballast unloading, as part of workplace activities across a variety of operational context within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Determine job requirements

- 1.1 Work requirements are determined for new ballast work and/or repair of existing ballast
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Obstacles in work area are identified and removal or protection are organised as necessary to ensure smooth workflow in accordance with workplace procedures
- 1.4 Resources are organised to meet the scope of the job and appropriate work methods are selected
- 1.5 Ballast quantities are determined

### 2 Undertake ballast unloading

- 2.1 Site communications are established and agreed to ensure safe and efficient working conditions
- 2.2 Ballast unloading operation is implemented to ensure appropriate flow rates and extent
- 2.3 Ballast is distributed by manual and/or mechanical methods to allow safe operation of trains
- 2.4 Ballast is removed from sensitive infrastructure to ensure safe operation of trains and safety of public

### 3 Complete documentation

- 3.1 Required documentation procedures and processes are confirmed
- 3.2 Documentation is filed in legibly and proofread
- 3.3 Documentation is processed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIS3025A Implement ballast unloading.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIS3025 Implement ballast unloading

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- ensuring ballast is distributed so as to meet requirements for safe operation and in accordance with workplace procedures
- ensuring unloading operation is carried out correctly
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- negotiating communication methods and communicating effectively with others including train drivers and equipment operators
- operating communications equipment to required protocol
- reading and interpreting relevant technical plans, specifications, instructions and manuals
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- selecting and using relevant equipment and tools in accordance with workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- ballast flow rates
- ballast hopper operation
- contents of workplace technical manuals relating to ballast unloading and profile
- functions of ballast
- hazards that may exist when implementing track ballast activities and ways of controlling the risks involved
- problems that may occur when implementing track ballast activities and action that can be taken to report or resolve these problems
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- required rail industry standard of materials and methods involved in implementing ballast unloading activities
- relevant rail danger zones
- workplace procedures for implementing ballast unloading activities.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in appropriate range of situations in the rail corridor workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

## Links

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# TLIS3026 Implement track maintenance and construction

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to implement track maintenance and construction activities in accordance with approved standards, safeworking and regulatory requirements, and workplace procedures.

It includes planning work, implementing construction or maintenance activities, dealing with maintenance and construction problems, and completing required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed generally in a team environment. It involves the application of routine operational principles and procedures when implementing track maintenance and/or construction, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Plan work**

- 1.1 Scope of work is confirmed
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Operational constraints are identified
- 1.4 Information requirements are identified and accessed
- 1.5 Method of work is selected and general operating sequence is determined
- 1.6 Resources required for the work are arranged

### **2 Implement construction or maintenance activities**

- 2.1 Competent personnel are allocated tasks in accordance with the work sequence
- 2.2 Tasks are assessed as being in accordance with the predetermined sequence and appropriate for the work
- 2.3 Work procedures are monitored and evaluated as being appropriate and in accordance with standards and procedures
- 2.4 Human and other resources are assessed as being adequate for the work

### **3 Deal with maintenance and construction problems**

- 3.1 Causes and effects of system faults and failures within the worksite are diagnosed
- 3.2 Impact of work on track system integrity is assessed
- 3.3 Appropriate action is taken to ensure track system integrity
- 3.4 Scope of work is modified to include related tasks and/or interfaces
- 3.5 Related faults and/or failures beyond the authorised scope of work are reported

### **4 Complete documentation**

- 4.1 Required documentation procedures and processes are confirmed
- 4.2 Documentation is filed in legibly and proofread

4.3 Documentation is processed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIS3026B Implement track maintenance and construction.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIS3026 Implement track maintenance and construction

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least four** separate occasions and include:

- applying relevant system of safeworking and workplace procedures
- assessing impact of work on track system integrity
- diagnosing causes and effects of system faults and failures resulting from work activities
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- maintaining track geometry
- monitoring, sequencing and implementing work activities in terms of planned schedule and appropriateness, in accordance with rail industry standards and workplace procedures
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant technical data, drawings, instructions and manuals
- reporting and rectifying within limits of own role, problems, faults and malfunctions, in accordance with workplace procedures
- selecting appropriate equipment in accordance with workplace procedures
- selecting appropriate work techniques
- supervising designated maintenance activities such as track construction, track maintenance or track surfacing
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation and record keeping workplace requirements
- fundamentals of rail infrastructure requirements to carry out track maintenance and/or construction
- hazards that may exist when maintaining and/or constructing track and ways of controlling the risks involved
- problems that may occur when maintaining and/or constructing track and action that can be taken to report or resolve these problems
- range of competencies required to carry out track maintenance and/or construction
- range of track maintenance and/or construction techniques and work processes
- relevant communications systems and procedures
- relevant rail industry standards, specifications and codes of practice
- relevant rail danger zones
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- track defects and required actions to ensure track system integrity
- track infrastructure and the interaction of all interfaces.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in appropriate range of situations in the rail corridor workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# **TLIS3029 Implement structures maintenance and installation of minor structures**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to implement structures maintenance and installation of minor structures in accordance with approved standards, safeworking and regulatory requirements, and workplace procedures.

It includes planning work, implementing maintenance activities, dealing with maintenance and construction problems, and completing required documentation.

People achieving competence in this unit will need to fulfil applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally in a team environment. It involves the application of routine operational principles and procedures when implementing structures maintenance and installing minor structures, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

S – Construction and Installation

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Plan work**

- 1.1 Scope of work is confirmed
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Operational constraints are identified
- 1.4 Information requirements are identified and accessed
- 1.5 Method of work is selected and general operating sequence is determined
- 1.6 Resources required for the work are arranged

### **2 Implement maintenance and construction activities**

- 2.1 Competent personnel are allocated tasks in accordance with the work sequence
- 2.2 Tasks are assessed as being in accordance with the predetermined sequence and appropriate for the work
- 2.3 Work procedures are monitored and evaluated as being appropriate and in accordance with standards and procedures
- 2.4 Human and other resources are assessed as being adequate for the work

### **3 Deal with maintenance and construction problems**

- 3.1 Causes and effects of system faults and failures in the worksite are diagnosed
- 3.2 Impact of work on structure integrity is assessed
- 3.3 Impact of work on track system integrity is assessed
- 3.4 Appropriate action is taken to ensure structure and track system integrity
- 3.5 Scope of work is modified to include related tasks and/or interfaces
- 3.6 Related faults and/or failures beyond the authorised scope of work are reported

### **4 Complete documentation**

- 4.1 Required documentation procedures and processes are confirmed

4.2 Documentation is filled in legibly and proofread

4.3 Documentation is processed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIS3029B Implement structures maintenance and installation of minor structures.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIS3029 Implement structures maintenance and installation of minor structures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least five** separate occasions and include:

- applying relevant workplace procedures
- assessing impact of work on structure integrity and on track system integrity
- communicating effectively with others
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- implementing structure maintenance and installation of minor structures in accordance with rail industry standards, safeworking system and workplace procedures
- implementing, monitoring and evaluating maintenance activities
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring, sequencing and implementing work activities in terms of planned schedule and appropriateness, in conformance with standards and procedures
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information, technical data, standards and drawings
- reporting and rectifying within limits of own role, problems, faults and malfunctions, in accordance with workplace procedures
- selecting appropriate equipment
- selecting appropriate safe work method for implementing structures maintenance and installing minor structures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation and record keeping requirements
- fundamentals of rail infrastructure relevant to implementing structures maintenance and installing minor structures
- hazards that may exist when undertaking structure maintenance and minor construction, and ways of controlling the risks involved
- problems that may occur when undertaking structure maintenance and minor construction, and action that can be taken to report or resolve these problems
- range of competencies required to carry out structure maintenance and construction
- range of structure maintenance and construction techniques and work processes
- relevant rail industry standards, specifications and codes of practice
- relevant rail danger zones
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- structure defects and action that can be taken to report or resolve them
- structure infrastructure and the interaction of all interfaces.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals
- exercises able to demonstrate competent performance in implementing five activities as listed below.

Competence must be assessed in 2 designated activities, plus 1 specified activity, plus 2 remaining activities:

- designated activities (2):
  - installing transoms
  - installing minor structures
- specified activities (any 1):
  - repairing concrete/masonry structures
  - repairing timber structures
  - repairing steel structures
- remaining activities (any 2):
  - maintaining bridge bearings
  - carrying out routine maintenance of structures
  - installing temporary track support
  - mixing and applying chemical repair products.

# TLIS3037 Install and repair rail earthworks

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to install and repair rail earthworks in accordance with safeworking and regulatory requirements, and organisational procedures.

It includes determining job requirements, undertaking trenching, establishing track formation and minor trackside earthworks, and completing documentation in accordance with specifications.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and guidelines.

Work is performed under some supervision, generally in a team environment. It involves the application of routine operational principles and procedures when installing and repairing rail earthworks, as part of organisational activities across a variety of operational contexts within the Australian rail system.

### Rail earthworks may include:

- accessing roads
- reconstructing track formation and capping
- rehabilitating waterways, including shaping channels and/or scour protection
- shaping shoulders (cesses)
- sub-surface drainage
- trackside or across track trenching (less than 1.5 m depth).

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Determine job requirements**

- 1.1 Worksite is identified
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Underground services are identified as required and marked to protect services from excavation
- 1.4 Work method is selected to meet job requirements
- 1.5 Resources are organised to meet the scope of the job and selected work methods

### **2 Undertake trenching**

- 2.1 Worksite is prepared for trenching
- 2.2 Excavation is undertaken along or across track to accommodate services in accordance with design and organisational procedures
- 2.3 Suitable materials and methods are used to backfill trench in accordance with design and organisational procedures

### **3 Establish track formation**

- 3.1 Excavation is undertaken to establish base for formation in accordance with design
- 3.2 Excavated material is removed from worksite
- 3.3 Suitable materials and methods are used to construct new track formation in accordance with design and organisational procedures

### **4 Establish and maintain minor trackside**

- 4.1 Trackside earthworks are constructed or repaired using appropriate equipment in accordance with workplace

**earthworks**

## procedures

4.2 Grading and/or compaction are carried out using appropriate equipment, and care is taken to maintain correct drainage and to protect the environment, trackside installations, fences and underground cabling

**5 Complete documentation**

5.1 Required documentation procedures and processes are confirmed

5.2 Documentation is filled in legibly and proofread

5.3 Documentation is processed in accordance with workplace procedures

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

**Unit Mapping Information**

This unit replaces and is equivalent to TLIS3037B Install and repair rail earthworks.

**Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIS3037 Install and repair rail earthworks

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- determining environmental protection requirements as required
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant plans
- repairing minor trackside earthworks including grading and compaction
- reporting and rectifying within limits of own role, identified problems, faults and malfunctions
- selecting and using relevant tools and equipment
- selecting appropriate safe work methods
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes of defects, such as erosion and water scouring
- characteristics of relevant plant and equipment, hardware and components used in earthwork activities
- environmental protection requirements relating to installing and repairing rail earthworks
- functions and design principles of track formation and earthworks
- hazardous situations and related personal protection measures
- hazards that may exist when installing and repairing rail earthworks, and ways of controlling the risks involved
- information in relevant workplace technical manuals and instructions
- problems that may occur when installing and repairing rail earthworks, and action that can be taken to report or resolve these problems
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- required rail industry standards for materials and the methods involved in installing and repairing rail earthworks
- workplace procedures for installing and repairing rail earthworks.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in appropriate range of situations in the rail corridor workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIS3039 Measure and mark track for resurfacing

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to undertake measurement and marking of track for resurfacing operations in accordance with safe working and regulatory requirements, and workplace procedures.

It includes identifying and marking track obstructions, using appropriate measurement tools to measure the range of geometry elements, calculating recording and marking data for resurfacing operations, and recording and reporting results.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when measuring and marking track for resurfacing across a variety of operational contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |  |  |
|--|--|
| <b>1 Plan for resurfacing</b>                | <p>1.1 Scope of resurfacing work, including ramp-in and ramp-out points, mode of machine application and requirements for measurements are determined</p> <p>1.2 Appropriate survey documentation is selected</p> <p>1.3 Survey plaques and monuments are located and accurately interpreted as required</p> <p>1.4 Hazards are identified, risks are assessed and control measures are implemented</p>  |
| <b>2 Mark or protect obstructions</b>        | <p>2.1 Track obstructions are identified</p> <p>2.2 Track obstructions are marked or protected as required in accordance with workplace procedures</p>   |
| <b>3 Measure geometry and record results</b> | <p>3.1 Equipment appropriate to task is selected and checked for correct operation in accordance with manufacturer instructions and workplace procedures</p> <p>3.2 Equipment is operated in accordance with manufacturer or work instructions to provide appropriate data for analysis</p> <p>3.3 Track geometry is measured in accordance with workplace procedures</p> <p>3.4 Measurements are recorded in accordance with workplace procedures</p> |

# Assessment Requirements for TLIS3039 Measure and mark track for resurfacing

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with workplace procedures
- applying relevant safeworking system and workplace procedures
- calculating, recording and marking data for resurfacing operations from information sources such as survey sheets, survey marks and curve compensation charts
- completing relevant documentation
- identifying and marking track obstructions
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying, selecting and using tools and equipment
- interpreting and following operational instructions
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures, information, plans, drawings and specifications
- reading recorded track geometry data
- recording and reporting results
- reporting and/or rectifying identified problems, in accordance with workplace procedures
- using appropriate measurement tools to measure the range of geometry elements
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- details of safeworking system procedures
- hazards that may exist when measuring and marking track for resurfacing, and ways of controlling the risks involved
- methods of marking and protecting obstructions
- obstructions to resurfacing operations, including operation of tampers, ballast regulators and stabilisers
- problems that may occur when measuring and marking track for resurfacing operations, and action that can be taken to report or resolve these problems
- relevant rail danger zones
- relevant records procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- track data requirements for resurfacing
- track geometry parameters associated with maintenance and/or construction such as alignment, top, line, twist, superelevation
- workplace procedures for recording and analysing track parameters.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

# TLIS3040 Construct concrete or steel points and crossings

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to construct points and crossings with concrete or steel bearers as part of a construction team, in accordance with rail industry standards, safeworking and regulatory requirements, and workplace procedures.

It includes preparing for construction work, carrying out relevant construction work, preparing points and crossings for transport, and completing required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit involves the application of routine operational principles and procedures when constructing points and crossings on concrete or steel bearers, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

# Assessment Requirements for TLIS3040 Construct concrete or steel points and crossings

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least two** separate occasions and include:

- applying relevant safeworking system and workplace procedures
- assembling track layouts to plans, manufacturer instructions and specifications
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant technical data, standards and drawings
- using appropriate equipment to make accurate measurements of points and crossings
- using geometric and dimension principles to ensure compliance with design
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate hand tools, power tools and equipment required to complete activities
- clearances and tolerances
- documentation and record keeping workplace requirements
- features and principles of operation of points and crossings
- hazards that may exist when constructing points and crossings, and ways of controlling the risks involved
- measurement techniques
- point and crossing manufacturer instructions, rail industry standards and workplace procedures
- problems that may occur when constructing points and crossings, and action that can be taken to report or resolve these problems
- rail bending techniques applied to point and crossing components
- relevant safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and workplace procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- techniques for constructing points and crossings
- workplace procedures for constructing points and crossings.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

# TLIS3041 Construct timber or composite points and crossings

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to construct points and crossings on timber or composite bearers in accordance with rail industry standards, safeworking and regulatory requirements, and workplace procedures.

It includes preparing for construction work, carrying out relevant construction work, preparing points and crossings for transport, and completing required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit involves the application of routine operational principles and procedures when constructing points and crossings on undrilled timber or composite bearers, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Prepare points and crossings**

- 1.1 Work requirements are established to identify scope of work and resources required
- 1.2 Construction design or plan is obtained and interpreted
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Required resources are acquired
- 1.5 Assembly area is prepared or identified in accordance with workplace procedures
- 1.6 Delivered materials are checked for compliance with design

### **2 Fabricate points and crossings**

- 2.1 Structure is fabricated according to design specification
- 2.2 Bearers are selected for correct length, placed on assembly area and marked up, in accordance with specified design and workplace procedures
- 2.3 Reference rail is selected, marked up and fixed to bearers, in accordance with specified design and workplace procedures
- 2.4 Remaining steelwork is adjusted for correct geometry and is attached to bearers, in accordance with specified design and workplace procedure
- 2.5 Dimensions, geometry and condition are checked for compliance with design
- 2.6 Non compliances are repaired or replaced as required in accordance with workplace procedures

### **3 Prepare points and crossings for transport**

- 3.1 Transport requirements are confirmed
- 3.2 Transport requirements are followed in accordance with manufacturer instructions and workplace procedures
- 3.3 Documentation is completed and processed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIS3041A Construct timber or composite points and crossings.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIS3041 Construct timber or composite points and crossings

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least two** separate occasions and include:

- applying relevant safeworking system and workplace procedures
- assembling track layouts to plans and specifications
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant technical data, standards and drawings
- using appropriate equipment to make accurate measurements on points and crossings
- using geometric and dimension principles to ensure compliance with design
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate hand tools, power tools and equipment required to complete activities
- clearances and tolerances
- different types of timber or composite sleepers and bearers, and their individual characteristics
- documentation and record keeping requirements
- features and principles of points and crossings operation
- hazards that may exist when constructing timber or composite points and crossings, and ways of controlling the risks involved
- measurement techniques
- point and crossing manufacturer instructions, rail industry standards and workplace procedures
- problems that may occur when constructing timber or composite points and crossings, and action that can be taken to report or resolve these problems
- rail bending techniques applied to point and crossing components
- relevant safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and workplace procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- techniques for constructing timber or composite points and crossings
- workplace procedures for constructing timber or composite points and crossings.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, SDSs/MSDSs, codes of practice and operation manuals.

## **TLIS3045 Install turnouts**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to install turnouts in accordance with rail industry standards, safeworking and regulatory requirements, and workplace procedures.

It includes installing points and crossings, and completing required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit involves the application of routine operational principles and procedures when installing points and crossings, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

S – Construction and Installation

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

- |  |   |
|--|---|
| <b>1 Prepare to install turnouts</b>   | <ul style="list-style-type: none"><li>1.1 Hazards are identified, risks are assessed and control measures are implemented</li><li>1.2 Existing track work is removed from worksite</li><li>1.3 Track bed is prepared for installation of points and crossings in accordance with workplace procedures</li></ul>   |
| <b>2 Install turnouts</b>              | <ul style="list-style-type: none"><li>2.1 New points and crossings are installed in accordance with specified design, manufacturer instructions and workplace procedures</li><li>2.2 Dimensions, geometry, condition and operation are checked for compliance with rail industry standards in accordance with design, manufacturer instructions and workplace procedures</li><li>2.3 Non compliances are repaired or replaced as required in accordance with workplace procedures</li></ul> |
| <b>3 Complete installation process</b> | <ul style="list-style-type: none"><li>3.1 Documentation is filled in legibly and proofread</li><li>3.2 Documentation is completed in accordance with organisational procedures</li><li>3.3 Appropriate personnel are informed that the installation has been completed, in accordance with organisational procedures</li></ul>  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIS3045A Install turnouts.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIS3045 Install turnouts

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria by installing points and crossings on **at least two** separate occasions and include:

- applying relevant safeworking system and workplace procedures
- communicating effectively with others
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- installing points and crossings to plans and specifications
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant technical data, standards and drawings
- using appropriate equipment to make accurate measurements of points and crossings
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- clearances and tolerances
- documentation and record keeping requirements
- features and principles of operation of points and crossings
- hazards that may exist when installing points and crossings, and ways of controlling the risks involved
- measurement techniques
- point and crossing rail industry standards, manufacturer instructions and workplace procedures
- problems that may occur when installing points and crossings, and action that can be taken

to report or resolve these problems

- relevant communications systems and procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- techniques for installing points and crossings
- workplace procedures for installing points and crossings.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# **TLIS4007 Decommission mechanical signalling infrastructure and interlocking equipment from service**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to decommission mechanical signalling infrastructure equipment and interlocking equipment from service in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes disconnecting mechanical/electromechanical equipment and components; modifying, testing and adjusting remaining equipment; and certifying and securing operational mechanical equipment in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines as they apply to decommissioning mechanical signalling infrastructure and interlocking equipment from service.

Work is performed under minimal supervision, generally within a team environment.

It involves the application of routine operational principles and procedures when decommissioning mechanical signalling infrastructure equipment and interlocking equipment from service, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

S – Construction and Installation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Disconnect mechanical/interlocking equipment and components**

1.1 Required authorisation is confirmed to ensure safe train operations may continue after mechanical/interlocking equipment components are disconnected

1.2 Hazards are identified, risks are assessed and control measures are implemented

1.3 Mechanical/interlocking equipment and components are prepared to enable ready removal

1.4 Mechanical/interlocking equipment components are removed from operational area and area is made safe

### **2 Modify, test and adjust remaining equipment**

2.1 Remaining equipment is modified as necessary to ensure compliance with job specifications

2.2 Correct test equipment and procedures are identified

2.3 Appropriate tests are correctly carried out in conjunction with other personnel to ensure operational compliance

### **3 Certify and secure operational equipment**

3.1 Operational readiness is confirmed and required documentation/certification is correctly completed and processed to allow for commissioning

3.2 Equipment is locked and secured to ensure against unauthorised interference

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIS4007A Decommission mechanical signalling infrastructure and interlocking equipment from service.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIS4007 Decommission mechanical signalling infrastructure and interlocking equipment from service

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- applying relevant legislation and workplace procedures
- applying repair and testing practices and procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- modifying, adjusting and testing remaining equipment correctly
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures, information, technical data and drawings
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- using hand and power tools
- using test equipment and testing techniques
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- fault diagnosis, fault rectification and problem solving
- hazards that may exist when decommissioning mechanical signalling infrastructure equipment and interlocking equipment from service, and ways of controlling the risks involved
- limitations and characteristics of mechanically operated signalling equipment
- principles of signalling
- problems that may occur when decommissioning mechanical signalling infrastructure equipment and interlocking equipment from service, and action that can be taken to report or resolve these problems
- rail industry standards for decommissioning mechanical signalling infrastructure equipment and interlocking equipment from service
- relevant rail danger zones
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant recording and documentation procedures
- repair techniques
- testing and measuring procedures
- workplace procedures for decommissioning mechanical signalling infrastructure equipment and interlocking equipment from service.
- 
- 

## Assessment Conditions

# **TLIU0001 Develop workplace policy and procedures for environmental sustainability**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to develop and implement workplace environmental sustainability policy and procedures.

It includes developing, communicating and implementing a workplace environmental sustainability policy as well as reviewing and modifying this policy when circumstances change.

Environmental sustainability policy can involve an integrated approach to sustainability, which includes environmental, economic and social aspects, or a narrower one to focus on each aspect individually.

This unit applies to individuals who address the knowledge, processes and techniques necessary to develop approaches to environmental sustainability within workplaces, including the development and implementation of policy.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

U – Environment

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

### **ELEMENTS**

### **PERFORMANCE CRITERIA**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Develop workplace environmental sustainability policy**

- 1.1 Scope of policy is defined
- 1.2 Stakeholders are identified and consulted as a key component of the policy development process
- 1.3 Strategies for minimising resource use, reducing toxic material and hazardous chemical use, and employing life cycle management approaches at all work stages are included in the policy
- 1.4 Recommendations are made for policy options based on likely effectiveness, timeframes and cost
- 1.5 Organisational commitment to environmental sustainability as an integral part of business planning and as a business opportunity is reflected in policy developed
- 1.6 Appropriate methods of implementation are agreed

**2 Communicate the policy**

- 2.1 Policy, including its expected outcomes, is promoted to key stakeholders
- 2.2 Those involved in implementing the policy are informed of outcomes expected and activities to be undertaken, and responsibilities are assigned accordingly

**3 Implement the policy**

- 3.1 Procedures to implement the policy are developed and communicated
- 3.2 Resource efficiency continuous improvement strategies are implemented
- 3.3 Provision for staff training to incorporate resource efficiency procedures is made
- 3.4 Record systems for tracking continuous improvement in environmental sustainability approaches are established and responsibilities are assigned accordingly

**4 Review policy implementation**

- 4.1 Outcomes are documented and feedback is provided to key personnel and stakeholders
- 4.2 Success or otherwise of policy is investigated
- 4.3 Records are monitored to identify trends that may require remedial action and are used to promote continuous

improvement of performance

4.4 Policy and/or procedures are modified as required to ensure required improvements are made

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIU4010A Develop workplace policy and procedures for sustainability.

## **Links**

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIU0001 Develop workplace policy and procedures for environmental sustainability

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying change management techniques
- applying quality assurance practices
- applying strategic and complex problem solving techniques
- communicating effectively verbally and in writing
- conducting feasibility studies
- developing strategies for eco driving and energy efficiency solutions
- developing, implementing, communicating and validating organisational environmental sustainability policy
- developing and applying diagnostic techniques
- developing performance measures for:
  - correct use of equipment and vehicles
  - minimising fuel consumption
  - equipment and vehicle maintenance and servicing
- reading and interpreting complex and formal documents
- researching, planning and evaluating environmental and energy efficiency requirements
- managing risk
- planning and organising work
- thinking strategically
- using emergency and personal protective equipment
- using information technology and a range of computer software programs to manage and store information
- working in a team
- writing precise and comprehensive reports for different audiences.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- environmental issues relating to:
  - life cycle of products: re-new, re-use and recycle
  - relevant environmental regulations
  - renewable energy
- environmental organisational policies, procedures and protocols
- environmental sustainability policy management strategy features:
  - contract requirements
  - energy efficiency systems and procedures
  - internal and external audits
  - training and monitoring of personnel performance following training
  - waste prevention and minimisation
  - environmental education
  - marketing principles and stakeholder identification strategies
  - recycling requirements
  - quality assurance systems and best practice models
  - reviewing effectiveness of new procedures and processes
  - targets for carbon emissions reduction, cleaner production and lean management
  - work and supply chain procedures
- policy development processes and practices
- relevant legislative and regulatory requirements, and codes of practice
- work health and safety (WHS)/occupational health and safety (OHS) requirements relating to:
  - dangerous goods and hazardous substances
  - WHS/OHS hierarchy of control.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in

simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# **TLIU1009 Monitor plant and equipment in an environmentally sustainable manner**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to monitor plant and equipment in an environmentally sustainable manner, in accordance with relevant state/territory environmental protection regulations, guidelines and workplace procedures.

It includes minimising the effects of pollution when operating and monitoring plant and equipment. It also includes transporting and handling environmentally hazardous materials safely.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

U – Environment

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Minimise pollution effects during operations**

1.1 Precautions are taken to ensure spilt fuel, lubricants and chemicals do not pollute the environment

1.2 Plant and equipment are operated efficiently to minimise air pollution through excessive exhaust emissions

1.3 Running of plant and equipment is minimised to avoid unnecessary noise and air pollution

1.4 Worksites are kept clean and tidy during work operations and waste is disposed of in accordance with environmental protection regulations and workplace procedures

**2 Minimise pollution effects when monitoring plant and equipment**

2.1 Routine checks are conducted or organised to ensure plant and equipment are operating correctly including emission controls where fitted

2.2 Suitable precautions are taken when cleaning plant and equipment not to pollute the environment

2.3 Care is taken during services and maintenance operations to implement housekeeping procedures and environmental protection precautions and procedures

2.4 Rubbish is deposited in designated rubbish disposal bins

**3 Transport/handle environmentally hazardous materials safely**

3.1 Relevant documentation is completed in accordance with government regulations and workplace requirements

3.2 Waste and effluent are disposed of in accordance with government regulations and workplace procedures

3.3 Environmentally hazardous materials are handled and moved in accordance with relevant regulations, workplace procedures and guidelines aimed at minimising the risk of environmental pollution

3.4 Routes for plant and equipment carrying hazardous and noxious loads are planned to minimise risk to the environment in an accident or spillage

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIU1009A Monitor plant and equipment in an environmentally sustainable manner.

## Links

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIU1009 Monitor plant and equipment in an environmentally sustainable manner

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with standard operating procedures
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- following routine service and maintenance procedures for equipment and vehicles
- identifying and correctly using equipment and vehicles in accordance with environmental protection regulations and guidelines
- identifying suitable disposal and transport methods of hazardous or noxious materials
- identifying suitable precautions to prevent plant and equipment from polluting the environment
- interpreting and following operational instructions and prioritising work
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures and information
- recognising potential pollution risks and ways of minimising these risks
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of relevant environmental protection regulations and requirements
- emission control checking requirements for plant and equipment
- environmental hazards and toxicity of materials typically carried in loads
- environmental protection standards required in the workplace
- environmental risks when carrying out workplace operations, and related precautions to control the risk
- procedures and processes for waste and effluent regulation
- relevant environmental protection regulations
- service and maintenance procedures and checklists for equipment and vehicles
- site layout including location of rubbish disposal bins
- typical problems that can occur when caring for the environment, and appropriate action that can be taken to prevent or solve these problems
- workplace procedures and guidelines monitoring plant and equipment in an environmentally sustainable manner during workplace operations.
- 

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIU1013 Prepare for environmentally sustainable work practices

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to prepare for environmentally sustainable work practices in the transport and logistics industry.

It includes identifying industry environmental sustainability information and work practices, including applicable legislation, national standards, industry procedures and work health and safety (WHS)/occupational health and safety (OHS) requirements.

It entails developing an understanding of developed strategies, systems and plans pertaining to environmentally sustainable work practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

U – Environment

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify industry

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1.1 Workplace environmental and resource efficiency issues

**environmentally sustainable information**

are identified

1.2 Range of issues relevant to employment in transport and logistics, including the application of legislation and national standards, industry procedures and WHS/OHS requirements, are assessed from an environmental sustainability point of view

**2 Identify industry environmentally sustainable work practices**

2.1 Reasons for environmental sustainability action are identified

2.2 Appropriate transport and logistics environmentally sustainable work practices are listed

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIU1013A Prepare for environmentally sustainable work practices.

# Assessment Requirements for TLIU1013 Prepare for environmentally sustainable work practices

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- complying with work health and safety (WHS)/occupational health and safety (OHS) standards
- identifying reasons for environmentally sustainable work practices
- identifying transport and logistics environmentally sustainable work practices
- reading and interpreting work requirements or safety data sheets (SDSs)/material safety data sheets (MSDSs).

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

environmental issues relating to:

- life cycle of products: re-new, re-use and recycle
- workplace/site
- service requirements for transport and logistics, including:
  - company requirements and structure
  - legislation, regulations and codes of practice applicable to specific transport and logistics functions
  - selecting, operating, cleaning and maintaining equipment
  - resource efficiency processes
  - transport and logistics environmental options and best practices
  - supply chain procedures
  - relevant enterprise policies, procedures and protocols
  - duty of care
- sustainability management principles, practices, tools and techniques relevant to transport

and logistics, such as:

- correct use of equipment according to environmental protection regulations and guidelines
- techniques for minimising fuel/materials consumption
- WHS/OHS requirements relating to the WHS/OHS hierarchy of control.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

# TLIU2008 Apply environmental procedures to rail infrastructure

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to care for the environment during rail infrastructure maintenance and construction activities in accordance with rail industry standards, safeworking and regulatory requirements, and workplace procedures.

It includes minimising the effects of pollution during work, and transporting and handling hazardous materials safely in accordance with environmental protection regulations and guidelines.

Work must be carried out in accordance with relevant state/territory environmental protection regulations and workplace procedures.

Work is performed under some supervision generally within a team environment.

It involves the application of basic environmental protection principles and regulations when undertaking rail infrastructure maintenance and construction activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

U – Environment

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Minimise the effects of pollution during work**

- 1.1 Precautions are taken to ensure spilt fuel, lubricants, chemicals and noxious plants do not pollute the environment
- 1.2 Equipment and vehicles are operated efficiently to minimise air pollution through excessive exhaust emissions
- 1.3 Unnecessary running of engines/equipment is avoided to minimise air pollution
- 1.4 Worksites are kept clean and tidy during work operations and waste is disposed of in accordance with environmental regulations and workplace procedures
- 1.5 Contaminants from worksites are contained by use of appropriate traps and barriers
- 1.6 Noise pollution from work is minimised

### **2 Minimise the effects of pollution during maintenance**

- 2.1 Housekeeping and environmental protection precautions and procedures are implemented during maintenance and construction activities
- 2.2 Rubbish is deposited in designated rubbish disposal bins

### **3 Avoid environmental damage**

- 3.1 Sensitive sites in the work vicinity are identified
- 3.2 Suitable precautions are taken to avoid damage to identified sensitive sites

### **4 Transport/handle environmentally hazardous materials safely**

- 4.1 Instructions contained in safety data sheets (SDSs)/material safety data sheets (MSDSs) for safe transportation requirements are followed in accordance with Australian Dangerous Goods Code and workplace requirements
- 4.2 Contaminants are disposed of in accordance with relevant regulations, workplace procedures and guidelines
- 4.3 Environmentally hazardous materials are handled and moved in accordance with relevant regulations, and workplace procedures and guidelines aimed at minimising the risk of environmental pollution

## **5 Report environmental breaches**

- 5.1 Environmental breaches are identified
- 5.2 Workplace procedures for reporting environmental breaches are implemented
- 5.3 Required documentation is completed and processed in accordance with relevant regulations and workplace procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIU2008A Apply environmental procedures to rail infrastructure.

## **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIU2008 Apply environmental procedures to rail infrastructure

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with operating procedures
- applying relevant workplace procedures
- disposing of waste and effluent in accordance with regulations and workplace procedures
- following relevant workplace procedures, safety data sheets (SDSs)/material safety data sheets (MSDSs) and regulatory requirements for handling and moving pollutants
- following routine service and maintenance procedures for equipment and vehicles
- identifying and correctly using equipment and vehicles in accordance with environmental protection regulations and guidelines
- identifying culturally sensitive sites
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying the pollution likely to affect the workplace and the effect on the job role
- implementing contingency plans
- interpreting and following operational instructions and performing work tasks in required sequence
- minimising the effects of a number of different pollutants during work in a variety of situations
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures and information
- recognising potential pollution risks and ways of minimising them
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- undertaking precautions to prevent polluting the environment within the workplace.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of relevant environmental protection regulations and requirements including site specific licence and trade waste requirements
- emission control checking requirements for vehicles and relevant equipment
- environmental hazards and toxicity of materials typically carried in loads
- environmental protection standards required when undertaking rail infrastructure maintenance and construction activities
- environmental risks when undertaking rail infrastructure maintenance and construction activities and related precautions to control the risk
- physical environment in which rail safety work is to be carried out, including climatic conditions, noise, vibration and fumes
- procedures and processes for waste and effluent regulation
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental protection regulations
- SDSs/MSDSs
- service and maintenance procedures
- site layout including location of rubbish disposal bins and run-off protection measures
- typical problems that can occur when caring for the environment, and appropriate action that can be taken to prevent or solve these problems
- workplace procedures and guidelines for caring for the environment during rail infrastructure maintenance and construction.
- 

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment

currently used in industry

- applicable documentation including workplace procedures, regulations, rail industry standards, SDSs/MSDSs, codes of practice and operation manuals.

# TLIU2012 Participate in environmentally sustainable work practices

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to participate in environmentally sustainable work practices.

It includes identifying current resource usage, complying with environmental regulations and implementing performance improvement strategies to reduce negative environmental impacts of work practices.

This unit applies to individuals who work with others, often in a team environment and who participate in environmentally sustainable work practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

U – Environment

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify current resource

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1.1 Workplace environmental and resource efficiency issues

<b>use</b>	are identified
	1.2 Resources used in own work role are identified
	1.3 Current use of identified resources is documented in relation to identified workplace environmental and resource efficiency issues
<b>2 Comply with environmental regulations</b>	2.1 Workplace environmental hazards are identified and reported to appropriate personnel
	2.2 Organisational procedures are followed to ensure compliance with environmental regulations
	2.3 Environmental breaches or potential breaches are reported to appropriate personnel
<b>3 Implement performance improvement strategies</b>	3.1 Organisational plans to improve environmental practices and resource efficiency are followed
	3.2 Suggestions are made for improvements to workplace practices in own work area

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIU2012A Participate in environmentally sustainable work practices.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIU2012 Participate in environmentally sustainable work practices

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assisting with enterprise plans to improve resource efficiency
- communicating effectively with others when questioning, listening, liaising and imparting knowledge
- complying with environmental regulations
- identifying and measuring current resource use
- identifying and minimising hazards and risks
- organising work methodically and prioritising duties
- reading and interpreting job sheet, work requirements or safety data sheets (SDSs)/material safety data sheets (MSDSs)
- solving problems
- working in a team
- working safely and efficiently
- writing reports.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

environmental issues relating to:

- life cycle of products: re-new, re-use and recycle
- workplace/site
- features of an environmental management strategy:
  - contract requirements
  - energy efficiency systems and procedures
  - procedures and processes

- targets, such as:
  - carbon emissions reduction
  - cleaner production
  - lean management
- work health and safety (WHS)/occupational health and safety (OHS) requirements relating to:
  - dangerous goods and hazardous substances
  - WHS/OHS hierarchy of control
- sustainability management principles, practices, tools and techniques relevant to the transport and logistics industry context, such as:
  - the correct use of equipment and vehicles according to environmental protection regulations and guidelines
  - techniques for minimising fuel/materials consumption
- service requirements for transport and logistics, including:
  - selecting, operating, cleaning and maintaining equipment
  - company requirements and structure
  - duty of care
  - legislation, regulations and codes of practice applicable to specific transport and logistics functions
  - relevant enterprise policies, procedures and protocols
  - relevant competency
  - resource efficiency processes
  - stakeholder identification
  - supply chain procedures
  - transport and logistics environmental options and best practices.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# **TLIU3011 Implement and monitor environmentally sustainable work practices**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to implement improvements and to monitor sustainable work practices, including developing processes and tools.

It includes investigating current practices in relation to resource usage, setting target improvements, implementing performance improvement strategies and monitoring performance.

It applies to those who have responsibility for a specific area of work or who lead a work group or team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

U – Environment

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

Elements describe the                      Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

**1 Investigate current practices in relation to resource usage**

- 1.1 Environmental regulations applying to the organisation are identified
- 1.2 Procedures for assessing compliance with environmental regulations are assessed
- 1.3 Information on environmental and resource efficiency systems and procedures is collected and is provided to work group as required
- 1.4 Current resource usage of work group members and organisation within own area of responsibility, is measured and documented
- 1.5 Current purchasing strategies are analysed and documented
- 1.6 Current work processes are analysed to access information and data and assist in identifying areas for improvement

**2 Set target improvements**

- 2.1 Input is sought from stakeholders, relevant personnel and specialists
- 2.2 External sources of information and data are accessed as required

**3 Implement performance improvement strategies**

- 3.1 Techniques/tools are sourced to assist in achieving targets
- 3.2 Continuous improvement strategies are applied to own work area of responsibility, and ideas and possible solutions are communicated to work group and management
- 3.3 Work group environmental and resource efficiency improvement plans are integrated with other operational activities and implemented
- 3.4 Work group members are trained in new procedures to facilitate environmental and resource efficiency improvements as required
- 3.5 Suggestions and ideas about environmental and resource efficiency management are sought from stakeholders and acted upon where appropriate
- 3.6 Costing strategies are implemented to fully value environmental assets

- 4 Monitor performance**
- 4.1 Outcomes are documented and feedback is provided to relevant personnel and stakeholders
  - 4.2 Strategies are evaluated
  - 4.3 New targets are set, and new tools and strategies are investigated and applied
  - 4.4 Successful strategies are promoted and, where possible, participants are rewarded

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIU3011A Implement and monitor environmentally sustainable work practices.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIU3011 Implement and monitor environmentally sustainable work practices

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing effectiveness of approaches taken
- applying change management techniques
- applying quality assurance practices
- communicating effectively when questioning, listening and liaising with others
- identifying and minimising hazard and risks
- identifying and measuring current resource use
- implementing and monitoring organisational strategies to improve environmental practices and resource efficiency
- organising work practices safely and efficiently
- reading and interpreting organisational policy and environmental and energy efficiency requirements
- setting targets to improve environmental practices and resource efficiency
- solving complex problems
- using emergency and personal protective equipment appropriately
- using information technology and computer software to complete tasks
- working in a team to consult on and validate policy
- writing reports for a range of audiences that use precise expression, clear language and a logical structure.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- environmental issues relating to
- life cycle of products: re-new, re-use and recycle

- relevant environmental regulations
- renewable energy
- workplace/site
- features required for an environmental management strategy:
- contract requirements
- energy efficiency systems and procedures
- training outline
- waste minimisation
- waste prevention
- work procedures
- environmental education
- past and future reviews and audits relating to environmental management
- recycling requirements
- internal and external audit
- monitoring personnel performance following training
- quality control checks relating to environmental management
- review of effectiveness of new procedures and processes
- targets, such as carbon emissions reduction, cleaner production, lean management
- how to adjust communication to suit different audiences
- how to work with different points of view and dissenting stakeholders
- principles, practices and available sustainability management tools and techniques relevant to the transport and logistics industry context, such as
- correct use of equipment and vehicles, in accordance with environmental protection regulations and guidelines
- minimising fuel consumption
- maintenance and servicing
- service requirements for transport and logistics, including
- organisational requirements and structure, including workplace communications channels and procedures
- training staff
- legislation, regulations and codes of practice applicable to specific transport and logistics management functions
- quality assurance systems relevant to transport
- transport and logistics options and best practices
- supply chain procedures
- relevant organisational policies, procedures and protocols
- material recovery opportunities and market availability
- market principles
- stakeholder identification
- planning and related approval processes

- resource recovery infrastructure needs
- relevant competency
- duty of care.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIU4001 Implement and monitor environmental protection policies and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to implement and monitor environmental protection policies and procedures.

It includes accessing relevant information concerning environmental protection regulations and procedures as well as implementing and monitoring environmental hazard procedures, related control procedures, environmental training arrangements and required records and documentation.

People achieving competence in this unit will need to comply with relevant national, state/territory legislative and regulatory requirements and codes of practice.

Work is generally performed within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

U – Environment

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Access information about environmental protection regulations and procedures**

- 1.1 Relevant provisions of environmental legislation and codes of practice are accurately followed
- 1.2 Information on workplace environmental policies, procedures and programs is stored in a readily accessible location, in accordance with workplace procedures
- 1.3 Information is accurately and clearly explained to the work team and updated in accordance with workplace policy changes
- 1.4 Information about the outcomes of environmental risk identification and control procedures is provided to appropriate personnel

**2 Implement and monitor environmental hazard procedures**

- 2.1 Existing and potential environmental hazards in the workplace are identified and reported
- 2.2 Identified hazards are assessed in relation to relevant environmental protection policies
- 2.3 Workplace procedures for dealing with hazardous events are implemented to ensure that prompt control action is taken
- 2.4 Hazardous events are investigated to identify causes, and control measures are implemented to prevent recurrence and minimise risks of such events

**3 Implement and monitor environmental control procedures**

- 3.1 Existing environmental protection measures are implemented, monitored and reviewed
- 3.2 Environmental protection procedures are implemented and work group adherence to them is monitored
- 3.3 Required improvements to existing control measures are identified, including required resources for implementation, and reported to appropriate personnel

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIU4001A Implement and monitor environmental protection policies and procedures.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIU4001 Implement and monitor environmental protection policies and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- carrying out training needs analysis relevant to workplace requirements
- communicating and working effectively with others orally and in writing when implementing and monitoring environmental protection procedures
- completing documentation related to implementing and monitoring environmental protection procedures
- counselling, advising and informing others on environmental protection matters
- identifying and correctly using equipment and vehicles in accordance with environmental protection regulations and guidelines
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- providing leadership and working collaboratively with others when implementing and monitoring environmental protection procedures
- reading and interpreting instructions, procedures, information and signs relevant to implementing and monitoring environmental protection procedures
- recognising potential environmental risks and ways of minimising them
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment, conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- equipment and resources required when implementing and monitoring environmental protection, and instructions for their use
- hierarchy of control principles for environmental risks (including preferred models for risk elimination, engineering controls, administrative controls and specific environmental protection techniques)
- problems that can occur when implementing and monitoring environmental protection procedures
- relevant management systems and procedures for environmental management
- relevant national, state/territory legislative and regulatory requirements and codes of practice
- significance of equal employment opportunity (EEO) principles and practice for environmental management
- workplace environmental hazards and related hazard control measures
- workplace environmental operational risks and related precautions to control these risks
- workplace environmental protection standards
- workplace procedures and guidelines for implementing and monitoring environmental protection
- workplace reporting and recording processes and procedures.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIU4011 Apply environmental procedures to rail operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to care for the environment during rail operations in accordance with rail industry standards, safeworking and regulatory requirements, and organisational procedures.

It includes minimising the effects of pollution during work, reporting environmental breaches and completing documentation, in accordance with environmental protection regulations and guidelines.

Work must be carried out in accordance with relevant state/territory environmental protection regulations and organisational procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

U – Environment

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the            Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

### **1 Minimise effects of pollution during work**

1.1 Precautions are taken to ensure spilt fuel, lubricants, chemicals and noxious plants do not pollute the environment

1.2 Equipment and vehicles are operated efficiently to minimise air pollution through excessive exhaust emissions

1.3 Unnecessary running of engines/equipment is avoided to minimise air pollution

1.4 Workplaces are kept clean and tidy during work operations and waste is disposed of in accordance with environmental regulations and organisational procedures

1.5 Noise pollution from work is minimised

### **2 Respond to environmental incidents**

2.1 Hazards are identified and extent of potential impact is determined

2.2 Appropriate personal protective equipment is identified, selected and worn/used as required

2.3 Hazards are managed or isolated as required or as instructed

2.4 Actions are taken to minimise environmental impact

2.5 Incident is reported to relevant personnel in accordance with organisational procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIU4011A Apply environmental procedures to rail operations.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIU4011 Apply environmental procedures to rail operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with operating procedures
- completing relevant documentation/communications
- identifying and correctly using equipment and vehicles in accordance with environmental protection regulations and guidelines, and workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures and information
- recognising potential pollution risks and ways of minimising them
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and organisational procedures
- selecting and using required personal protective equipment conforming to industry, work health and safety (WHS)/occupational health and safety (OHS) and environmental codes of practice.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- environmental hazards and toxicity of materials typically carried in loads
- environmental protection standards required for rail operation activities
- environmental risks when undertaking rail operations and related precautions to control

these risks

- geographical location of waterways and environmentally sensitive areas
- how to use correct containment tools
- relevant information/documents
- relevant safety, WHS/OHS and environmental protection regulations
- relevant workplace housekeeping procedures and instructions
- service and maintenance procedures
- site layouts including location of waste disposal bins and spill kits
- typical problems or incidents that can occur when caring for the environment while undertaking rail operations, and appropriate action that can be taken to prevent or solve these problems.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIU5006 Conduct environmental audits

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to conduct an environmental audit in accordance with relevant environmental protection regulatory requirements, standards, codes of practice and workplace procedures.

It includes preparing and conducting an environmental audit, scheduling an internal audit, documenting the findings and reporting on the results.

Work is carried out under general guidance on progress and outcomes. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

The unit applies to those with responsibility for resource coordination and allocation, who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

U – Environment

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Prepare for environmental audit**
  - 1.1 Relevant legislation, authority and enterprise requirements pertinent to workplace operations are identified and followed
  - 1.2 Practices and facilities required to be audited are identified and implications of non-conformance are established
  - 1.3 Technical and/or calibration requirements for audits are noted and appropriate support personnel are identified as required
  - 1.4 Work schedules are investigated to identify appropriate schedule for audit
- 2 Schedule environmental internal audit**
  - 2.1 Audit timings are planned to ensure relevant procedures are conducted within workplace agreed time intervals and timeframes
  - 2.2 Audit frequency is adjusted to ensure minimal disruption to the workplace
  - 2.3 Contact is made with appropriate personnel and audit appointments are made
- 3 Conduct environmental audit and document findings**
  - 3.1 Operational procedures and assessment methods for the environmental audit are confirmed with personnel concerned
  - 3.2 Observations and interviews are conducted with approved third party as required
  - 3.3 Documentation of observations and interview responses is completed
- 4 Report environmental audit results**
  - 4.1 Outcomes of the audit process are compared to workplace procedures
  - 4.2 Audit results are discussed with relevant personnel
  - 4.3 Reports of non-compliance are documented and options for system improvements are recommended
  - 4.4 Reports are forwarded to appropriate personnel for action

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIU5006A Conduct environmental audits.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIU5006 Conduct environmental audits

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating effectively with others when conducting an environmental audit
- completing documentation related to conducting an environmental audit
- interpreting and following operational instructions and prioritising work
- modifying activities to cater for variations in workplace contexts and environment
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- planning and organising environmental audit activities
- providing leadership and working collaboratively with others when conducting an environmental audit
- reading and interpreting instructions, technical data, regulatory requirements and workplace policies and procedures relevant to conducting an environmental audit
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and applying appropriate technology, information systems and procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of relevant Australian standards and associated certification requirements
- audit procedures and compliance implementation strategies
- environmental risk management and control procedures
- environmental safety regulatory and guidance material
- equipment applications, capacities, configurations, safety hazards and control
- hazards that may exist when conducting an environmental audit and ways of controlling the risks involved
- operation of workplace in relation to potential environmental risks and control/prevention measures
- problems that may occur when conducting an environmental audit and action to be taken to report or resolve these problems
- relevant work health and safety(WHS)/occupational health and safety (OHS) and environmental protection procedures and regulations, including the Australian Dangerous Goods (ADG) Code where applicable
- relevant workplace documentation procedures
- resource availability including the competencies of individuals in the team/group
- workplace business policies and plans including procedures for identifying non-compliance and best practice
- workplace processes for conducting an environmental audit.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

## **TLIW0036 Apply electric welding process to rail**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to weld rails, crossings and switches using an electric welding process in accordance with rail industry standards, safeworking and regulatory requirements, and workplace procedures.

It includes using non-destructive testing to locate defects; preparing rails, crossings or switches for welding; gouging or grinding; setting up welding equipment; performing welding operations; checking weld conformance; and completing required documentation. These processes are used to repair rail surface defects and restore rail profile to plain rail, crossings and switches.

People achieving competence in this unit will need to fulfil applicable state/territory legislated rail safety requirements and to comply with rail industry standards, codes of practice and/or guidelines.

Work is performed under some supervision, generally in a team environment. It involves the application of routine operational principles and procedures when welding rail using an electric welding process, as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

W – Equipment and Systems Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare rails, crossings or switches for welding**

- 1.1 Weld repair area is identified and assessed in accordance with standards and procedures
- 1.2 Welding equipment and consumables are prepared and checked for serviceability
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Weld repair area is prepared for welding in accordance with workplace standards and procedures
- 1.5 Track components are assembled or aligned to specification as required

#### **2 Use non-destructive testing**

- 2.1 Appropriate non-destructive testing method is selected in accordance with workplace requirements
- 2.2 Non-destructive testing method is used to identify and locate defects in accordance with rail industry standards and organisational procedures

#### **3 Assemble and set up welding equipment**

- 3.1 Welding equipment is set up and adjusted to meet welding process requirements
- 3.2 Accessories and consumables are selected for use

#### **4 Assemble and set up gouging and grinding equipment**

- 4.1 Gouging and grinding equipment is assembled and set up
- 4.2 Equipment settings are adjusted to meet process requirements
- 4.3 Accessories and consumables are selected for use

#### **5 Remove defects**

- 5.1 Appropriate method to be used to remove defect is identified in accordance with organisational standards

- and procedures
- 5.2 Defect is removed using identified method in accordance with organisational standards and procedures
- 6 Perform welding operation**
- 6.1 Weld metal is applied to repair area to meet specifications in accordance with standards and procedures
- 6.2 Welded area is cleaned in preparation for grinding
- 6.3 Welded area is ground in accordance with organisational standards and procedures
- 7 Check weld conformance**
- 7.1 Finished ground weld area is visually inspected for surface finish and defects
- 7.2 Finished ground weld area is checked for conformance to rail, crossing or switch profile acceptance standards
- 8 Complete post-operative checks and documentation**
- 8.1 Equipment is checked for serviceability
- 8.2 Defective equipment is replaced and reported for servicing or repair in accordance with organisational policies and procedures
- 8.3 Documentation on work undertaken is completed and processed in accordance with organisational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW0036A Apply electric welding process to rail.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIW0036 Apply electric welding process to rail

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least five** separate occasions and include:

- applying relevant workplace procedures
- ensuring weld conformance to organisational requirements
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work when welding rail using an electric welding process
- modify activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- performing welding, grinding, gouging and testing operations on rails, crossings and switches in accordance with rail industry standards and/or workplace requirements
- preparing items for welding in accordance with workplace requirements
- reading and interpreting relevant technical data, drawings, instructions and manuals
- reporting and rectifying problems, faults and malfunctions within limits of own role, in accordance with organisational procedures
- selecting and using hand tools, power tools and equipment
- selecting and using required personal protective equipment
- using non-destructive (liquid penetrant or magnetic particle) testing equipment, gouging equipment and hand grinding equipment in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs), manufacturer instructions and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- authorisation/approval processes and procedures
- documentation and record keeping requirements
- fundamentals of track and components
- hazards that may exist when welding rail using an electric welding process and ways of controlling the risks involved
- problems that may occur when welding rail using an electric welding process and action that can be taken to report or resolve these problems
- rail industry acceptance standards for weld repairs on rail
- relevant rail danger zones
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- track industry standards for rail, crossing and switch condition and surface profile
- workplace procedures, safety data sheets (SDSs)/material safety data sheets (MSDSs) and manufacturer instructions for non-destructive (liquid penetrant or magnetic particle) testing of rail
- workplace procedures for removing defects by gouging, grinding and welding rail using an electric welding process.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, SDSs/MSDSs, codes of practice and operation manuals.

# **TLIW0044 Weld rail on tram/light rail systems using submerged ARC welding process**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to weld rail on tram/light rail systems using a submerged arc welding process.

It covers preparing materials, selecting and setting up welding equipment, carrying out submerged arc welding, inspecting for and correcting defects, and maintaining weld records.

Welds would mainly involve building up or pad welding on longer lengths of rail on tram/light rail systems. It covers welding both the rail head and the check rail.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

W – Equipment and Systems Operations

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Prepare for welding**
  - 1.1 Weld requirements are identified from specifications and/or technical drawings
  - 1.2 Rail surface is correctly prepared using tools and techniques appropriate to the material and process
  - 1.3 Materials are assembled/aligned to specifications as required
  - 1.4 Track is measured prior to commencement of welding
  - 1.5 Welding machine settings and consumables are identified from job requirements, welding procedures, specifications and/or technical drawings
  - 1.6 Hazards are identified, risks are assessed and control measures are implemented
- 2 Assemble and set up equipment**
  - 2.1 Welding equipment is assembled and set up safely and correctly in accordance with operating procedures
  - 2.2 Defective equipment is tagged and replaced in accordance with organisational and manufacturer specifications
- 3 Weld rail using submerged arc process**
  - 3.1 Pad, butt and fillet welds are deposited correctly in flat and fillet welds in horizontal position in accordance with specifications
  - 3.2 Joints are cleaned to specifications using techniques and tools appropriate to the defect, material and process
- 4 Inspect welds and correct faults**
  - 4.1 Weld joints are visually inspected against specifications
  - 4.2 Track is measured to ensure welded track is within accepted tolerances
  - 4.3 Weld defects are identified and remedial action is taken, where required
  - 4.4 Defects are removed with minimum loss of sound metal using techniques and tools appropriate to the defect, material and process
- 5 Maintain weld records**
  - 5.1 Weld records are filled in legibly and proofread
  - 5.2 Weld records are processed in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW0044A Weld rail on tram/light rail systems using submerged arc welding process.

## **TLIW2001 Operate under track protection rules**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to operate under track protection rules in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes accessing and interpreting information about track protection requirements, carrying out assigned protection and/or work activities, and responding appropriately to safety incidents and abnormal situations.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of relevant track protection rules and requirements to assigned track work activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

W – Equipment and Systems Operations

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Access and interpret information about track protection requirements**

1.1 Information about track protection requirements relevant to work activities is sought and obtained/received in accordance with workplace procedures and the requirements of the relevant safeworking system

1.2 Information about relevant track protection requirements is interpreted and applied to work activities in accordance with workplace instructions

### **2 Carry out assigned protection and/or work activities**

2.1 Assigned protection and/or work activities are carried out with others in accordance with safeworking rules and workplace procedures

2.2 Protection system and equipment is constantly reviewed in accordance with workplace procedures to ensure ongoing protection

2.3 Liaison is maintained with relevant authority/personnel to ensure maximum protection is maintained

2.4 Documentation and records required under safeworking rules are completed and processed/filed in accordance with workplace procedures

### **3 Respond appropriately to abnormal situations**

3.1 Abnormal situations, safety incidents and emergencies are identified in accordance with safeworking rules and workplace procedures

3.2 Identified abnormal situations, safety incidents and emergencies are promptly reported to relevant personnel and action is taken within limits of responsibility, in accordance with workplace procedures

3.3 Reports and records of identified abnormal situations, safety incidents and emergencies together with related action taken, are completed and processed/filed in accordance with safeworking rules and workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW2001A Operate under track protection rules.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIW2001 Operate under track protection rules

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking rules and workplace procedures
- communicating effectively with others
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant safeworking rules, workplace procedures and terminology, as defined by the Rail Infrastructure Manager
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- rail terminology as defined in the applicable Rail Infrastructure Manager safeworking rules
- relevant state/territory legislated rail safety requirements, codes of practice, rules and/or guidelines
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- safeworking rules and workplace procedures as they relate to the work activities

concerned.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace rail operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment, and personal protective equipment currently used in rail industry
- applicable documentation with terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

## **TLIW2012 Grind rails**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to grind rail and welds in accordance with rail industry standards, safeworking and regulatory requirements, and workplace procedures.

It includes determining job requirements, grinding weld and/or weld repair, grinding rail to repair surface defects, and completing all required documentation. This competency relates to the grinding of new welds and weld repairs, wheel burns, rail batter and overflow in plain track.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when grinding rail and welds, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

W – Equipment and Systems Operations

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Determine job requirements**

- 1.1 New welds and weld repairs are located
- 1.2 Defects relating to wheel burns, rail battering and rail overflow are identified
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Appropriate equipment is selected
- 1.5 Appropriate repair method and/or profile is selected to ensure completed work will meet specifications
- 1.6 Site is cleared of obstructions and combustible material

### **2 Grind weld and/or weld repair**

- 2.1 Rail is ground to profile using approved equipment in accordance with workplace procedures
- 2.2 Grinding equipment is operated safely in accordance with work health and safety (WHS)/occupational health and safety (OHS) and environmental requirements
- 2.3 Rail gauge face is ground to match adjacent rail in curves, in accordance with standards and procedures
- 2.4 Rail profile and vertical and horizontal alignment are measured to ensure compliance with acceptance standards
- 2.5 Rail surface condition is assessed for compliance with acceptance standards

### **3 Grind rail to repair surface defects**

- 3.1 Rail is ground using approved equipment in accordance with workplace procedures
- 3.2 Grinding equipment is operated safely in accordance with WHS/OHS and environmental requirements
- 3.3 Finished surface is checked to ensure compliance with specification

### **4 Complete documentation**

- 4.1 Required documentation procedures and processes are confirmed
- 4.2 Documentation is filled in legibly and proofread

4.3 Documentation is processed in accordance with workplace requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIW2012A Grind rails.

## **Links**

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIW2012 Grind rails

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- applying grinding techniques to achieve rail profile and surface condition to meet requirements of rail industry standards and procedures
- applying relevant safeworking system and workplace procedures
- grinding welds and weld repairs using appropriate grinding wheel speed and rate of metal removal
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying job requirements
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- operating grinding equipment safely
- reading and interpreting relevant technical data, drawings, instructions and manuals
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- selecting and using hand tools, power tools and equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- accepted rail industry standards for rail profile and surface condition
- documentation and record keeping requirements
- grinding methods and results
- hazards that may exist when grinding rail and welds, and ways of controlling the risks involved
- manufacturer instructions and workplace procedures for operating grinding equipment
- problems that may occur when grinding rail and welds, and action that can be taken to report or resolve these problems
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant safeworking systems and operational procedures
- workplace procedures for grinding rail and welds.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

## **TLIW2028 Identify the principles of ballast cleaning operations**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to identify the principles of ballast cleaning operations.

It includes determining components and work stations of ballast cleaning machines, identifying ballast cleaning functions, and identifying hazards and risks associated with ballast cleaning operations.

The unit provides an introduction to ballast cleaning and is not to be used for their operation, which must be covered by individual certification for the particular machine.

Operators of ballast cleaning machines must have undertaken training and hold the relevant licence, permit or certificate and be recognised as competent for each type of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

W – Equipment and Systems Operations

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Determine components and work stations of ballast cleaning machines**

1.1 Ballast cleaning machine components and individual work stations are identified

1.2 Purpose of identified components and individual work stations is explained

1.3 Associated hazards of each component and appropriate control methods are identified

### **2 Identify ballast cleaning functions**

2.1 Purposes of ballast cleaning are identified

2.2 Method is identified by which the machine completes ballast cleaning operations in accordance with network owner's standards

### **3 Identify hazards and risks associated with ballast cleaning operations**

3.1 Environmental hazards are identified

3.2 Potential risks to the rail infrastructure are identified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW2028A Identify the principles of ballast cleaning operations.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIW2028 Identify the principles of ballast cleaning operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- anticipating appropriate numeric functions for using a ballast cleaner
- anticipating problems, faults and malfunctions that may occur, in accordance with organisational procedures
- applying relevant workplace procedures
- identifying job hazards and required action to minimise, control or eliminate identified hazards
- working systematically with required attention to detail without injury to self or others, or damage to equipment in accordance with organisational procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- ballast profile rail industry standards
- functions of ballast
- hazards that may exist when cleaning ballast and ways of controlling the risks involved
- problems that may occur when cleaning ballast and action that can be taken to resolve and report them
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace procedures for using a ballast cleaning machine.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Determine components and work stations of ballast regulators**

1.1 Ballast regulator components and individual work stations are identified

1.2 Purpose of the identified components and individual work stations is explained

1.3 Associated hazards of each component and appropriate control methods for each are identified

### **2 Identify ballast regulator functions**

2.1 Purposes of the regulator are identified

2.2 Methods by which the regulator profiles the ballast to meet network owner's rail industry standards are identified

### **3 Identify hazards and risks associated with ballast regulator operations**

3.1 Environmental hazards are identified

3.2 Potential risks to the rail infrastructure are identified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW2029A Identify the principles of ballast regulator operations.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIW2029 Identify the principles of ballast regulator operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- anticipating problems, faults and malfunctions, in accordance with regulatory requirements and workplace procedures
- applying relevant workplace procedures
- identifying job hazards and required action to minimise, control or eliminate identified hazards
- working systematically with required attention to detail without injury to self or others, or damage to equipment in accordance with organisational procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- ballast profile rail industry standards
- functions of ballast
- hazards that may exist when using a ballast regulator and ways of controlling the risks involved
- problems that may occur when using a ballast regulator and action that can be taken to resolve and report these problems
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace procedures for carrying out track ballasting using a ballast regulator.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIW2030 Identify the principles of dynamic track stabiliser operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to identify the principles of dynamic track stabiliser operations.

It includes determining components and work station of dynamic track stabilisers, identifying dynamic track stabiliser functions, and identifying hazards and risks associated with dynamic track stabiliser operations.

The unit provides an introduction to dynamic track stabilisers and is not to be used for their operation, which must be covered by individual certification for the particular machine.

### Components may include:

- chart recorders
- clamps
- lifting and lining systems
- ploughs
- stabiliser unit
- trolleys.

### Work stations may include:

- data input
- drive station
- external work station
- main operator station.

Operators of dynamic track stabilisers must have undertaken training and hold the relevant licence, permit or certificate and be recognised as competent for each type of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

W – Equipment and Systems Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Determine components and work stations of dynamic track stabilisers**

- 1.1 Dynamic track stabiliser components and individual work stations are identified
- 1.2 Purpose of the identified components and individual work stations is explained
- 1.3 Associated hazards of each component and appropriate control methods for each are identified

### **2 Identify dynamic track stabiliser functions**

- 2.1 Purposes of the dynamic track stabiliser are identified
- 2.2 Methods by which the dynamic track stabiliser consolidates the ballast to meet network owner's rail industry standards are identified

### **3 Identify hazards and risks associated with dynamic track stabiliser operations**

- 3.1 Environmental hazards are identified
- 3.2 Potential risks to the rail infrastructure are identified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

# TLIW2031 Identify the principles of self-propelled rail grinder operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to identify the principles of self-propelled rail grinder operations.

It includes determining components and work stations of self-propelled rail grinders, identifying self-propelled rail grinder functions, and identifying hazards and risks associated with self-propelled rail grinder operations.

The unit provides an introduction to self-propelled rail grinders and is not to be used for their operation, which must be covered by individual certification for the particular machine.

### Components may include:

- computer systems
- firefighting equipment
- global positioning systems (GPSs)
- grinding stones
- grinding units
- lasers
- recorders
- trolleys
- waste extraction systems.

### Work stations may include:

- data input
- drive station
- external work station
- main operator station.

Operators of self-propelled rail grinders must have undertaken training and hold the relevant licence, permit or certificate and be recognised as competent for each type of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

# TLIW2032 Identify the principles of tamping machine operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to identify the principles of tamping machine operations for plain track and turnouts.

It includes determining components and work stations of tamping machines, identifying tamping machine functions, and identifying hazards and risks associated with tamping machine operations.

The unit provides an introduction to tamping machines and is not to be used for their operation, which must be covered by individual certification for the particular machine.

### Components may include:

- clamps
- lasers
- lifting and lining systems
- lifting units, including third arm
- ploughs
- rail sweeps
- satellites
- tamping tools and work heads
- trolleys.

### Work stations may include:

- data input
- drive station
- external work station and ground person
- front tower
- laser operation station
- main operator station.

Operators of tamping machines must have undertaken training and hold the relevant licence, permit or certificate and be recognised as competent for each type of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

W – Equipment and Systems Operations

## Unit Sector

# TLIW2033 Identify the principles of mechanised track laying operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to identify the principles of mechanised track laying operations.

It includes identifying components and work stations of mechanised track laying machines, identifying mechanised track laying functions, and identifying hazards and risks associated with mechanised track laying operations.

The unit provides an introduction to mechanised track laying machines and is not to be used for their operation, which must be covered by individual certification for the particular machine or individual work stations.

### Components may include:

- ballast conveyor
- control panels
- cutter bar and chain
- front liner
- gantry crane
- laying frame
  - new sleeper laying base
- old sleeper pick-up
- plough
- rail clamps
- rail feeders
- rear liner
- sleeper table
- steering.

### Work stations may include:

- chain operator station
- deflection operator station
- drive station
- gantry crane operator station
  - jewellery wagon

- main operator station
- pad layer station
- rail feeder station.

Operators of mechanised track laying machines must have undertaken training and hold the relevant licence, permit or certificate and be recognised as competent for each type of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

W – Equipment and Systems Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Identify components and work stations of mechanised track laying machines**

- 1.1 Mechanised track laying machine components and individual work stations are identified
- 1.2 Purpose of identified components and work stations is explained
- 1.3 Associated hazards of each component and work station and appropriate control methods are identified

### **2 Identify mechanised track laying functions**

- 2.1 Purposes of mechanised track laying are identified
- 2.2 Methods by which the mechanised track laying machine constructs or refurbishes track to meet

network owner's rail industry standards, are identified

### **3 Identify hazards and risks associated with mechanised track laying operations**

3.1 Environmental hazards are identified

3.2 Potential risks to the rail infrastructure are identified

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## TLIW2037 Clip and secure points

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to clip and unclip points in accordance with safeworking and workplace requirements.

It includes applying network owner procedures and protocols for clipping points within the rail network to protect a worksite or to confirm a route prior to moving a rail vehicle over points. It also includes unclipping points after activities are completed.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

W – Equipment and Systems Operations

### Unit Sector

Not applicable.

### Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Clip and secure points

1.1 Location and identification of points to be clipped and secured is confirmed

- 1.2 Normal or reversed position for points to be clipped in is confirmed
  - 1.3 Equipment to be used to clip points is checked for availability and suitability for the task
  - 1.4 Points are placed in correct position as required, in accordance with network owner procedures
  - 1.5 Points clips are fitted in correct position and locked and/or tagged as required, in accordance with network owner procedures
  - 1.6 Relevant personnel are notified points are clipped and secured, as required
- 2 Remove points clip**
- 2.1 Advice is confirmed as to location and identification of points to be unclipped
  - 2.2 Relevant personnel are contacted and informed as required, in accordance with network owner procedures
  - 2.3 Equipment is removed from track, secured and stowed appropriately
  - 2.4 Points are restored to correct position as required, in accordance with network owners procedures
  - 2.5 Relevant personnel are notified as required that clip and where used, lock/tag has been removed

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW2037B Clip and secure points.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIW2037 Clip and secure points

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with individuals and/or groups
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying position of points and adjusting them in accordance with workplace requirements
- placing points clip in accordance with workplace procedures
- reading and interpreting relevant organisational and/or network owner procedures for placing and removing points, clips and safety devices
- removing points clip in accordance with workplace procedures
- restoring points to correct position in accordance with workplace procedures
- working within timeframes typically expected for the work function and industrial environment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- organisational and/or network owner procedures for placing and removing points clips and lock/tag
- relevant rail danger zones
- relevant sections of applicable state/territory legislated rail safety requirements, codes of practice and/or guidelines.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation with terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

# TLIW2038 Place and remove temporary speed restriction equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to place and remove temporary speed restriction (TSR) equipment in accordance with legislative and regulatory requirements.

This unit involves applying the network owner's policies, procedures and protocols when placing and removing TSR equipment in the rail corridor.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Activities are performed using established safeworking procedures, with duty of care accountability and responsibility for self and others in achieving the prescribed outcomes within the limits of own responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

W – Equipment and Systems Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Place temporary speed restriction equipment**

- 1.1 Location, type and required speed of restriction to be placed is confirmed
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Relevant Network Control Officer is contacted and informed, in accordance with network owner's policies and procedures
- 1.4 Equipment is checked for availability and suitability to perform job in accordance with network owner's policies and procedures
- 1.5 TSR equipment is placed in accordance with network owner's standards
- 1.6 Relevant personnel are notified that TSR equipment has been placed

### **2 Remove temporary speed restriction equipment**

- 2.1 Location, type and speed of restriction to be removed is confirmed
- 2.2 Hazards are identified, risks are assessed and control measures are implemented
- 2.3 Relevant Network Control Officer is contacted and informed as required, in accordance with network owner's policies and procedures
- 2.4 Equipment is removed from track, and secured and stowed appropriately
- 2.5 Relevant personnel are notified that TSR equipment has been removed

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW2038A Place and remove temporary speed restriction equipment.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIW2038 Place and remove temporary speed restriction equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking system and workplace procedures in a suitable rail corridor context
- communicating effectively with individuals and groups
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- reading and interpreting Rail Infrastructure Manager procedures for placing and removing temporary speed restriction (TSR) equipment
- using TSR equipment in accordance with required Rail Infrastructure Manager standards
- working within the available timeframes for the work function and in accordance with workplace safeworking procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Rail Infrastructure Manager workplace procedures for placing and removing TSR equipment
- relevant rail danger zones
- terminology as defined by the relevant Rail Infrastructure Manager safeworking system.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of

assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rail industry standards, rules and codes of practice.

## **TLIW2039 Place and remove permanent way stop boards**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to place and remove permanent way stop boards, in accordance with legislative and regulatory requirements.

This unit involves applying the network owner's policies, procedures and protocols when placing and removing track protection signage used to protect one or more worksites in the rail corridor.

Track protection signage may include:

- in-field protection
- permanent way stop boards
- track protection stop signs.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Activities are performed using established safeworking procedures, with duty of care accountability and responsibility for self and others in achieving the prescribed outcomes within the limits of own responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

W – Equipment and Systems Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Place track protection signage

- 1.1 Location advice for track protection signage is confirmed
- 1.2 Hazards are identified, risks are assessed and control measures are implemented
- 1.3 Relevant Network Control Officer is contacted and informed as required in accordance with network owner's policies and procedures
- 1.4 Equipment is checked for availability and suitability to perform job in accordance with network owner's policies and procedures
- 1.5 Equipment is placed in accordance with network owner's rail industry standards
- 1.6 Relevant personnel are notified that track protection signage has been placed

### 2 Remove track protection signage

- 2.1 Location advice for removal of track protection signage is confirmed
- 2.2 Hazards are identified, risks are assessed and control measures are implemented
- 2.3 Relevant Network Control Officer is contacted and informed, in accordance with network owner's policies and procedures
- 2.4 Equipment is removed from track, and secured and stowed appropriately
- 2.5 Relevant personnel are notified that track protection signage has been removed

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW2039A Place and remove permanent way stop boards.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIW2039 Place and remove permanent way stop boards

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking systems and workplace procedures
- communicating effectively with individuals and groups
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- reading and interpreting Rail Infrastructure Manager procedures for placing and removing track protection signage
- using track protection signage in accordance with required Rail Infrastructure Manager rail industry standards
- working within the available timeframes for the work function in accordance with workplace safeworking procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hazards that can exist when placing and removing track protection signage
- Rail Infrastructure Manager/network owner's procedures for placing and removing track protection signage
- relevant rail danger zones.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of

assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Performance is demonstrated in a suitable rail corridor context.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIW2041 Clip points and apply rail safety equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to clip points and to apply rail safety equipment in accordance with legislative and regulatory requirements.

This unit involves the application of network owner policies and procedures for clipping points and applying rail safety equipment within the rail network.

All activities are performed under established procedures, with accountability and responsibility for self and others in achieving the prescribed outcomes within the limits of rail safety worker duty of care responsibilities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

W – Equipment and Systems Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Clip and secure points**
  - 1.1 Advice is confirmed as to the location and identification of points to be clipped and secured
  - 1.2 Position that points are to be clipped in is confirmed
  - 1.3 Relevant yard personnel are contacted and informed as required, in accordance with network owner policies and procedures
  - 1.4 Equipment is checked for availability and suitability to perform job in accordance with network owner policies and procedures
  - 1.5 Points are placed in correct position as required, accordance with network owner policies and procedures
  - 1.6 Points clips are fitted in correct position and locked as required, in accordance with network owner policies and procedures
  - 1.7 Relevant yard personnel are notified that points are clipped and secured
- 2 Remove points clip**
  - 2.1 Advice is confirmed as to location and identification of points to be unclipped
  - 2.2 Relevant yard personnel are contacted and informed as required, in accordance with network owner policies and procedures
  - 2.3 Equipment is removed from track, secured and stowed appropriately
  - 2.4 Points are restored to correct position as required, in accordance with network owner policies and procedures
  - 2.5 Relevant yard personnel are notified that clip and where used, lock has been removed
- 3 Apply safety devices**
  - 3.1 Advice is confirmed as to location and identification of safety device/s to be applied
  - 3.2 Position safety device/s are to be placed in is confirmed
  - 3.3 Equipment is checked for integrity in accordance with network owner policies and procedures
  - 3.4 Safety device/s are placed in correct position and locked as required, in accordance with network owner policies and procedures

- 3.5 Relevant yard personnel are notified that safety device/s are applied and secured
- 4 Remove safety devices**
- 4.1 Advice is confirmed as to location and identification of safety device/s to be removed
- 4.2 Safety device/s are removed from track, secured and stowed appropriately
- 4.3 Relevant yard personnel are notified that safety device/s and where used, lock, has been removed

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW2041A Clip points and apply rail safety equipment.

# Assessment Requirements for TLIW2041 Clip points and apply rail safety equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- clipping and unclipping points correctly
- communicating effectively with individuals and/or groups
- determining location of points to be clipped in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- measuring distances accurately
- reading and interpreting organisational and/or network owner procedures for placing and removing points, clips and safety devices.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- organisational and/or network owner policies and procedures for placing and removing points, clips and safety devices
- relevant rail danger zones
- relevant sections of applicable state/territory legislative and regulatory rail safety requirements, codes of practice and/or guidelines
- relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and work practices.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include

requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment, gloves and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## TLIW3013 Grind switches and crossings

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to grind switches and crossings in accordance with rail industry standards, safeworking and regulatory requirements, and workplace procedures.

It includes determining job requirements, grinding weld and/or weld repair, grinding switches and crossings to repair surface defects, and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when grinding switches and crossings, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

W – Equipment and Systems Operations

### Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Determine job requirements**

- 1.1 Weld repairs are located
- 1.2 Defects relating to rail surface profile and condition in switches and crossings are identified
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Appropriate equipment is selected
- 1.5 Appropriate repair method and/or profile is selected to ensure completed work will meet specifications
- 1.6 Site is cleared of obstructions and combustible material

### **2 Grind weld repair**

- 2.1 Switch or crossing is ground to nominated profile after installation or welded repair using approved equipment in accordance with workplace procedures
- 2.2 Grinding equipment is operated safely in accordance with work health and safety (WHS)/occupational health and safety (OHS) and environmental requirements
- 2.3 Switch or crossing profile and alignment are measured to ensure compliance with acceptance standards
- 2.4 Rail surface condition is assessed for compliance with acceptance standards

### **3 Grind switch or crossing to repair surface defects**

- 3.1 Switch or crossing is ground using approved equipment in accordance with workplace procedures
- 3.2 Grinding equipment is operated safely in accordance with WHS/OHS and environmental requirements
- 3.3 Finished surface is checked to ensure compliance with acceptance standards

### **4 Complete documentation**

- 4.1 Required documentation procedures and processes are confirmed
- 4.2 Documentation is filled in legibly and proofread
- 4.3 Documentation is processed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW3013A Grind switches and crossings.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIW3013 Grind switches and crossings

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least five** separate occasions and include:

- applying grinding techniques to achieve switch and crossing profile and surface condition to meet required rail industry standards and workplace procedures
- applying relevant safeworking system and workplace procedures
- grinding weld repairs using appropriate grinding wheel speed and rate of metal removal in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- operating grinding equipment safely
- reading and interpreting relevant technical data, drawings, instructions and manuals
- reporting and/or rectifying identified problems, in accordance with workplace procedures
- selecting and using hand tools, power tools and equipment in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- grinding methods and results
- hazards that may exist when grinding switches and crossings, and ways of controlling the risks involved
- problems that may occur when grinding switches and crossings, and action that can be taken to report or resolve these problems
- relevant rail industry standards for switch or crossing profile and surface condition
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace procedures for grinding switches and crossings.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

# TLIW3015 Weld rail using aluminothermic welding process

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to weld rail using the aluminothermic welding process in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes preparing and planning the welding method, preparing the rail for aluminothermic welding, carrying out the welding process, checking weld conformance and completing required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when welding rail using the aluminothermic welding technique, as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

W – Equipment and Systems Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Prepare and plan welding method**

- 1.1 Work requirements are determined to identify scope of work and resources required
- 1.2 Welding equipment and consumables are prepared and checked for serviceability
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Site is cleared of obstructions and combustible material to minimise risk of accidents and fire
- 1.5 Firefighting and other safety equipment is organised, checked and located in accordance with required regulations
- 1.6 Personnel are briefed about safety precautions specific to aluminothermic welding as required to minimise risk of injury

### **2 Prepare rail for welding**

- 2.1 Location of weld is identified and assessed in accordance with standards and procedures
- 2.2 Track is prepared for welding in accordance with workplace standards and procedures
- 2.3 Rail is prepared for welding in accordance with workplace standards and procedures

### **3 Carry out welding process**

- 3.1 Moulds are fitted and luted to standard to prevent leakage of the molten reaction
- 3.2 Rails are pre-heated to standard to prevent heat loss
- 3.3 Rails are welded using aluminothermic method in accordance with approved procedures
- 3.4 Welding equipment is removed according to approved procedures

- 3.5 Excess material is removed from weld in accordance with workplace procedures
- 3.6 Rail profile is restored to standard using rail profile grinder in accordance with workplace procedures
- 3.7 Arrangements are made for track to be restored
- 4 Check weld conformance**
  - 4.1 Finish ground weld area is visually inspected for surface finish and defects
  - 4.2 Finish ground weld area is checked for conformance to rail profile and geometry acceptance standards
- 5 Complete documentation**
  - 5.1 Required documentation and/or record keeping procedures and processes are confirmed
  - 5.2 Documentation and/or records are filled in legibly and proofread
  - 5.3 Documentation and/or records are processed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW3015A Weld rail using aluminothermic welding process.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIW3015 Weld rail using aluminothermic welding process

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least ten** separate occasions and include:

- applying relevant safeworking system and workplace procedures
- carrying out required welding operations
- checking compliance of work with job specifications
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing fire control workplace procedures
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with manufacturer specifications and operating procedures
- performing pre-operational and post-operational equipment checks in accordance with manufacturer specifications
- planning and preparing for welding method
- preparing rail for welding in accordance with workplace procedures
- reading and interpreting relevant technical data, drawings, instructions and manuals
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- selecting and using required personal protective equipment (PPE)
- using appropriate type or types of welding processes
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of plant and equipment, hardware and components used in welding activities
- contents of relevant workplace technical manuals and instructions
- hazards that may exist when welding rail and ways of controlling the risks involved
- impact of other work activities on welding integrity
- materials identification, handling and storage safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions
- problems that may occur when welding rail using the aluminothermic technique, and action that can be taken to report or resolve these problems
- relevant rail industry standards
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- site inspection techniques
- workplace documentation and/or record keeping requirements
- workplace procedures for welding rail using the aluminothermic technique.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment of **ten (10) successful rail welds** using the aluminothermic method in an appropriate range of situations in the rail corridor workplace is required.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice, SDSs/MSDSs and operation manuals.

# TLIW3016 Weld rail using flashbutt welding process

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to weld rail using the flashbutt welding process in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes performing pre-operational and post-operational equipment checks, preparing rail for welding, carrying out flashbutt welding, checking weld conformance and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when welding rail using the flashbutt welding process, as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

# Assessment Requirements for TLIW3016 Weld rail using flashbutt welding process

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least 25** separate occasions and include:

- applying relevant safeworking and workplace procedures
- carrying out required welding operations
- checking compliance of work with job specifications
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- implementing required fire control workplace procedures
- interpreting and following operational instructions and following scheduled work process
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating flashbutt welding equipment in accordance with workplace procedures
- planning scheduled work including predicting consequences and identifying improvements
- reading and interpreting relevant instructions, procedures, route information and signs
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- selecting and using required personal protective equipment
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of relevant plant and equipment, transport, structures, hardware and components used in work activities
- emergency management plan
- hazardous situations and related personal protection measures
- hazards that may exist when welding rail using the flashbutt welding process, and ways of controlling the risks involved
- materials identification, handling and storage safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions
- problems that may occur when using the flashbutt welding process and equipment, and action that can be taken to report or resolve these problems
- rail welding industry standards
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- technical knowledge relevant to flashbutt welding
- workplace procedures for operating flashbutt welding equipment
- workplace procedures for welding rail using the flashbutt welding process.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment of **twenty five (25) successful flashbutt welds** in an appropriate range of situations in the rail corridor workplace is required.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, SDSs/MSDSs, codes of practice and operation manuals.

# TLIW3026 Operate stand alone signalling/point control equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to operate stand alone signalling/point control equipment on a rail network in accordance with Rail Infrastructure Manager requirements.

It includes using and restoring stand alone signalling/point control equipment.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety but does not include the implementation of worksite protection.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

W – Equipment and Systems Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Use stand alone signalling control equipment**

- 1.1 Signalling/point control equipment is identified and confirmed with network control officer, as required
- 1.2 Authority to operate signalling/point control equipment is obtained from network control officer
- 1.3 Appropriate personal protective equipment (PPE) is worn in accordance with Rail Infrastructure Manager and organisational requirements
- 1.4 Track environment is accessed safely in accordance with workplace procedures
- 1.5 Changed local conditions are identified
- 1.6 Stand alone signalling/point control equipment is operated safely in accordance with local instructions
- 1.7 Route is set and confirmed as correct to facilitate safe rail vehicle movement
- 1.8 Communication with network control officer is maintained using appropriate communications protocols and systems in accordance with workplace procedures
- 1.9 Unsafe situations and/or emergencies are identified and appropriate action is taken in accordance with workplace procedures

### **2 Restore stand alone signalling control equipment**

- 2.1 Network Control Officer is informed when rail vehicle/s are clear of fouling points
- 2.2 Stand alone signalling/point control equipment is restored to correct position
- 2.3 Restoration is confirmed with Network Control Officer
- 2.4 Signalling/point control equipment is locked and secured as required, in accordance with workplace procedures
- 2.5 Identified equipment faults are reported in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW3026B Operate stand alone signalling/points control equipment.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIW3026 Operate stand alone signalling/point control equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- communicating effectively with individuals and work groups
- following workplace policies, procedures and protocols
- identifying unsafe situations and emergencies
- operating stand alone signalling/point control equipment in accordance with workplace procedures
- restoring stand alone signalling/point control equipment in accordance with workplace procedures
- using appropriate personal protective equipment (PPE) conforming to Rail Infrastructure Manager requirements.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- operational communications protocols and systems
- Rail Infrastructure Manager policies, procedures and protocols for identified unsafe situations or emergencies within duty of care workplace role
- Rail Infrastructure Manager rules and workplace procedures
- rail terminology as defined by the applicable Rail Infrastructure Manager
- recognition of points, signals and location features
- relevant rail danger zones.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation with terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rail industry standards, rules and codes of practice.

## Links

Companion Volume implementation guides are found in VETNet -

# TLIW3027 Operate minor track equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to operate minor track equipment as part of workplace activities across a variety of rail operational contexts.

It includes performing pre-operational equipment checks; obtaining approval to place on track; preparing, operating and monitoring minor equipment on track; removing equipment from track; performing post operation equipment procedures; and completing documentation.

The unit covers equipment that can be manually lifted on or off track, including equipment that can be moved and operated on trolleys. Minor track equipment may include:

- ballast scarifiers
- dog pullers
- dog screw setters/drivers
- joint lifters
- multi-spindle borers
- power track jacks
- rail-mounted compressor
- small sleeper spacers
- spike drivers
- various fastening applicators.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Operators of minor track equipment must have undertaken training and, where appropriate, hold the relevant licence, permit and/or certification and be recognised as competent for the requirements for the type of equipment being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

W – Equipment and Systems Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Perform pre-operational equipment checks**

- 1.1 Detailed pre-operational equipment checks are conducted in accordance with manufacturer specifications and organisational procedures
- 1.2 Logbooks are checked and completed in accordance with organisational requirements and manufacturer specifications
- 1.3 Problems with equipment are identified and rectified in accordance with workplace procedures
- 1.4 Identified problems are reported and documented in accordance with organisational procedures

### **2 Obtain approval to place on track**

- 2.1 Protection officer is identified
- 2.2 Protection officer or person in charge of work (PICOW) is contacted to obtain approval to place minor equipment on track, and to move to designated track at nominated location in accordance with organisational procedures

### **3 Prepare, operate and monitor minor equipment on track**

- 3.1 Equipment is travelled to worksite or nominated signal/yard location
- 3.2 Equipment is prepared for work
- 3.3 Equipment is operated in a safe and efficient manner in accordance with relevant codes of practice, safeworking

systems, and manufacturer and organisational procedures

3.4 Equipment is operated in accordance with organisational standards and specifications

3.5 Warning systems are monitored and responded to appropriately during operation

#### **4 Remove equipment from track**

4.1 Approval is requested from the protection officer or PICOW to direct when and where to off track equipment

4.2 Equipment is propelled to nominated off-track location

4.3 Protection officer or PICOW is contacted and informed that all equipment is off-tracked

4.4 Equipment is left stored in appropriate manner and location to ensure its security and protection

#### **5 Perform post-operational equipment procedures**

5.1 Post-operational equipment checks are conducted to identify defects and maintenance requirements in accordance with manufacturer specifications and organisational procedures

5.2 Identified problems are reported in accordance with organisational procedures

5.3 Post-operating service schedule is performed in accordance with organisational procedures

#### **6 Complete documentation**

6.1 Logbooks are checked and completed accurately

6.2 Documentation is completed accurately in accordance with organisational procedures

6.3 Documentation is processed in accordance with organisational procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW3027A Operate minor track equipment.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIW3027 Operate minor track equipment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking system and workplace procedures
- communicating effectively with others
- completing relevant documentation
- following operational instructions
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- obtaining approval to place on track; preparing
- operating and monitoring minor equipment on track
- performing post operation equipment procedures
- performing pre-operational equipment checks
- removing equipment from track
- reporting and rectifying identified problems, faults and malfunctions, in accordance with workplace procedures
- working with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hazards that may exist when operating minor track equipment and ways of controlling the risks involved
- organisational emergency management plan procedures for operating minor track equipment
- organisational procedures and manufacturer specifications for operating minor track equipment
- problems that can occur on minor track equipment and related action that should be taken
- problems that may occur when operating minor track equipment and action that can be taken to report or resolve these problems
- relevant state/territory rail safety requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- work on-track safeworking system rules and regulations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

## **TLIW3034 Apply protective coating systems to structures**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to apply protective coating systems to structures using manual or mechanical methods in accordance with organisational requirements.

It includes planning, preparing the surface, applying surface coatings and completing required documentation.

People achieving competence in this unit will need to fulfil any legislated work health and safety (WHS)/occupational health and safety (OHS) requirements and applicable state/territory rail safety requirements, and to comply with relevant codes of practice and/or guidelines.

Work involves applying routine operational principles and procedures when applying protective coating systems to structures, as part of workplace activities across a variety of contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

W – Equipment and Systems Operations

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Plan surface coating process

- 1.1 Equipment, accessories and consumables are assembled and checked for applicability to the surface coating tasks
- 1.2 Safety data sheets (SDSs)/material safety data sheets (MSDSs), product application and safety information are read and used to inform work practices
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Particular process techniques, time and safety requirements are noted and used to inform work planning

### 2 Undertake surface preparation

- 2.1 Characteristics of uncoated surfaces and problems to be rectified are identified
- 2.2 Appropriate surface preparation is carried out in accordance with identified problems and organisational standards
- 2.3 Surface preparation is checked for compliance with required organisational standards

### 3 Apply surface coating

- 3.1 Required surface coating materials and methods to be used are identified and appropriate tools, equipment and materials are selected
- 3.2 Sequence of work is identified, maximising potential of the applied finish
- 3.3 Equipment and accessories are used in line with manufacturer and organisational specifications
- 3.4 Surface coating depth and coverage are checked for compliance with specifications
- 3.5 Surfaces are kept free of contamination
- 3.6 Faults and problems are identified and action is taken to rectify them in accordance with manufacturer specifications and organisational procedures

### 4 Complete workplace operations

- 4.1 Tools and equipment are cleaned prior to storage
- 4.2 Tools, equipment and unused materials are relocated to storage or next operational location as required

- 4.3 Waste materials are disposed of correctly following organisational and environmental policies and procedures
- 4.4 Documentation and records are completed in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW3034A Apply protective coating systems to structures.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIW3034 Apply protective coating systems to structures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- applying a protective coating to component using manual or mechanical methods in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and workplace procedures
- applying relevant safeworking system and workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying problems and faults
- identifying required resources
- interpreting and following operational instructions and prioritising work
- maintaining and checking equipment to manufacturer specifications and workplace procedures
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- planning own work, including predicting consequences and identifying improvements
- reading and interpreting relevant instructions, procedures, information and labels
- reporting and rectifying problems, faults and malfunctions within limits of own role, in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hazards that may occur when applying surface coatings, and ways of controlling the risks involved
- housekeeping standards and procedures
- methods for preventing contamination of surfaces during and after surface coating
- organisational procedures and policies for applying surface coatings to structures
- problems that may occur when applying surface coatings and action that can be taken to resolve these problems
- relevant rail danger zones
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- SDSs/MSDSs, manufacturer instructions and workplace procedures
- workplace procedures relating to applying surface coatings.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, SDSs/MSDSs, rail industry standards, codes of practice and operation manuals.

# **TLIW3035 Heat and cut materials using oxy-LPG equipment for the rail industry**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to heat and cut materials for the rail industry using oxy-LPG equipment.

It includes planning and preparing for work, setting up and testing the equipment, heating and cutting materials, shutting down equipment and completing clean-up activities.

People achieving competence in this unit will need to fulfil applicable state/territory legislated work health and safety (WHS)/occupational health and safety (OHS) requirements and rail safety requirements, and to comply with relevant codes of practice and/or guidelines.

Work involves heating and cutting steel and includes cutting up waste for salvage; cutting steel, rails and bolts; and cutting holes in plate (with the exception of structural steel members). Heating activities include steel and bolts (excluding structural steel members).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

W – Equipment and Systems Operations

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Plan and prepare for work**

- 1.1 Work instructions, including plans, specifications, quality requirements and operational details are obtained, confirmed and applied to the scope of work to be performed
- 1.2 Safety and WHS/OHS requirements are followed in accordance with safety plans and organisational policies
- 1.3 Signage and barricade requirements are identified and implemented as required
- 1.4 Plant, tools and equipment consistent with the requirements of the job are selected, checked for serviceability, and faults are rectified or reported prior to commencement
- 1.5 Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use
- 1.6 Environmental requirements are identified and work is carried out in accordance with environmental plans, and statutory and legislative authority obligations

### **2 Set up and test equipment**

- 2.1 Appropriate type of fire extinguisher is selected and located to be readily accessible prior to and during operations
- 2.2 Regulators are attached to oxy-LPG bottles in accordance with manufacturer specifications and WHS/OHS regulations
- 2.3 Lines are purged to manufacturer recommendations prior to lighting up
- 2.4 Equipment is tested for leaks and corrective action is undertaken or faults are reported
- 2.5 Correct pressures and cutting tips are selected in accordance with material to be heated or cut and manufacturer specifications

### **3 Heat and cut material**

- 3.1 Material is accurately marked and secured or clamped ready for cutting
- 3.2 Torch is lit correctly and safely in accordance with manufacturer specifications
- 3.3 Setting of flame is adjusted for cutting in accordance with manufacturer recommendations

3.4 Heat is applied to specified material and weakening effects of the heating process are minimised

3.5 Correct cutting position is adopted during cutting to set out mark

3.6 Material is correctly cooled

#### **4 Shut down equipment and clean up**

4.1 Torch is switched off in accordance with manufacturer specifications

4.2 Gas supply is shut off in accordance with manufacturer specifications

4.3 Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification

4.4 Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and organisational policies and procedures

#### **5 Complete documentation**

5.1 Required documentation procedures and processes are confirmed

5.2 Documentation is filled in legibly and proofread

5.3 Documentation is processed in accordance with workplace procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW3035A Heat and cut materials using oxy-LPG equipment for the rail industry.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIW3035 Heat and cut materials using oxy-LPG equipment for the rail industry

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- applying relevant safeworking system and workplace procedures
- complying with organisational policies and procedures, including quality requirements
- complying with site safety plan and work health and safety (WHS)/occupational health and safety (OHS) legislation, regulations and codes of practice applicable to workplace operations
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying, selecting and effectively using relevant materials and equipment in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and workplace procedures
- interpreting and following operational instructions and prioritise work
- locating, interpreting and applying relevant information, standards and specifications
- maintaining equipment to manufacturer specifications
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- planning own work, including predicting consequences and identifying improvements
- reading and interpreting relevant instructions, procedures, information and documentation
- reporting and rectifying problems, faults and malfunctions that may occur, in accordance with workplace procedures
- using oxy-LPG equipment to heat and cut materials to manufacturer specification and workplace procedures
- using tools, plant and equipment safely and effectively
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics from SDSs/MSDSs and workplace procedures
- correct storage of materials and environmentally friendly waste management
- hazards that may occur and ways of controlling the risks involved
- job safety analysis (JSA) and safe work method statements
- LPG heating and cutting equipment types, characteristics, uses and limitations
- oxy-LPG heating and cutting equipment set-up and operating techniques
- problems that may occur and action that can be taken to resolve these problems
- rail stresses
- regulations relating to heating and cutting materials for the rail industry using oxy-LPG equipment
- relevant rail danger zones
- relevant WHS/OHS and environmental protection procedures and guidelines.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, SDSs/MSDSs, codes of practice and operation manuals.

# TLIW3042 Grind rail on tram/light rail systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to grind rail welds and faults on tram or light rail systems in accordance with approved standards, safeworking and regulatory requirements, and organisational procedures.

It includes determining job requirements, grinding weld and/or weld repair, grinding rail to repair surface defects and completing required documentation.

This competency relates to grinding new welds and welded repairs on the rail and check rail, grinding out corrugations and re-profiling the rail.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

W – Equipment and Systems Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Determine job requirements**
  - 1.1 New welds and weld repairs are located
  - 1.2 Corrugations on the rail are identified
  - 1.3 Hazards are identified, risks are assessed and control measures are implemented
  - 1.4 Appropriate equipment is selected
  - 1.5 Appropriate repair method and/or profile is selected to ensure completed work will meet specifications
  - 1.6 Site is cleared of obstructions and combustible material
- 2 Grind weld repair**
  - 2.1 Rail and check rail are ground to profile using approved equipment in accordance with workplace procedures
  - 2.2 Grinding equipment is operated safely in accordance with work health and safety (WHS)/occupational health and safety (OHS) and environmental requirements
  - 2.3 Rail profile and vertical and horizontal alignment are measured to ensure compliance with acceptance standards
  - 2.4 Rail surface condition is assessed for compliance with rail industry standards
- 3 Grind rail to repair corrugations**
  - 3.1 Rail is ground using approved equipment in accordance with workplace procedures
  - 3.2 Grinding equipment is operated safely in accordance with WHS/OHS and environmental requirements
  - 3.3 Finished surface is checked to ensure compliance with specifications
- 4 Re-profile rail**
  - 4.1 Rail is re-profiled using approved equipment in accordance with workplace procedures
  - 4.2 Equipment is operated safely in accordance with WHS/OHS and environmental requirements
  - 4.3 Finished surface is checked to ensure ground profile complies with organisational requirements and specifications
- 5 Complete documentation**
  - 5.1 Required documentation procedures and processes are confirmed
  - 5.2 Documentation is filled in legibly and proofread

5.3 Documentation is processed in accordance with workplace procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIW3042A Grind rail on tram/light rail systems.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIW3042 Grind rail on tram/light rail systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least five** separate occasions and include:

- applying relevant safeworking system and workplace procedures
- grinding rail on tram or light rail system in accordance with workplace specifications and procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant technical data, drawings, instructions and manuals
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- selecting and using hand tools, power tools and equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation and record keeping requirements
- grinding methods and results
- hazards that may exist when grinding rail and welds, and ways of controlling the risks

involved

- problems that may occur when grinding rail and welds, and action that can be taken to report or resolve these problems
- rail industry standards for rail profile and surface condition
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace procedures for grinding rail and welds.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in *the Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate tram or light rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

# TLIW3043 Weld rail on tram/light rail systems using electric welding process

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to weld rail, crossings or switches on tram or light rail systems using an electric welding process, in accordance with rail industry standards, safeworking and regulatory requirements, and organisational procedures.

It includes preparing rails, crossings or switches for welding; gouging or grinding; setting up welding equipment; performing the welding operation; checking weld conformance; and completing required documentation.

This unit covers the processes used to repair rail surface defects and restore rail profile to plain rail, crossings and switches.

Welding equipment may include:

- electric welders
- electrode holder
- generators
- robotic welder
- wirefeed welding unit.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

W – Equipment and Systems Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Prepare rails, crossings or switches for welding

- 1.1 Weld repair area is identified and assessed in accordance with standards and procedures
- 1.2 Welding equipment and consumables are prepared and checked for serviceability
- 1.3 Hazards are identified, risks are assessed and control measures are implemented
- 1.4 Weld repair area is prepared for welding in accordance with workplace standards and procedures
- 1.5 Track components are assembled/aligned to specification as required

### 2 Assemble and set up welding equipment

- 2.1 Welding equipment is set up and adjusted to meet welding process requirements
- 2.2 Accessories and consumables are selected for use

### 3 Assemble and set up gouging and grinding equipment

- 3.1 Gouging and grinding equipment is assembled and set up
- 3.2 Equipment settings are adjusted to meet process requirements
- 3.3 Accessories and consumables are selected for use

### 4 Remove defect

- 4.1 Appropriate method to be used to remove the defect is identified in accordance with organisational standards and procedures
- 4.2 Defect is removed using identified method in accordance with organisational standards and procedures

### 5 Perform welding operation

- 5.1 Weld metal is applied to repair area to meet specifications in accordance with standards and procedures

- 5.2 Welded area is cleaned in preparation for grinding
- 5.3 Welded area is ground in accordance with organisational standards and procedures
- 6 Check weld conformance**
  - 6.1 Finished ground weld area is visually inspected for surface finish and defects
  - 6.2 Finished ground weld area is checked for conformance to rail/crossing/switch profile rail industry standards
- 7 Complete post-operative checks and documentation**
  - 7.1 Equipment is checked for serviceability
  - 7.2 Defective equipment is replaced and/or reported for servicing/repair in accordance with organisational policies and procedures
  - 7.3 Documentation is completed and processed in accordance with organisational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW3043A Weld rail on tram/light rail systems using electric welding process.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIW3043 Weld rail on tram/light rail systems using electric welding process

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least five** separate occasions and include:

- applying relevant safeworking and workplace procedures
- ensuring weld conforms to organisational requirements
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- performing welding grinding, gouging and testing operations on rails, crossings or switches systems using electric welding processes in accordance with workplace procedures
- preparing items for welding according to workplace requirements
- reading and interpreting relevant technical data, drawings, instructions and manuals
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with organisational procedures
- selecting and using hand tools, power tools and equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation and record keeping requirements
- fundamentals of tram track and components
- hazards that may exist when welding rail using an electric welding process and ways of controlling the risks involved
- problems that may occur when welding rail using an electric welding process and action that can be taken to report or resolve these problems
- rail industry standards for weld repairs on rail
- relevant rail danger zones
- relevant safety data sheets (SDSs)/material safety data sheets (MSDSs) workplace procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- track standards for tram rail, crossing and switch condition and surface profile
- workplace procedures for removing defects by gouging, grinding and welding rail using an electric welding process.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate tram or light rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, SDSs/MSDSs, codes of practice and operation manuals.

# TLIW5001 Apply rail communications systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves applying rail communications systems, in accordance with workplace procedures and regulatory requirements.

It includes preparing to apply rail communications systems, recording and logging communications, and ensuring safeworking systems are incorporated into communications systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

W – Equipment and Systems Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Prepare to apply rail communications systems**

1.1 Communications systems used in the rail industry are outlined

- 1.2 Main components of fixed and mobile communications systems are identified and explained
- 1.3 Functions of the different types of communications systems used in the rail industry are explained
- 1.4 Effectiveness of different types of communications systems are compared
- 1.5 Communications system/s appropriate to a situation are selected in accordance with organisational policies and procedures
- 1.6 Hazards are identified, risks are assessed and control measures are implemented
- 1.7 Working order of selected communications system/s is ensured in accordance with organisational policies and procedures

## **2 Record and log communications**

- 2.1 Purpose of recording and logging communications is identified
- 2.2 Methods by which communications are recorded and logged are identified and explained
- 2.3 Effectiveness of different types of communications recording and logging processes are outlined
- 2.4 Communications recording and logging processes most appropriate to a situation are selected in accordance with organisational policies and procedure
- 2.5 Relevant communications systems plans are identified, explained and implemented in accordance with organisational policies and procedures

## **3 Ensure safeworking systems are incorporated into communications systems**

- 3.1 Different methods of safeworking are identified and communications used for each type are outlined
- 3.2 Potential problems that can occur with different communications systems are identified and explained
- 3.3 Methods to overcome identified problems are developed and implemented

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW5001A Apply rail communications systems.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIW5001 Apply rail communications systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and using rail industry standards and safety management systems (SMSs)
- applying relevant safeworking and workplace procedures
- communicating effectively with others and interpreting complex information related to rail operations
- ensuring safeworking systems are incorporated into communications systems
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- preparing to apply rail communications systems
- recording and logging communications
- researching relevant information
- reviewing regulatory information changes.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency management plan
- key concepts and definitions relating to rail communications systems
- key principles and practices associated with railway operations
- key rail industry regulatory requirements and standards
- rail industry terminology, including terminology used in rail industry standards and codes of practice
- rail regulatory framework
- rail SMSs
- relevance of national and international standards to the rail industry.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in rail workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

# TLIW5002 Manage rail assets and interfaces

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to manage rail assets and interfaces, in accordance with workplace procedures and regulatory requirements.

It includes managing rail infrastructure fixed assets and maintenance regimes; managing rail operation fixed assets and management regimes; applying reliability, availability, maintainability and safety of rail infrastructure; and managing wheel rail interface.

This unit involves knowledge of rail assets in general terms. It covers the different rail infrastructure and operational components and can be applied to freight, heavy haul or passenger rail systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

W – Equipment and Systems Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential      Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Manage rail infrastructure fixed assets and maintenance regimes**

- 1.1 Components and functions of track and track bed are identified and explained
- 1.2 Electrical infrastructure components and functions are identified and explained
- 1.3 Other fixed assets and their functions are identified and explained
- 1.4 Hazards are identified, risks are assessed and control measures are implemented
- 1.5 Organisational track inspection methodologies are identified, analysed and recommendations for improvement are made to management as required
- 1.6 Inspection and maintenance regimes for other assets are identified, analysed and recommendations for improvement are made to management as required

**2 Manage rail operation fixed assets and management regimes**

- 2.1 Rail operation assets and their individual life cycles are identified and explained
- 2.2 Asset maintenance plans are identified, accessed and implemented
- 2.3 Processes to monitor asset utilisation and their effectiveness in meeting operational needs are identified and followed
- 2.4 Potential conflict between operational asset utilisation and maintenance requirements are identified, explained and managed
- 2.5 Organisational technologies and processes that could enhance asset utilisation are identified, analysed and recommended to management
- 2.6 Inspection and maintenance regimes for other assets are identified and analysed

**3 Apply reliability, availability, maintainability and safety of rail infrastructure**

- 3.1 Concepts related to rail infrastructure reliability, availability, maintainability and safety (RAMS) are identified and explained
- 3.2 Risk assessment is undertaken in relation to rail infrastructure RAMS

- 3.3 Programs are developed and implemented to ensure rail infrastructure RAMS are applied
  - 3.4 Impacts of safety requirements on rail network are identified, explained and taken into consideration
- 4 Manage wheel rail interface**
- 4.1 Wheel rail interface is identified and explained
  - 4.2 Defects and problems related to wheel rail interface are anticipated and rectified, and preventative programs are developed and implemented
  - 4.3 Impacts of poor management of wheel rail interface are identified and explained
  - 4.4 Damage that can be caused by poor wheel rail interface is identified and explained
  - 4.5 Methods for measuring and maintaining rail profiles are identified and applied
  - 4.6 Methods for maintaining rolling stock wheels are identified and applied

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIW5002A Manage rail assets and interfaces.

# Assessment Requirements for TLIW5002 Manage rail assets and interfaces

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and using rail safety industry standards
- applying relevant safeworking and workplace procedures
- communicating effectively with others and interpreting complex information relating to rail operations
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- managing rail infrastructure fixed assets and maintenance regimes to ensure reliability, availability, maintainability and safety (RAMS) of rail infrastructure assets
- managing rail operation fixed assets and maintenance regimes to ensure RAMS of rail operations assets
- managing wheel rail data and interface.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- asset management policy and processes that address all phases of the asset life cycle of the rail infrastructure or operations
- duty holders and their duties under rail safety legislation
- key concepts and definitions relating to rail assets and interfaces
- key principles and practices associated with railway operations
- key rail industry regulatory requirements and standards
- rail industry and rail industry terminology, including terminology used in rail industry standards
- rail infrastructure reliability, availability, maintainability and safety (RAMS) concepts

- rail regulatory framework
- rail safety management systems (SMSs)
- relevance of standards to the rail industry
- relevant information to manage rail assets and interfaces.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in rail workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

# TLIW5003 Manage rail network control systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to manage rail network control systems, in accordance with workplace procedures and regulatory requirements.

It includes identifying network control and train control systems and their functions.

This unit involves rail network control systems and applications. It can be applied to networks supporting heavy haul, freight or passenger rail services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

W – Equipment and Systems Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Manage network control**      1.1 Purpose of network control systems and their functions

- systems and their components** are identified and explained
- 1.2 Different types of network control systems are identified and discussed
  - 1.3 Components of each type of network control system are identified and explained
  - 1.4 Principles and major components of interlocking systems are identified, explained and used as the foundation for decision making
  - 1.5 Safety implications associated with different types of signalling and interlocking systems are identified and used to guide decision making
- 2 Manage operation of train control systems**
- 2.1 Functions of train control systems are identified and explained
  - 2.2 Main components of a train control system and their purpose are identified and explained
  - 2.3 Interaction of train control systems with rail operations is identified, explained and used as the basis for decision making
  - 2.4 Hazards are identified, risks are assessed and control measures are implemented
  - 2.5 Possible impact train control systems can have on rail operations are identified, explained and taken into consideration in decision making

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

## **TLIW5004 Manage train planning**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to manage train planning, in accordance with workplace procedures and regulatory requirements.

It includes preparing to manage train planning, and developing and implementing strategies to optimise train planning.

This unit provides an awareness of rail train planning and strategies for optimising performance. It can be applied to freight, heavy haul or metropolitan and regional passenger rail systems.

In applying this unit, the following rail safety operating principles may be involved:

- ensuring emergencies and incidents are properly managed
- ensuring interfaces between different organisations are properly defined and managed
- identifying and managing risk
- protecting persons from injury
- protecting property from damage
- track access
- train separation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

W – Equipment and Systems Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Prepare to manage train planning

1.1 Goals of train planning are identified and explained

1.2 Principal factors involved in train planning are identified and outlined

1.3 Resources required for train planning are identified, explained and obtained

1.4 Methods by which train planning performance can be measured are identified and implemented

### 2 Develop and implement strategies to optimise train planning

2.1 Factors that contribute to optimal train planning are identified and explained

2.2 Strategies for ensuring optimal train planning is maintained are developed and implemented

2.3 Methods by which optimal train planning performance can be measured are developed and applied

2.4 Strategies are communicated to relevant personnel

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# TLIX4007 Implement and monitor integrated logistics support plans

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to implement and monitor integrated logistics support plans and associated subordinate plans in accordance with relevant organisational policy and procedures.

This unit was developed for integrated logistics support specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Identify requirements for providing integrated logistics support**

- 1.1 Sources of information relevant to integrated logistics support plans are identified and relevant information is obtained in accordance with organisational policy and procedures
- 1.2 Currency of information is reviewed and documented in accordance with organisational policy and procedures
- 1.3 Integrated logistics support plans are assessed against reviewed information

**2 Implement integrated logistics support plans**

- 2.1 Performance indicators and other criteria for measuring achievement are developed
- 2.2 Integrated logistics support risks and impacts relevant to plans are identified, reported and managed across the life cycle
- 2.3 Integrated logistics support plans are executed in accordance with organisational policy and procedures
- 2.4 Participation and contribution to integrated logistics support activities is established and maintained in accordance with agreed plans and schedule

**3 Monitor and report on integrated logistics support implementation**

- 3.1 Integrated logistics support plans are monitored and regularly reviewed in accordance with organisational policy and procedures
- 3.2 Plans are amended and documented in accordance with organisational policy and procedures
- 3.3 Performance measures are monitored to ensure they address all key aspects of organisational performance and meet stakeholder interests
- 3.4 Performance data is analysed on a regular and planned basis in terms of indicators and compliance with organisational policy and procedures
- 3.5 Strategic performance is reported to all stakeholders in a transparent manner in accordance with compliance requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX4007A Implement and monitor integrated logistics support plans.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIX4007 Implement and monitor integrated logistics support plans

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying integrated logistics support and project management knowledge
- applying integrated logistics support plan knowledge to assist in work and to guide problem solving
- applying relevant implementation processes
- consulting and negotiating with internal and external stakeholders, and resolving potential areas of conflict or concern to ensure overall objectives are achieved
- developing and/or complying with procedures
- displaying resilience by continuing to move forward despite criticism or setbacks
- ensuring mechanisms are in place to monitor integrated logistics support plans
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- undertaking performance measurement to enable objectives to be measured against defined parameters
- using materiel logistics program strategic objectives to identify long-term factors and external considerations for integrated logistics support planning.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- codification and cataloguing processes
- configuration management
- integrated logistics support processes related to planning
- international agreements
- interoperability
- level of written communication required to prepare correspondence and reports
- logistics support analysis principles and processes
- organisational policy and procedures impacting on integrated logistics support
- organisational role relevant to integrated logistics support
- performance measurement
- product knowledge related to systems and/or equipment in service in the organisation
- safety, legislative and statutory requirements, including environmental, sustainability issues
- supply chain concepts
- technical regulatory framework.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- computer and relevant software
- legislation, guidelines, procedures and protocols relating to integrated logistics support
- integrated logistics support plans and associated subordinate plans.

# TLIX4008 Conduct integrated logistics support activities

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to conduct integrated logistics support activities.

It includes the requirement to conduct a range of processes including capturing, recording, recovering and analysing data; maintaining associated workplace networks; and stakeholder requirements.

This unit was developed for integrated logistics support specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Prepare to conduct integrated logistics support activities**

- 1.1 Stakeholders are identified and consulted on materiel, and materiel systems needs and capabilities in accordance with organisational policy and procedures
- 1.2 Effective relationships are developed with stakeholders through consultation
- 1.3 Legislation and organisational policy and procedures that may impact on integrated logistics support activities are identified and analysed
- 1.4 Sources of information relevant to integrated logistics support activities are identified and relevant information is obtained in accordance with organisational policy and procedures
- 1.5 Personnel involved in integrated logistics support are briefed in accordance with standard procedures

### **2 Conduct integrated logistics support activities**

- 2.1 Integrated logistics support methods and techniques appropriate to area are employed in accordance with plans, schedules and standard procedures
- 2.2 Integrated logistics support activities are conducted and concluded within resource constraints
- 2.3 Integrated logistics support activities are implemented, monitored and amended based on changing circumstances in accordance with methodologies and procedures
- 2.4 Resources are allocated to integrated logistics support activities in accordance with integrated logistics support plan and resource availability

### **3 Report on integrated logistics support activities**

- 3.1 Integrated logistics support performance is reported to all stakeholders in a transparent manner in accordance with compliance requirements
- 3.2 Integrated logistics support activities are regularly reviewed to ensure systems and/or equipment capability is maintained throughout its life cycle, in accordance with organisational policy and procedure

### **4 Maintain integrated logistics support**

- 4.1 Integrated logistics support records are completed in accordance with relevant policy and procedures

**records**

- 4.2 Integrated logistics support records are amended and documented in accordance with organisational policy and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX4008A Conduct integrated logistics support activities.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIX4008 Conduct integrated logistics support activities

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to and applying relevant data and information management processes
- analysing data and information
- applying relevant integrated logistics support and project management knowledge
- applying integrated logistics support knowledge to assist in work and to guide problem solving
- consulting and negotiating with internal and external stakeholders, and resolving potential areas of conflict or concern to ensure overall objectives are achieved
- displaying resilience by continuing to move forward despite criticism or setbacks
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- identifying, reviewing and analysing relevant information that may impact on or be impacted by integrated logistics support activities
- managing time and prioritising work to ensure objectives are met in accordance with required schedule
- undertaking performance measurement to enable objectives to be measured against defined parameters
- using appropriate information technology and software
- using materiel logistics program strategic objectives to identify long-term factors and external considerations for conducting integrated logistics support activities.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- integrated logistics support processes
- level of written communication required to prepare correspondence and reports
- organisational policy and procedures related to integrated logistics support
- organisational role relevant to integrated logistics support
- product knowledge related to systems and/or equipment in service in the organisation
- reliability, availability and maintainability
- safety, legislative and statutory requirements, including relevant environmental and sustainability issues

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- computer and relevant software
- legislation, guidelines, procedures and protocols relating to integrated logistics support
- integrated logistics support plans and associated subordinate plans.

# **TLIX4009 Apply integrated logistics support processes and procedures**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to apply integrated logistics support processes and procedures in accordance with relevant organisational policy and procedures.

The application of processes and procedures is specific to a variety of component processes including: integrated logistics support administrative procedures, integrated logistics support data collection and storage, and integrated logistics support data retrieval.

This unit was developed for integrated logistics support specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

X – Logistics

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

<b>1 Prepare to apply integrated logistics support processes and procedures</b>	1.1	Requirement for applying integrated logistics support processes and procedures is identified from work requests/instructions and is confirmed
	1.2	Work health and safety (WHS)/occupational health and safety (OHS) requirements, including those contained in organisational procedures, are applied throughout the operation
	1.3	Required resources and equipment are identified, acquired and prepared in accordance with organisational procedures
	1.4	Sources of information relevant to integrated logistics support requirements are identified and relevant information is obtained in accordance with organisational policy and procedures
<b>2 Apply integrated logistics support processes and procedures</b>	2.1	Integrated logistics support processes and procedures are implemented and monitored within resource constraints
	2.2	Integrated logistics support processes and procedures are amended based on changing circumstances in accordance with organisational policy and procedures
<b>3 Monitor and report on integrated logistics support processes and procedures</b>	3.1	Integrated logistics support outcomes are reported to appropriate personnel in accordance with organisational policy and procedures
	3.2	Integrated logistics support processes and procedures are monitored and reviewed to ensure systems and/or equipment capability is maintained, in accordance with organisational policy and procedures
<b>4 Maintain records for integrated logistics support</b>	4.1	Integrated logistics support records are maintained in accordance with organisational policy and procedures

**processes and procedures**

4.2

Integrated logistics support records are amended and documented in accordance with organisational policy and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

outcomes.

demonstrate achievement of the element.

**1 Identify requirements for providing materiel sustainment plans**

- 1.1 Sources of information relevant to materiel sustainment plans are identified and relevant information is obtained in accordance with organisational policy and procedures
- 1.2 Currency of information is reviewed and documented in accordance with organisational policy and procedures
- 1.3 Materiel sustainment plans are assessed against reviewed information

**2 Implement materiel sustainment plans**

- 2.1 Performance indicators and other criteria for measuring achievement are developed
- 2.2 Materiel sustainment risks and impacts relevant to the plan are identified, reported and managed
- 2.3 Materiel sustainment plans are implemented in accordance with organisational policy and procedures
- 2.4 Participation and contribution to materiel sustainment activities is established and maintained in accordance with schedule

**3 Monitor and report on materiel sustainment plans implementation**

- 3.1 Materiel sustainment plans are monitored and regularly reviewed in accordance with organisational policy and procedures
- 3.2 Plans are amended and documented in accordance with organisational policy and procedures
- 3.3 Performance measures are monitored to ensure they address all key aspects of organisational performance and meet stakeholder requirements
- 3.4 Performance data is analysed on a regular basis in terms of indicators and compliance with organisational policy and procedures
- 3.5 Strategic performance is reported to all stakeholders in a transparent manner in accordance with compliance requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

# Assessment Requirements for TLIX4016 Implement and monitor materiel sustainment plans

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing data and information
- applying relevant materiel sustainment and project management knowledge to work and to guide problem solving
- applying relevant implementation processes
- developing and/or complying with procedures to implement and monitor materiel sustainment plans
- displaying resilience by continuing to move forward despite criticism or setbacks, remaining positive and responding to pressure in a controlled manner
- ensuring mechanisms are in place to monitor materiel sustainment plans
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- monitoring and reporting on implementation processes
- negotiating and communicating with key internal and external stakeholders, receiving their input, and resolving potential areas of conflict or concern to ensure overall objectives are achieved
- undertaking performance measurement to enable objectives to be measured against defined parameters
- using organisational strategic objectives to identify long-term factors and external considerations for implementing materiel sustainment plans.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- codification and cataloguing processes
- configuration management
- contract management
- level of written communication required to prepare correspondence and reports
- logistics support analysis principles and processes
- materiel sustainment processes related to planning
- organisational policy and procedures impacting on materiel sustainment
- organisational role relevant to materiel sustainment
- performance measurement
- product knowledge related to systems and/or equipment in service in the organisation
- safety, legislative and statutory requirements, including environmental and sustainability issues
- technical regulatory framework.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

- 3.2 Materiel sustainment processes and procedures are monitored and reviewed to ensure systems and/or equipment capability is maintained, in accordance with organisational policy and procedures

### **4 Maintain records for materiel sustainment processes and procedures**

- 4.1 Materiel sustainment records are completed in accordance with organisational policy and procedures
- 4.2 Materiel sustainment records are amended and documented in accordance with organisational policy and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX4018A Apply materiel sustainment processes and procedures.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIX4018 Apply materiel sustainment process and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to and applying relevant data collection, storage and retrieval requirements
- applying materiel sustainment knowledge to work and to guide problem solving
- displaying resilience by continuing to move forward despite criticism or setbacks
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- operating equipment and systems relevant to materiel sustainment activities
- using appropriate information technology and software.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- level of written communication required to prepare letters and reports
- materiel life cycle
- materiel sustainment administrative procedures
- materiel sustainment data collection and storage requirements
- materiel sustainment data retrieval procedures
- organisational role relevant to materiel sustainment
- safety, legislative and statutory requirements, including relevant environmental and sustainability issues.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- computer and relevant software
- legislation, guidelines, procedures and protocols relating to materiel sustainment
- materiel sustainment plans.

# TLIX4022 Implement and monitor configuration management plans

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to implement and monitor configuration management plans in accordance with relevant organisational policy and procedures

It includes adjusting current and future activity, amending plans, acquiring resources, liaising with stakeholders and providing associated reports.

This unit was developed for configuration management specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Identify requirements for providing configuration management**

- 1.1 Sources of information relevant to configuration management plans are identified and relevant information is obtained in accordance with organisational policy and procedures
- 1.2 Currency of information is reviewed and documented in accordance with organisational policy and procedures
- 1.3 Configuration management plans are assessed against reviewed information

### **2 Implement configuration management plans**

- 2.1 Performance indicators and other criteria for measuring achievement are implemented
- 2.2 Configuration management risks and impacts relevant to plans are identified, reported and managed
- 2.3 Configuration management plans are implemented in accordance with organisational policy and procedures
- 2.4 Participation and contribution to configuration management activities is established and maintained in accordance with plans

### **3 Monitor and report on implementation of configuration management plans**

- 3.1 Configuration management plans are monitored and regularly reviewed in accordance with organisational policy and procedure
- 3.2 Plans are amended and documented in accordance with organisational policy and procedures
- 3.3 Performance measures are monitored to ensure they address all key aspects of organisational performance and meet stakeholder interests
- 3.4 Performance data is analysed on a regular and planned basis, in terms of indicators and compliance with organisational policy and procedures
- 3.5 Performance is reported to all stakeholders in a transparent manner in accordance with compliance requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX4022A Implement and monitor configuration management plans.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIX4022 Implement and monitor configuration management plans

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing data and information
- applying relevant configuration management plans and project management knowledge to work being performed and to guide problem solving
- applying relevant implementation processes
- displaying resilience by continuing to move forward despite criticism or setbacks
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- implementing processes to enable configuration management requirements to be effectively transitioned across the life cycle, including integrated logistics support considerations, and validation and verification activities, including environmental and sustainability issues
- managing time and prioritising work to ensure objectives are met in accordance with the schedule
- monitoring and reporting on configuration management plan processes
- monitoring processes to ensure that configuration management systems continue to enable the operational requirements to be attained – this may include performance metrics
- negotiating and communicating effectively with key internal and external stakeholders and resolving potential areas of conflict or concern to ensure overall configuration management objectives are achieved
- using organisational strategic objectives to identify and assess potential alliances and effective strategies.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- codification and cataloguing processes
- configuration management
- configuration management processes related to planning
- level of written communication required to prepare correspondence and reports
- organisational policy and procedures impacting on configuration management
- organisational role relevant to configuration management
- product knowledge related to systems and/or equipment in service in the organisation
- safety, legislative and statutory requirements, including environmental and sustainability issues
- technical regulatory framework.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIX4023 Conduct configuration management activities

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to conduct configuration management activities in accordance with relevant organisational policy and procedures.

It includes the requirement to conduct a range of processes including capturing, recording, recovering and analysing data; maintaining associated workplace networks; and stakeholder requirements.

This unit was developed for configuration management specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Prepare to conduct configuration management activities**

- 1.1 Stakeholders are identified and consulted on materiel, and materiel systems needs and capabilities in accordance with organisational policy and procedures
- 1.2 Effective relationships are developed with stakeholders through consultation
- 1.3 Legislation and organisational policy and procedures that may impact on configuration management activities are identified and analysed
- 1.4 Sources of information relevant to configuration management activities are identified and relevant information is obtained in accordance with organisational policy and procedures
- 1.5 Personnel involved in configuration management activities are briefed in accordance with standard procedures

### **2 Conduct configuration management activities**

- 2.1 Configuration management methods and techniques appropriate to area are employed in accordance with plans, schedules and standard procedures
- 2.2 Configuration management activities are conducted and concluded within resource constraints
- 2.3 Configuration management activities are implemented, monitored and amended based on changing circumstances in accordance with methodologies and procedures
- 2.4 Resources are allocated to configuration management activities in accordance with configuration management plan and resource availability

### **3 Report on configuration management**

- 3.1 Configuration management performance is reported to all stakeholders in a transparent manner in accordance with compliance requirements
- 3.2 Configuration management reports are regularly reviewed to ensure systems and/or equipment capability is maintained throughout its life cycle, in accordance with organisational policy and procedures

### **4 Maintain configuration**

- 4.1 Configuration management records are completed in

**management records**                      accordance with relevant policy and procedures

- 4.2 Configuration management records are amended and documented in accordance with organisational policy and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX4023A Conduct configuration management activities.

# TLIX4024 Apply configuration management processes and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to apply configuration management processes and procedures in accordance with relevant organisational policy and procedures.

The application of processes and procedures is specific to a variety of component processes including: configuration management administrative procedures, configuration management data collection and storage, and configuration management data retrieval.

This unit was developed for configuration management specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Prepare to apply configuration management processes and procedures**

- 1.1 Requirements for applying processes and procedures are identified from work requests/instructions and are confirmed
- 1.2 Work health and safety (WHS)/occupational health and safety (OHS) requirements, including those contained in organisational procedures, are applied throughout the operation
- 1.3 Required resources and equipment are identified, acquired and prepared in accordance with organisational procedures
- 1.4 Sources of information relevant to configuration management requirements are identified and relevant information is obtained in accordance with organisational policy and procedures

### **2 Apply configuration management processes and procedures**

- 2.1 Configuration management processes and procedures are implemented and monitored within resource constraints
- 2.2 Configuration management processes and procedures are amended based on changing circumstances in accordance with organisational policy and procedures

### **3 Monitor and report on configuration management processes and procedures**

- 3.1 Configuration management outcomes are reported to appropriate personnel in accordance with organisational policy and procedures
- 3.2 Configuration management processes and procedures are monitored and reviewed to ensure systems and/or equipment capability is maintained, in accordance with organisational policy and procedures

### **4 Maintain records for configuration management processes and procedures**

- 4.1 Configuration management records are maintained in accordance with organisational policy and procedures
- 4.2 Configuration management records are amended and documented in accordance with organisational policy and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

# TLIX4026 Apply codification and cataloguing processes and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to collect, analyse and catalogue codification data and information in accordance with relevant organisational policy and procedures.

It includes identifying required codification information, analysing and preparing information for use, providing explanatory information and cataloguing information.

This unit was developed for codification and cataloguing specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

# TLIX4027 Assess maintenance spares and manage repairable items

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to assess spares and manage repairable items in maintenance activities in accordance with relevant organisational policy and procedures, and relevant regulations.

This unit was developed for materiel sustainment specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

- |   |  |
|---|--|
| <b>1 Perform spares assessment activities</b> | <ul style="list-style-type: none"><li>1.1 Organisation spares assessment and supply information systems are identified and applied</li><li>1.2 Maintenance data, spares usage data and trends are monitored, and required holdings of spares are varied as required</li><li>1.3 Spares availability problems are identified and strategies are determined to resolve problems</li><li>1.4 Acceptable sources of suitable substitute parts are identified and requirements for documentation are specified in accordance with organisational policy and procedures</li><li>1.5 Configuration management requirements are observed in spares assessing</li></ul> |
| <b>2 Manage repairable items</b>              | <ul style="list-style-type: none"><li>2.1 Maintenance and reliability data is monitored and changes to maintenance programs are proposed as required</li><li>2.2 Documentation is raised to allocate repairable items to maintenance facilities in accordance with contractual requirements, and organisational policy and procedures</li><li>2.3 Specific investigation or additional maintenance requirements are determined</li></ul>   |
| <b>3 Maintain records</b>                     | <ul style="list-style-type: none"><li>3.1 Data for input to integrated logistics support (ILS) records is provided as required</li><li>3.2 Systems, procedures and records associated with documenting performance are managed in accordance with organisational requirements</li></ul>  |

# Assessment Requirements for TLIX4027 Assess maintenance spares and manage repairable items

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- administering spares, services contracts and their deliverables effectively
- analysing and interpreting assessment information to determine where internal and external factors impact on assessing spares and managing repairable items
- communicating with stakeholders
- consulting and negotiating with internal and external stakeholders effectively and resolving potential areas of conflict or concern to ensure overall objectives are achieved
- drawing on information from a variety of sources using research, analysis and judgement to develop assessment requirements
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- initiating and efficiently monitoring processes
- initiating remedial action required
- managing materiel sustainment operations effectively and efficiently
- preparing and providing relevant reports and documentation
- undertaking procurement activities
- using appropriate information technology and software to assess and manage repairable items
- using organisational strategic objectives to identify long-term factors and external considerations.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- codification and cataloguing processes
- configuration management
- industrial base capability
- integrated logistics support
- legislative and regulatory environment, including environmental and sustainability issues
- logistics governance
- logistics support analysis principles and processes
- management processes
- materiel sustainment
- organisational policy and procedures
- organisational role relevant to materiel sustainment
- performance measurement
- product knowledge related to systems and/or equipment in service in the organisation
- safety, legislative and statutory requirements, including relevant environmental and sustainability issues.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

- computer and relevant software
- legislation, guidelines, procedures and protocols relating to spares and repairable items
- maintenance plans.

## **TLIX4028 Apply knowledge of logistics**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to analyse and apply knowledge of logistics in accordance with relevant organisational policy and procedures.

It includes accessing and interpreting relevant logistics information and applying this information in the workplace.

This unit applies to emerging logistics specialists who need an understanding of the functions and activities of the wider organisation but is applicable to any individual in this field of work.

The application of this knowledge is required by people who are not currently specialists in the field but need the knowledge to inform their decision making.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

X – Logistics

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Access and interpret relevant logistics information

#### 2 Use knowledge of logistics

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Relevant logistics requirements are identified and obtained

1.2 Logistics information obtained is analysed to determine organisational application

1.3 Analysis results are documented and recommendations relevant to logistics are determined

2.1 Logistics requirements and recommendations are applied in accordance with organisational policy and procedures

2.2 Effectiveness of the recommendations is assessed, reviewed and recorded in accordance with organisational policy and procedures

2.3 Recommendations are adjusted as required and documented for future application in accordance with organisational policy and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX4028A Apply knowledge of logistics.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIX4028 Apply knowledge of logistics

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to relevant logistics requirements
- analysing and interpreting logistics information to determine where internal and external factors impact on the logistics requirements, and adjusting planning accordingly
- applying knowledge of logistics to assist work and to guide problem solving
- communicating key logistics information clearly, presenting information confidently and selecting the appropriate communication medium for a range of audiences
- using appropriate information technology and software.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- logistics information or information systems
- logistics knowledge relevant to the work performed
- relevant and industry specific information regarding the support to capability and support to operations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, computer and relevant software, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

## **TLIX4029 Apply knowledge of integrated logistics support**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to analyse and apply knowledge of integrated logistics support in accordance with relevant organisational policy and procedures.

The application of this knowledge is required by people who are not integrated logistics support specialists but who need the knowledge to inform their decision making. The application of integrated logistics support knowledge is specific to a variety of component processes in material logistics activities.

This unit was developed for logistics specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

X – Logistics

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

### **1 Access and interpret relevant integrated logistics support information**

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Relevant integrated logistics support requirements are identified and obtained
- 1.2 Integrated logistics information obtained is analysed to determine relevance and application to the organisation
- 1.3 Outcomes of the analysis are documented and recommendations relevant to integrated logistics support are determined

### **2 Use knowledge of integrated logistics support**

- 2.1 Integrated logistics support requirements and recommendations relevant to materiel and materiel logistics are applied in accordance with organisational policy and procedures
- 2.2 Effectiveness of recommendations is assessed, reviewed and recorded in accordance with organisational policy and procedures
- 2.3 Recommendations are adjusted as required and documented for future application in accordance with organisational policy and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

# **TLIX4033 Apply technical regulatory framework compliance management systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to apply and validate technical regulatory framework compliance management systems, processes and procedures established by an organisation to fulfil its obligations and responsibilities under applicable compliance requirements.

This unit was developed for technical regulatory framework specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

X – Logistics

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Prepare for compliance roles and responsibilities**

- 1.1 Structure of the organisation is examined to identify roles, authorities, accountabilities and responsibilities of various managers and operational staff, in maintaining compliance within the technical regulatory framework
- 1.2 Technical regulatory framework compliance requirements applicable to work area/operational unit are identified, confirmed and interpreted
- 1.3 Own or team specific responsibilities are identified and clarified
- 1.4 Feedback and performance indicators on the operation of the technical compliance management processes and procedures are reviewed and agreed with manager/team leader
- 1.5 Appropriate briefings and training are participated in to ensure jobholder is aware of roles and responsibilities within planned technical regulatory framework compliance management system

### **2 Apply technical compliance management system**

- 2.1 Technical regulatory framework components of technical compliance management system are confirmed, and authorised procedures for their implementation are clarified
- 2.2 Resources for applying technical regulatory framework compliance management system are accessed and utilised in accordance with organisational policy and procedures
- 2.3 Implementation plan and schedule are accessed and applied in collaboration with managers and operations staff, in accordance with relevant technical regulatory framework
- 2.4 Essential technical regulatory framework preconditions for any duty, function or activity are confirmed before proceeding with designated or assigned work

### **3 Validate individual application of technical compliance management**

- 3.1 Specified information on own role and responsibilities within technical compliance management system is gathered from appropriate sources

## processes

- 3.2 Feedback and performance indicator satisfaction data is prepared, reviewed and processed in accordance with agreed workplace practices
- 3.3 Problems in applying technical compliance management system and in particular, breach of compliance requirements, are identified and appropriate action is initiated to address problems concerned
- 3.4 Reports on identified breaches of compliance requirements and related action taken are prepared and processed to responsible authority/stakeholder
- 3.5 Records of technical regulatory framework activities are maintained in accordance with approved systems requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX4033A Apply technical regulatory framework compliance management systems.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIX4033 Apply technical regulatory framework compliance management systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to and applying relevant data collection, storage and retrieval requirements
- applying technical regulatory framework compliance management system knowledge to work being performed and to guide problem solving
- applying technical regulatory framework knowledge relevant to work being performed
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- operating equipment and systems relevant to technical regulatory framework activities
- using appropriate information technology and software.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- configuration management
- elements of technical regulatory framework compliance management systems including:
  - breach management policies and processes including the identification, classification, investigation, rectification and reporting of breaches in compliance requirements
  - compliance complaints handling systems
  - compliance related management information systems
  - compliance reporting procedures
  - continuous improvement processes for compliance including validation and review
  - corporate compliance induction and training processes
  - documentation of compliance requirements relevant to the specified work role/area
  - liaison procedures with relevant internal personnel on compliance related matters

- processes for internal promulgation of information on compliance requirements
- reporting processes on compliance including reports on breaches and rectification action
- specification of local work area compliance management functions, authorities, accountabilities and responsibilities under a technical regulatory framework
- techniques and performance indicators for validating individual application of a compliance system
- own role in relation to wider organisational or project context
- quantitative and qualitative data analysis techniques relevant to compliance applications
- relevant Australian Standards and international standards
- sources of data relevant to compliance, including environmental and sustainability issues
- technical regulatory framework compliance requirements that are based on:
  - codes of practice
    - environmental, sustainability policies and legislation
    - internal policies
    - organisational policy and procedures
    - standard operating procedures
    - standards
- techniques suitable for applying compliance related systems and activities.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

- computer and relevant software
- legislation, guidelines, procedures and protocols relating to technical regulatory framework compliance management system
- technical regulatory framework compliance management systems plans.

# TLIX4034 Apply technical risk management systems and techniques

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to assist with aspects of risk management in relation to the technical integrity of an organisation's materiel. It specifically involves assisting in assessing, controlling and reviewing risks associated with the organisation's materiel.

This unit was developed for technical regulatory framework specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Assist with risk assessment**

- 1.1 Contribution is made to identify, analyse, evaluate and prioritise risks to technical integrity of the organisation's materiel
- 1.2 Within delegated technical/engineering authority, input is provided to develop risk management strategies and risk management plans within established guidelines
- 1.3 Established risk analysis methods, techniques and tools are used to assist in assessing risks in accordance with organisational plans
- 1.4 Reporting mechanisms for risks to technical integrity are incorporated, in accordance with organisational plans

### **2 Conduct risk control activities**

- 2.1 Risk control activities are undertaken in accordance with organisational plans
- 2.2 Risks to technical integrity are acted on within technical/engineering authority or reported to others for response
- 2.3 Contribution is made to implementing agreed risk approaches and amending plans to reflect changing context
- 2.4 Opportunities are identified and reported for action in the same way as risks

### **3 Contribute to assessing risk management outcomes**

- 3.1 Contribution is made to the ongoing review of the technical integrity of organisational materiel to determine the effectiveness of risk management activities by accessing data and available information
- 3.2 Risk management issues and responses are reported to others for lessons learned or application in future technical/engineering activities

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX4034A Apply technical risk management systems and techniques.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIX4034 Apply technical risk management systems and techniques

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and on at least one occasion and include:

- adhering to and applying relevant data collection, storage and retrieval requirements
- applying knowledge of technical risk management systems to work being performed and to guide problem solving
- applying safety, legislative and statutory requirements, including environmental, sustainability issues relevant to technical risk management
- applying technical risk management knowledge relevant to work being performed
- completing work area housekeeping requirements including documenting risk management activity and process outcomes
- contributing to reports of results
- controlling risk
- developing risk management strategies
- identifying risk
- implementing, monitoring, and successfully completing risk management activities
- interpreting organisational role relevant to technical risk management
- modifying activities to cater for variations in workplace context and environment
- monitoring risks (with emphasis on variation management)
- operating equipment and systems relevant to technical risk management activities
- reviewing risk management within the project
- using appropriate information technology and software
- working and communicating effectively and positively with others involved in the work.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- organisational engineering management plan and risk management plan
- own role in relation to wider organisational or project context
- risk management as applied in a technical/engineering context, including principles, tools, techniques, standards and processes
- technical regulatory framework.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- computer and relevant software
- legislation, guidelines, procedures and protocols relating to technical risk management systems and techniques
- engineering management plans, organisational plans, risk management plans.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

## **TLIX4035 Maintain technical data and information**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to maintain organisational technical data and information in good order on a day-to-day basis in accordance with relevant organisational policy and procedures.

It includes gathering technical data and information that is subject to organisational updates, performing required updates, retrieving reports from a data management system in response to a request, and monitoring aspects relevant to immediate business unit requirements.

This unit was developed for technical regulatory framework specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

X – Logistics

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Collate technical data and information**

- 1.1 Technical data and information to be incorporated into organisation's records system are identified in accordance with data and technical information management system requirements
- 1.2 Technical data and information to be incorporated into organisation's information systems is recorded in accordance with data and technical information management system requirements
- 1.3 Technical data and information is sorted and catalogued in accordance with workplace requirements
- 1.4 Security and access requirements for technical data and information are adhered to in accordance with management system

### **2 Update technical data and information system**

- 2.1 Technical data and information of direct interest to business unit is routinely monitored
- 2.2 New or revised technical data and information is identified and incorporated in accordance with authorised systems
- 2.3 Movement and use of technical data and information is updated in accordance with authorised systems
- 2.4 Technical data and information system is updated accurately within timeframes set by authorised systems
- 2.5 Technical data and information is archived or disposed of in accordance with authorised systems

### **3 Prepare reports from organisation's technical data management system**

- 3.1 Request for reports is interpreted and clarification of content and frequency is sought as required
- 3.2 Reports are prepared from organisation's technical data management system in accordance with instructions or request
- 3.3 Format and style of reports as outlined in organisational procedures are complied with
- 3.4 All reports from organisation's technical data management system are prepared within workplace

requirements in accordance with security and access procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIX4035A Maintain technical data and information.

## **Links**

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIX4035 Maintain technical data and information

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing data and information
- applying technical data and information plans knowledge to work being performed and to guide problem solving
- applying relevant implementation processes
- applying technical data and information and project management knowledge in technical data and information systems
- completing work area housekeeping requirements including documenting technical data and information management activity and process outcomes
- consulting and negotiating effectively with internal and external stakeholders , receiving their input and resolving potential areas of conflict or concern to ensure overall technical data and information systems objectives are achieved
- contributing to reports of results
- displaying resilience by continuing to move forward despite criticism or setbacks
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- implementing processes to enable new technical data and information system requirements to be effectively transitioned across the life cycle – including integrated logistics support considerations, environmental and sustainability issues, and validation and verification activities
- maintaining technical data and information management systems successfully
- modifying activities to cater for variations in workplace context and environment
- monitoring and reporting on implementation processes
- monitoring processes to ensure technical data and information systems continue to enable operational requirements to be attained, which may involve performance metrics
- working and communicating effectively and positively with others involved in the workplace.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable standards
- data management principles and processes including functional requirements for data management
- own role in relation to wider organisational or project context
- relevant details of technical regulatory framework, organisational engineering management plans and technical data management plan.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- computer and relevant software
- legislation, guidelines, procedures and protocols relating to technical data and information
- engineering management plans, technical data management plans, and technical data and information plans.

# TLIX5003 Develop and review integrated logistics support plans

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to develop and review integrated logistics support plans and associated subordinate plans to ensure efficient and effective delivery of integrated logistics support across the materiel and materiel system life cycle.

This unit was developed for integrated logistics support specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the                      Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

**1 Identify integrated logistics support requirements**

- 1.1 Integrated logistics support planning requirements are identified in accordance with organisational policy and procedures
- 1.2 Sources of information relevant to integrated logistics support are identified and relevant information is accessed in accordance with organisational policy and procedures
- 1.3 Standards and legislation applicable to integrated logistics support are identified and accessed
- 1.4 Specific integrated logistics support requirements are assessed against available information
- 1.5 Costing analysis of requirements is conducted in accordance with organisational policy and procedures

**2 Prepare integrated logistics support plans**

- 2.1 Organisational policy and procedures relevant to integrated logistics support requirements are identified and interpreted
- 2.2 Stakeholder consultation is conducted in accordance with relevant organisational policy and procedures
- 2.3 Integrated logistics support plans are developed in accordance with legislative requirements and organisational policy and procedures
- 2.4 Integrated logistics support plans are promulgated in accordance with organisational policy and procedures

**3 Review integrated logistics support plans**

- 3.1 Integrated logistics support plans are reviewed in accordance with relevant organisational policy and procedures
- 3.2 Required changes to integrated logistics support plans are identified and prepared in accordance with relevant organisational policy and procedures
- 3.3 Amendments to integrated logistics support plans are prepared and promulgated to relevant stakeholders or personnel in accordance with relevant organisational policy and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX5003A Develop and review integrated logistics support plans.

# Assessment Requirements for TLIX5003 Develop and review integrated logistics support plans

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- applying integrated logistics support and project management knowledge in planning
- consulting and negotiating with internal and external stakeholders and resolving potential areas of conflict or concern to ensure overall objectives are achieved
- displaying resilience by continuing to move forward despite criticism or setbacks
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- identifying requirements for plans and adjusting them as necessary to ensure effective and efficient performance
- initiating and efficiently monitoring processes
- initiating remedial action required
- undertaking performance measurement to enable objectives to be measured against defined parameters
- undertaking research and analysis to determine where internal and external factors impact on integrated logistics support requirements, and adjust planning accordingly
- using appropriate information technology and software
- using organisational strategic objectives to identify long-term factors and external considerations for integrated logistics support planning.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- codification and cataloguing processes
- industrial base capability
- integrated logistics support
- international agreements
- interoperability
- legislative and regulatory environment as it pertains to materiel logistics
- logistics governance
- logistics support analysis principles and processes
- materiel sustainment
- organisational policy and procedures
- organisational role relevant to integrated logistics support
- performance measurement
- planning processes
- product knowledge related to systems and/or equipment in service in the organisation
- safety, legislative and statutory requirements relevant to integrated logistics support, including environmental and sustainability issues
- supply chain concepts.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIX5004 Develop integrated logistics support processes and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to develop integrated logistics support processes and procedures in accordance with relevant organisational policy and procedures.

It includes anticipating and confirming the need for development, the development processes, gathering and analysing information, determining direction, and drafting, releasing and promoting the processes. It also includes the initial development of procedures integral to the processes.

This unit was developed for integrated logistics support specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Analyse integrated logistics support environment**

- 1.1 Operation of integrated logistics support environment is analysed, and key factors and issues are identified
- 1.2 External and internal factors likely to impact on integrated logistics support needs and capabilities are continually monitored and analysed
- 1.3 Stakeholders are identified and consulted on materiel and materiel systems needs and capabilities, in accordance with organisational policy and procedures
- 1.4 Legislation and organisational policy and procedures that may impact on integrated logistics support activity are identified and analysed

### **2 Develop integrated logistics support processes and procedures**

- 2.1 Consultation and negotiation with stakeholders is conducted in accordance with organisational policy and procedures
- 2.2 Integrated logistics support processes for materiel and materiel systems are developed and documented in accordance with logistics support analysis principles
- 2.3 Costing analysis of options is undertaken and documented in accordance with organisational policy and procedures
- 2.4 Procedures required for integrated logistics support processes are identified, developed and documented
- 2.5 Processes and procedures are approved in accordance with organisational policy and procedures

### **3 Communicate integrated logistics support processes and procedures**

- 3.1 Stakeholders are fully informed of outcomes, in accordance with organisational policy and procedures
- 3.2 Integrated logistics support processes and procedures are promulgated in accordance with organisational policy and procedures
- 3.3 Policy and procedures are promoted in accordance with relevant organisational policy and procedures

### **4 Review integrated logistics support processes and**

- 4.1 Performance systems are monitored and analysed to assess impact of processes and procedures in achieving

**procedures**

plans and targets

- 4.2 Integrated logistics support processes and procedures are reviewed in accordance with organisational policy and procedures
- 4.3 Required changes to integrated logistics support processes and procedures are identified and prepared in accordance with relevant organisational policy and procedures
- 4.4 Amendments to integrated logistics support policy and procedures are documented and promulgated to relevant stakeholders in accordance with relevant organisational policy and procedures

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

**Unit Mapping Information**

This unit replaces and is equivalent to TLIX5004A Develop integrated logistics support processes and procedures.

**Links**

# Assessment Requirements for TLIX5004 Develop integrated logistics support processes and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- applying integrated logistics support and project management knowledge when developing processes and procedures
- consulting and negotiating with internal and external stakeholders and resolving potential areas of conflict or concern to ensure overall objectives are achieved
- developing processes and procedures that can be readily understood by users
- displaying resilience by continuing to move forward despite criticism or setbacks
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- identifying requirements for processes and procedures, and adjusting them as necessary to ensure effective and efficient performance of processes
- initiating and efficiently monitoring processes
- initiating remedial action required
- undertaking performance measurement to enable objectives to be measured against defined parameters
- undertaking research and analysis to determine where internal and external factors impact on integrated logistics support processes and procedures, and adjusting accordingly
- using appropriate information technology and software
- using organisational strategic objectives to identify long-term factors and external considerations for developing integrated logistics support processes and procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- codification and cataloguing processes
- integrated logistics support
- international agreements
- interoperability
- logistics support analysis principles and processes
- management processes
- materiel sustainment
- organisational policy and procedures
- organisational role relevant to integrated logistics support
- performance measurement
- product knowledge related to systems and/or equipment in service in the organisation
- safety, legislative and statutory requirements relevant to integrated logistics support including environmental and sustainability issues
- supply chain concepts.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

# TLIX5005 Manage integrated logistics support operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to prepare for integrated logistics support operations, to manage those operations throughout the materiel life cycle and to report on those operations in the organisational environment.

This unit was developed for integrated logistics support specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the                      Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

**1 Identify integrated logistics support management requirements**

- 1.1 Sources of information relevant to integrated logistics support are identified and relevant information is obtained in accordance with organisational policy and procedures
- 1.2 Currency of information is reviewed and documented in accordance with organisational policy and procedures
- 1.3 Integrated logistics support management requirements are defined and documented in accordance with organisational policy and procedures

**2 Develop integrated logistics support management strategies**

- 2.1 Consultation with stakeholders is conducted in accordance with organisational policy and procedures
- 2.2 Integrated logistics support management strategies are developed and recorded taking into account materiel and/or materiel system, in accordance with organisational policy and procedures
- 2.3 Key performance indicators are developed and documented in accordance with organisational policy and procedures
- 2.4 Costing analysis processes are developed and documented in accordance with organisational policy and procedure

**3 Apply integrated logistics support management strategies**

- 3.1 Integrated logistics support risks and impacts are identified, recorded and managed
- 3.2 Integrated logistics support procedures are applied in accordance with legislative requirements
- 3.3 Management activities are carried out in accordance with organisational policy and procedures
- 3.4 Failures and variances are documented, reported and managed in accordance with organisational policy and procedure
- 3.5 Participation and contribution to integrated logistics support activities is established and maintained

**4 Review integrated logistics support operations**

- 4.1 Performance systems and processes are monitored and analysed to assess progress in achieving plans and targets
- 4.2 Systems, procedures and records associated with documenting performance are managed in accordance with organisational requirements

- 4.3 Integrated logistics support operations are reviewed in accordance with organisational policy and procedures
- 4.4 Changes required are identified and prepared in accordance with organisational policy and procedures
- 4.5 Amendments to integrated logistics support operations are incorporated into plans and promulgated to relevant stakeholders, in accordance with organisational policy and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX5005A Manage integrated logistics support operations.

## Links

# Assessment Requirements for TLIX5005 Manage integrated logistics support operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to relevant occupational health and safety (OHS) requirements
- applying integrated logistics support and project management knowledge when developing processes and procedures
- consulting and negotiating with internal and external stakeholders and resolving potential areas of conflict or concern to ensure overall objectives are achieved
- developing processes and procedures that can be readily understood by users
- displaying resilience by continuing to move forward despite criticism or setbacks
- identifying integrated logistics support operation processes
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- identifying, acquiring and adjusting resources as required to ensure effective and efficient performance of processes
- initiating and efficiently monitoring processes
- initiating remedial action required
- undertaking performance measurement to enable objectives to be measured against defined parameters
- undertaking research and analysis to determine where internal and external factors impact on integrated logistics support process and procedures, and adjusting accordingly
- using appropriate information technology and software
- using organisational strategic objectives to identify long-term factors and external considerations for developing integrated logistics support processes and procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- codification and cataloguing processes
- industrial base capability
- integrated logistics support
- international agreements
- interoperability
- legislative and regulatory environment as it pertains to materiel logistics including environmental and sustainability issues
- logistics governance
- logistics support analysis principles and processes
- management processes
- materiel sustainment
- organisational policy and procedures
- organisational role relevant to integrated logistics support
- performance measurement
- product knowledge related to systems and/or equipment in service in the organisation
- safety, legislative and statutory requirements relevant to integrated logistics support including environmental and sustainability issues
- supply chain concepts.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIX5006 Manage verification and validation

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to verify and validate integrated logistics support processes and to manage verification and validation processes within the organisation.

Verification and validation is a generic term for the complete range of checks performed on a system to increase confidence that the system is suitable for its intended purpose.

This unit was developed for integrated logistics support specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Identify requirements for verification and validation management strategies**

1.1 Sources of information relevant to verification and validation are identified and relevant information is obtained in accordance with organisational policy and procedures

1.2 Currency of information is reviewed and documented in accordance with organisational policy and procedures

1.3 Materiel verification and validation requirements are defined and documented

### **2 Develop verification and validation management strategies**

2.1 Consultation with stakeholders is conducted in accordance with organisational policy and procedures

2.2 Verification and validation processes are developed and recorded taking into account materiel and/or materiel system, in accordance with organisational policy and procedures

### **3 Implement verification and validation management strategies**

3.1 Integrated logistics support risks and impacts relevant to verification and validation processes are identified, recorded and managed

3.2 Verification and validation processes are applied in accordance with legislative requirements

3.3 Activities are carried out in accordance with organisational policy and procedures

3.4 Participation and contribution to verification and validation process activities is established and maintained

### **4 Review verification and validation management strategies**

4.1 Verification and validation processes are reviewed in accordance with organisational policy and procedures

4.2 Changes required are identified and prepared in accordance with organisational policy and procedures

4.3 Amendments to verification and validation processes are incorporated and distributed to relevant personnel in accordance with organisational policy and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX5006A Manage verification and validation.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIX5006 Manage verification and validation

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing information and identifying areas that impact on verification and validation processes
- applying verification and validation knowledge relevant to work being performed
- consulting and negotiating with internal and external stakeholders and resolving potential areas of conflict or concern to ensure overall objectives are achieved
- displaying resilience by continuing to move forward despite criticism or setbacks
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- identifying, acquiring and adjusting resources as required to ensure effective and efficient performance of processes
- initiating and efficiently monitoring processes
- initiating remedial action required
- undertaking performance measurement to enable objectives to be measured against defined parameters
- using appropriate information technology and software
- using materiel logistics program strategic objectives to identify long-term factors and external considerations for validation and verification processes.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- codification and cataloguing processes
- industrial base capability
- integrated logistics support processes relevant to verification and validation processes
- international agreements
- interoperability
- legislative and regulatory environment as it pertains to materiel logistics, including environmental and sustainability issues
- level of written communication required to prepare complex correspondence and reports
- logistics governance
- logistics support analysis principles and processes
- organisational policy, plans and procedures relevant to verification and validation processes
- organisational role relevant to verification and validation processes
- performance measurement
- safety, legislative and statutory requirements, including environmental and sustainability issues
- supply chain concepts.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- computer and relevant software
- legislation, guidelines, procedures and protocols relating to verification and validation
- verification and validation plans.

# TLIX5010 Provide specialist integrated logistics support advice

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to provide specialist advice related to integrated logistics support in accordance with relevant organisational policy and procedures.

This unit specifically addresses advice that is relevant to integrated logistics support activity and is not intended to cover technical advice that is provided in a broader context of the organisational endeavour or a professional discipline.

This unit was developed for integrated logistics support specialists working within materiel logistics but is applicable to individuals in broader logistics roles

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

- |  |   |
|--|---|
| <b>1 Identify and analyse issue/s</b>                              | 1.1 Circumstances that require providing advice relating to integrated logistics support are observed, received and clarified           |
|  | 1.2 Issue/s are identified and confirmed, as required, through consultation with relevant personnel                                     |
|  | 1.3 Circumstances are analysed and issue/s are interpreted and clearly defined  |
|  | 1.4 Research related to issue/s is conducted and advice of relevant personnel is sought to clarify unclear findings                     |
| <b>2 Formulate options for integrated logistics support advice</b> | 2.1 Options related to providing advice are identified and evaluated  |
|  | 2.2 Options are prioritised and preferred option/s is chosen  |
| <b>3 Provide specialist integrated logistics support advice</b>    | 3.1 Advice is formulated and discussed with stakeholders  |
|  | 3.2 Stakeholder requirements are negotiated, documented and incorporated within proposed advice   |
|  | 3.3 Concluding advice is provided in accordance with ethical and practical guidelines in accordance with specified resource constraints |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX5010A Provide specialist integrated logistics support advice.

# Assessment Requirements for TLIX5010 Provide specialist integrated logistics support advice

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- displaying insight into how industry operates and drivers that influence industry dealings
- displaying resilience by continuing to move forward despite criticism or setbacks
- explaining key issues and persuasively negotiating to ensure integrated logistics support considerations are addressed
- focusing on clear communication of integrated logistics support information, presenting information confidently and selecting appropriate medium for communication to influence a range of audiences
- focusing on gaining a clear understanding of others' comments by listening and adapting to audience to ensure integrated logistics support considerations are addressed
- identifying, reviewing and analysing information that may impact on integrated logistics support program or may be impacted by integrated logistics support program, including environmental and sustainability issues
- liaising with stakeholders to harness information and opportunities that may impact on integrated logistics support program
- preparing and presenting reports that may be complex and written, to inform and/or to succinctly present an argument to enable results to be achieved
- providing and receiving feedback in a positive manner.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- analysis process
- duty of care
- information sources
- integrated logistics support
- level of written communication required to prepare letters and reports
- materiel logistics (materiel sustainment and integrated logistic support)
- organisational guidelines and standards
- organisational policy and procedures
- own role in relation to wider organisational or project context
- product knowledge related to systems and/or equipment in service in the organisation
- professional codes of practice
- research techniques
- verbal communication techniques.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- computer and relevant software
- legislation, guidelines, procedures and protocols relating to integrated logistic support
- specialist integrated logistics support plans.

# TLIX5012 Develop and review materiel sustainment plans

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to develop and review materiel sustainment plans and associated subordinate plans to ensure efficient and effective delivery of materiel sustainment across the materiel and materiel system life cycle.

This unit was developed for materiel sustainment specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the      Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

### **1 Identify materiel sustainment requirements**

- 1.1 Materiel sustainment planning requirements are identified in accordance with organisational policy and procedures
- 1.2 Sources of information relevant to materiel sustainment are identified and relevant information is accessed in accordance with organisational policy and procedures
- 1.3 Standards and legislation applicable to materiel sustainment are identified and accessed
- 1.4 Specific materiel sustainment requirements are assessed against available information
- 1.5 Costing analysis of requirements is coordinated in accordance with organisational policy and procedures

### **2 Prepare materiel sustainment plans**

- 2.1 Organisational policy and procedures relevant to materiel sustainment requirements are identified and interpreted
- 2.2 Stakeholder consultation is conducted in accordance with relevant organisational policy and procedures
- 2.3 Materiel sustainment plans are developed in accordance with legislative requirements, and organisational policy and procedures
- 2.4 Materiel sustainment plans are promulgated in accordance with organisational policy and procedures

### **3 Review materiel sustainment plans**

- 3.1 Materiel sustainment plans are reviewed in accordance with relevant organisational policy and procedures
- 3.2 Required changes to materiel sustainment plans are identified and prepared in accordance with relevant organisational policy and procedures
- 3.3 Amendments to materiel sustainment plans are prepared and promulgated to relevant stakeholders or personnel in accordance with relevant organisational policy and procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX5012A Develop and review materiel sustainment plans.

# Assessment Requirements for TLIX5012 Develop and review materiel sustainment plans

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- adjusting plans as necessary to ensure effective and efficient performance
- analysing materiel sustainment requirements
- applying materiel sustainment and project management knowledge when developing a plan
- consulting and negotiating with internal and external stakeholders and resolving potential areas of conflict or concern to ensure overall objectives are achieved
- displaying insight into how industry operates and drivers that influence industry dealings
- displaying resilience by continuing to move forward despite criticism or setbacks
- drawing on information from a variety of sources using research, analysis and judgement to determine where internal and external factors impact on materiel sustainment requirements, and adjusting planning accordingly
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- initiating and efficiently monitor processes
- initiating remedial action required
- undertaking performance measurement to enable objectives to be measured against defined parameters
- using appropriate information technology and software
- using organisational strategic objectives to identify long-term factors and external considerations for materiel sustainment planning.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- codification and cataloguing processes
- configuration management
- contract management
- costing analysis, which may include life cycle costing
- industrial base capability
- legislative and regulatory environment as it pertains to materiel logistics
- logistics governance
- logistics support analysis principles and processes
- materiel sustainment
- organisational policy and procedures
- organisational role relevant to materiel sustainment
- performance measurement
- planning processes
- procurement
- product knowledge related to systems and/or equipment in service in the organisation
- safety, legislative and statutory requirements including relevant environmental and sustainability issues
- supply chain
- technical regulatory framework.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIX5013 Develop materiel sustainment processes and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to develop organisational materiel sustainment processes and procedures.

It includes anticipating and confirming the need for development, the development processes, gathering and analysing information, determining direction, and drafting, releasing and promoting the process. It includes the initial development of procedures integral to the processes.

This unit was developed for materiel sustainment specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Analyse materiel sustainment environment**

- 1.1 Operation of materiel sustainment environment is analysed, and key factors and issues are identified
- 1.2 External and internal factors likely to impact on materiel sustainment needs and capabilities are continually monitored and analysed
- 1.3 Stakeholders are identified and consulted on materiel and materiel systems needs and capabilities, in accordance with organisational policy and procedures
- 1.4 Legislation and organisational policy and procedures that may impact on materiel sustainment activity are identified and analysed

### **2 Develop materiel sustainment processes and procedures**

- 2.1 Consultation and negotiation with stakeholders is conducted in accordance with organisational policy and procedures
- 2.2 Materiel sustainment processes for materiel and materiel systems are developed and documented in accordance with organisational policy and procedures
- 2.3 Costing analysis of options is undertaken and documented in accordance with organisational policy and procedures
- 2.4 Procedures required to support material sustainment processes are identified, developed and documented
- 2.5 Processes and procedures are approved in accordance with organisational policy and procedures

### **3 Communicate materiel sustainment processes and procedures**

- 3.1 Stakeholders are fully informed of outcomes in accordance with organisational policy and procedures
- 3.2 Materiel sustainment processes and procedures are promulgated in accordance with organisational policy and procedures
- 3.3 Materiel sustainment processes and procedures are reviewed in accordance with organisational policy and

procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIX5013 Develop materiel sustainment processes and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- analysing materiel sustainment environment
- applying materiel sustainment and project management knowledge when developing processes and procedures
- consulting and negotiating with internal and external stakeholders and resolving potential areas of conflict or concern to ensure overall objectives are achieved
- developing processes and procedures that can be readily understood by those responsible for action
- displaying resilience by continuing to move forward despite criticism or setbacks; remaining positive and responding to pressure in a controlled manner
- identifying requirements for processes and procedures, and adjusting them as necessary to ensure effective and efficient performance of processes
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- initiating and efficiently monitoring processes
- initiating remedial action required
- undertaking performance measurement to enable objectives to be measured against defined parameters
- undertaking research and analysis to determine internal and external factors that impact on materiel sustainment program, and incorporating into processes and procedures accordingly
- using appropriate information technology and software
- using organisational strategic objectives to identify long-term factors and external considerations for developing materiel processes and procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- codification and cataloguing processes
- contract management to develop materiel sustainment
- logistics support analysis principles and processes
- management processes to develop materiel sustainment
- materiel sustainment process and procedures
- organisational policy and procedures
- organisational role relevant to materiel sustainment
- performance measurement as it relates to materiel sustainment
- product knowledge related to systems and/or equipment in service in the organisation
- safety, legislative and statutory requirements, including environmental and sustainability issues.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- computer and relevant software
- legislation, guidelines, procedures and protocols relating to materiel sustainment
- material sustainment plans.

# TLIX5014 Manage materiel sustainment operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to prepare for materiel sustainment operations, to manage those operations throughout the materiel life cycle and to report on those operations in the organisational environment.

This unit was developed for materiel sustainment specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Identify materiel sustainment management requirements**
  - 1.1 Sources of information relevant to materiel sustainment are identified and relevant information is obtained in accordance with organisational policy and procedures
  - 1.2 Currency of information is reviewed and documented in accordance with organisational policy and procedures
  - 1.3 Materiel sustainment management requirements are defined and documented in accordance with organisational policy and procedures
- 2 Develop materiel sustainment management operations**
  - 2.1 Consultation with stakeholders is conducted in accordance with organisational policy and procedures
  - 2.2 Materiel sustainment operations are developed and recorded taking into account materiel and/or materiel system, in accordance with organisational policy and procedures
  - 2.3 Key performance indicators are developed and documented in accordance with organisational policy and procedures
  - 2.4 Costing analysis processes are developed and documented in accordance with organisational policy and procedures
- 3 Apply materiel sustainment management operations**
  - 3.1 Materiel sustainment risks and impacts are identified, recorded and managed
  - 3.2 Materiel sustainment procedures are applied in accordance with legislative requirements
  - 3.3 Management operations are carried out in accordance with organisational policy and procedures
  - 3.4 Failures and variances are documented, reported and managed in accordance with organisational policy and procedures
  - 3.5 Participation and contribution to materiel sustainment activities are established and maintained
- 4 Review materiel sustainment operations**
  - 4.1 Performance systems and processes are monitored and analysed to assess progress in achieving plans and targets
  - 4.2 Systems, procedures and records associated with documenting performance are managed in accordance with organisational requirements

- 4.3 Materiel sustainment operations are reviewed in accordance with organisational policy and procedures
- 4.4 Changes required are identified and prepared in accordance with organisational policy and procedures
- 4.5 Amendments to materiel sustainment operations are incorporated into plans and promulgated to relevant stakeholders, in accordance with organisational policy and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX5014A Manage materiel sustainment operations.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIX5014 Manage materiel sustainment operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- applying materiel sustainment and project management knowledge to relevant materiel sustainment operations
- consulting and negotiating with internal and external stakeholders and resolving potential areas of conflict or concern to ensure overall objectives are achieved
- displaying resilience by continuing to move forward despite criticism or setbacks
- identifying and establishing materiel sustainment operation processes
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- identifying, acquiring and adjusting resources as necessary to ensure effective and efficient performance of the processes
- initiating and efficiently monitoring processes
- initiating remedial action required
- managing obsolescence by ensuring implications of obsolescence are taken into consideration, and determining and implementing an obsolescence management strategy in accordance with policy and procedures
- managing procurement activities occurring in the materiel sustainment environment
- undertaking performance measurement to enable objectives to be measured against defined parameters
- undertaking research and analysis to investigate internal and external factors that impact on materiel sustainment program
- using appropriate information technology and software
- using organisational strategic objectives to identify long-term factors and external considerations for managing materiel sustainment operations.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- codification and cataloguing processes
- industrial base capability
- legislative and regulatory environment as it pertains to materiel logistics, including environmental, sustainability issues
- logistics governance
- logistics support analysis principles and processes
- management processes
- materiel sustainment
- organisational policy and procedures
- organisational role relevant to materiel sustainment
- performance measurement
- product knowledge related to systems and/or equipment in service in the organisation
- safety, legislative and statutory requirements, including relevant environmental and sustainability issues.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIX5015 Establish supply chains

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to establish and develop a strategy and model for supply chain management in accordance with relevant organisational policy and procedures.

Establishing and developing supply chains in the materiel system are integral supports to the stated capability requirement.

This unit was developed for materiel logisticians working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Determine supply chain requirements**

- 1.1 Supply chain components are identified and their links and inter-relationships are analysed in accordance with organisational policy and procedures
- 1.2 Communication, data access, information sharing and technology requirements for an integrated supply chain are determined
- 1.3 Requirements for collaborative planning, forecasting and tailored supply chains are identified
- 1.4 Supply chain requirements are documented in accordance with organisational policy and procedures

### **2 Determine supply chain management strategy**

- 2.1 Outsourcing, choice of suppliers and partners, reshaping contractual relationships and the performance of the entire supply chain rather than individual supply chain segments are covered by strategies
- 2.2 Matching supplier capability to customer requirements including strategies to optimise electronic information sharing and inventory risk management, and to minimise environmental impacts is included in strategies
- 2.3 Strategies to build effective customer supplier relationships are identified
- 2.4 Customer satisfaction requirements across the supply chain continuum are included in performance management strategies
- 2.5 Strategic alliances, electronic business and electronic data interchange are included in supply chain management strategies
- 2.6 Legal, ethical, environmental and security issues relating to supply chain management are addressed in supply chain management strategies
- 2.7 Integration of supply chain processes into existing business processes is included in strategy

### **3 Develop supply chain management**

- 3.1 Supply chain management options are researched, and strengths and weaknesses of each option are identified

**model**

- 3.2 Supply chain management models are investigated and their requirements are analysed and compared with supply chain capability and culture
- 3.3 Model for supply chain management is developed that meets organisational needs including information flow, collaborative planning and forecasting, in accordance with the organisation's supply chain management strategy
- 3.4 Supply chain management model is developed to support reduced inventory footprints, operating costs, faster cycle times and greater customer satisfaction rates

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

**Unit Mapping Information**

This unit replaces and is equivalent to TLIX5015A Establish supply chains.

**Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIX5015 Establish supply chains

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- analysing and evaluating information, and determining how it may be impacted by the supply chain or how the supply chain might be impacted by the information being considered
- analysing supply chain requirements
- applying logistics and project management knowledge when establishing supply chains
- communicating with stakeholders
- consulting and negotiating with internal and external stakeholders and resolving potential areas of conflict or concern to ensure overall objectives are achieved
- displaying resilience by continuing to move forward despite criticism or setbacks
- identifying relevant information from integrated logistics support program and materiel sustainment program that is relevant to establishing supply chains
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- identifying requirements for plans and adjusting them as necessary to ensure effective and efficient performance
- initiating and efficiently monitoring processes
- initiating remedial action required
- preparing and providing relevant reports and documentation
- sourcing information on best practice approaches adopted in public and private sectors, showing insight into how industry operates and business drivers that influence industry with their dealings
- undertaking performance measurement to enable objectives to be measured against defined parameters
- using organisational strategic objectives to identify long-term factors and external considerations for establishing a supply chain.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- codification and cataloguing processes
- industrial base capability
- integrated logistics support
- international agreements
- interoperability
- legislative and regulatory environment, including relevant environmental and sustainability issues
- logistics governance
- logistics support analysis principles and processes
- materiel sustainment
- organisational policy and procedures
- organisational role relevant to supply chains
- performance measurement
- planning processes
- product knowledge related to systems and/or equipment in service in the organisation
- safety, legislative and statutory requirements, including relevant environmental and sustainability issues
- supply chain concepts.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment

currently used in industry

- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- computer and relevant software
- legislation, guidelines, procedures and protocols relating to materiel logistics
- supply chain plans.

## **TLIX5019 Provide specialist materiel sustainment advice**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to provide specialist advice related to materiel sustainment in accordance with relevant organisational policy and procedures.

It includes identifying issues, providing advice, formulating options and selecting preferred option/s to address identified issues.

This unit of competency specifically addresses advice that is relevant to materiel sustainment activity; it is not intended to cover technical advice that is provided in a broader context of the organisational endeavour or a professional discipline.

This unit was developed for materiel sustainment specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### **Pre-requisite Unit**

Not applicable.

### **Competency Field**

X – Logistics

### **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

- |  |  |
|--|--|
| <b>1 Identify and analyse issue/s</b>                      | <p>1.1 Circumstances that require providing advice relating to materiel sustainment are observed, received and clarified</p> <p>1.2 Issue/s are identified and confirmed, as required, through consultation with relevant personnel</p> <p>1.3 Circumstances are analysed and issue/s are interpreted and clearly defined</p> <p>1.4 Research related to issue/s is conducted and advice of relevant personnel is sought to clarify unclear findings</p> |
| <b>2 Formulate options for materiel sustainment advice</b> | <p>2.1 Options related to providing advice are identified and evaluated</p> <p>2.2 Options are prioritised and preferred option/s is chosen</p>  |
| <b>3 Provide specialist materiel sustainment advice</b>    | <p>3.1 Advice is formulated and discussed with stakeholders</p> <p>3.2 Stakeholder requirements are negotiated, documented and incorporated in proposed advice</p> <p>3.3 Concluding advice is provided in accordance with ethical and practical guidelines and in specified resource constraints</p>  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX5019A Provide specialist materiel sustainment advice.

# Assessment Requirements for TLIX5019 Provide specialist materiel sustainment advice

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- approaching negotiations with a clear understanding of key issues and persuasively negotiating to ensure materiel sustainment considerations are addressed
- communicating materiel sustainment information clearly
- displaying insight into how industry operates and drivers that influence industry dealings
- displaying resilience by continuing to move forward despite criticism or setbacks
- focusing on communicating materiel sustainment advice clearly, presenting information confidently and selecting appropriate medium for communication to influence a range of audiences
- focusing on gaining a clear understanding of others' comments by listening and adapting to audience to ensure materiel sustainment considerations are addressed
- identifying, reviewing and analysing information that may impact on the materiel sustainment program or may be impacted by the materiel sustainment program, including environmental and sustainability issues
- liaising with stakeholders to harness information and opportunities that may impact on materiel sustainment program
- preparing and presenting reports that may be complex, to inform and/or to succinctly present an argument to enable results to be achieved
- providing and receiving feedback in a constructive manner.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- analysis process to provide specialist materiel sustainment
- duty of care as it applies to materiel sustainment
- information sources for providing materiel sustainment
- level of written communication required to prepare letters and reports
- materiel logistics (materiel sustainment and integrated logistics support)
- organisational guidelines and standards
- organisational policy and procedures
- own role in relation to wider organisational or project context
- product knowledge related to systems and/or equipment in service in the organisation
- professional codes of practice
- research techniques for providing materiel sustainment
- specialist materiel sustainment
- verbal communication techniques for providing materiel sustainment.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# TLIX5020 Develop and review configuration management plans

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to develop and review configuration management plans and associated subordinate plans, to ensure efficient and effective delivery of configuration management across the materiel and materiel system life cycle.

This unit was developed for configuration management specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

demonstrate achievement of the element.

**1 Identify and analyse configuration management requirements**

1.1 Configuration management planning requirements are identified in accordance with organisational policy and procedures

1.2 Sources of information relevant to configuration management are identified and accessed in accordance with organisational policy and procedures

1.3 Standards and legislation applicable to configuration management are identified and accessed

1.4 Analysis of configuration management resource requirements is conducted in accordance with organisational policy and procedures

**2 Prepare configuration management plans**

2.1 Stakeholder consultation is conducted in accordance with relevant organisational policy and procedures

2.2 Organisational policy and procedures relevant to configuration management requirements are identified and interpreted

2.3 Configuration management plans are developed in accordance with legislative requirements and organisational policy and procedures

2.4 Configuration management plans are promulgated in accordance with organisational policy and procedures

**3 Review configuration management plans**

3.1 Configuration management plans are evaluated in accordance with relevant organisational policy and procedures

3.2 Required changes to configuration management plans are identified and prepared in accordance with relevant organisational policy and procedures

3.3 Amendments to configuration management plans are prepared and promulgated to relevant stakeholders or personnel in accordance with relevant organisational policy and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

# Assessment Requirements for TLIX5020 Develop and review configuration management plans

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- applying configuration management and project management knowledge relevant to planning
- consulting and negotiating effectively with internal and external stakeholders and resolving potential areas of conflict or concern to ensure overall configuration management planning objectives are achieved
- displaying resilience by continuing to move forward despite criticism or setbacks
- drawing on information from a variety of sources using research, analysis and judgement to identify and develop configuration management plans
- identifying relationships between organisational goals and recognising how own work contributes to achieving these goals
- identifying requirements for plans and adjusting them as necessary to ensure effective and efficient performance
- identifying, reviewing and analysing information that may impact on configuration management planning or may be impacted by configuration management planning
- initiating and efficiently monitoring processes
- initiating remedial action required
- undertaking performance measurement relevant to configuration management planning to enable objectives to be measured against defined parameters
- using appropriate information technology and software
- using organisational strategic objectives to identify and assess potential alliances and effective strategies.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- codification and cataloguing processes
- configuration management
- legislative and regulatory environment as it relates to materiel logistics
- logistics governance
- materiel logistics
- organisational policy and procedures
- organisational role relevant to configuration management
- planning processes
- product knowledge related to systems and/or equipment in service in the organisation
- safety, legislative and statutory requirements relevant to configuration management.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations*, current at the time of assessment.

## **TLIX5021 Manage configuration management processes**

### **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### **Application**

This unit involves the skills and knowledge required to prepare for configuration management processes, to manage those processes throughout the materiel life cycle and to report on those processes in the organisational environment.

This unit was developed for configuration management specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements describe the                      Performance criteria describe the performance needed to

essential outcomes.

demonstrate achievement of the element.

**1 Identify configuration management requirements**

- 1.1 Sources of information relevant to configuration management are identified and obtained in accordance with organisational policy and procedures
- 1.2 Currency of information is reviewed and documented in accordance with organisational policy and procedures
- 1.3 Configuration management requirements are defined and documented in accordance with organisational policy and procedures

**2 Develop configuration management processes**

- 2.1 Consultation with stakeholders is conducted in accordance with organisational policy and procedures
- 2.2 Configuration management processes are developed and recorded in accordance with organisational policy and procedures
- 2.3 Key performance indicators are developed and documented in accordance with organisational policy and procedures
- 2.4 Analysis of configuration management processes is developed and documented in accordance with organisational policy and procedures

**3 Apply configuration management processes**

- 3.1 Configuration management risks and impacts are identified, recorded and managed
- 3.2 Configuration management procedures are applied in accordance with legislative requirements
- 3.3 Configuration management processes are carried out in accordance with organisational policy and procedures
- 3.4 Failures and variances are documented, reported and managed in accordance with organisational policy and procedures
- 3.5 Participation and contribution to configuration management processes are established and maintained

**4 Review configuration management processes**

- 4.1 Performance systems and processes are monitored and analysed to assess progress
- 4.2 Systems, procedures and records associated with documenting performance are managed in accordance with organisational requirements

- 4.3 Configuration management processes are reviewed in accordance with organisational policy and procedures
- 4.4 Changes required are identified and prepared in accordance with organisational policy and procedures
- 4.5 Amendments to configuration management processes are incorporated into plans and promulgated to relevant stakeholders in accordance with organisational policy and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# TLIX5025 Provide specialist configuration management advice

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to provide specialist advice related to configuration management in accordance with relevant organisational policy and procedures.

It includes identifying issues, providing advice, formulating options and selecting preferred option/s to address identified issues.

This unit of competency specifically addresses advice relevant to configuration management activity; it is not intended to cover technical advice provided in a broader context of the organisational endeavour or a professional discipline.

This unit was developed for configuration management specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

# **TLIX5036 Manage and monitor technical data and information systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to manage and monitor technical data and information systems in accordance with relevant organisational policy and procedures.

It includes designating detailed technical data, information use and maintenance responsibilities; developing key performance indicators for technical data management activities; and developing monitoring methodology.

It also includes monitoring technical data management systems; identifying and responding to problems and changes; and designating technical data and information creation and capturing responsibilities.

This competency occurs within an established systems framework. It may also be used to review systems processes and activities.

This unit applies to technical regulatory framework specialists working within materiel logistics but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their output.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Designate detailed technical data and information use, and maintenance responsibilities**

- 1.1 Responsibilities for technical data and information use and maintenance activities are designated to staff in accordance with approved systems framework, organisational policy and the competency of individual staff
- 1.2 System operational rules are devised in compliance with approved systems framework
- 1.3 Resources for approved budget period are allocated in accordance with policy and strategic plan

#### **2 Develop key performance indicators for technical data management activities**

- 2.1 Measurable performance indicators are developed for technical data management activities in accordance with authorised systems
- 2.2 Individual personnel/organisational unit data management responsibilities are identified and documented
- 2.3 Acceptable range of variation for compliance is determined based on data management responsibilities, applicable data management systems and organisational risk management analysis

#### **3 Develop monitoring methodology**

- 3.1 Methodology for monitoring technical data management systems rules, standards and procedures is developed based on authorised systems
- 3.2 Timeframes involved, means of surveillance and forms of reporting are included in methodology developed
- 3.3 Methodology, performance criteria and range of variation from standards and rules are submitted to appropriate authority for approval

#### **4 Monitor a technical data management system**

- 4.1 Monitoring is undertaken in accordance with approved timeframes and frequency

4.2 Staff being monitored are notified in accordance with organisational policy and guidelines

4.3 Variation from data management systems framework, rule, standards and procedures that exceed the agreed limit is noted and details of the situation are recorded

4.4 Reports relating to technical data and information use and maintenance are provided to appropriate authority in the required format and at the required intervals

## **5 Identify and respond to problems and changes**

5.1 Problems and changes requiring a systematic response are identified from monitoring reports and external events

5.2 Recommendations are made for revisions to systems, procedures, and strategic plans in response to identified variations, changes and problems

5.3 Amendments to systems are devised and implementation is planned, in response to problems and changes that require a systemic response

5.4 Recommendations for systems amendments and the planning and implementation required are prepared, and approval is sought from appropriate authority

5.5 Procedures for using technical data and information systems, and subsequent alterations and amendments to the procedures are authorised, ensuring that performance indicator parameters and access rules are adhered to

## **6 Designate technical data and information creation and capture responsibilities**

6.1 Responsibilities for technical data and information creation and capture activities are designated to staff in accordance with organisational policy

6.2 Technical data and information creation and capture performance targets are set within the parameters of the technical data management plan

6.3 Resources for the budget period are allocated in accordance with organisational policy and strategic plan

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX5036A Manage and monitor technical data and information systems.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIX5036 Manage and monitor technical data and information systems

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing data and information
- applying knowledge of technical data and information plans to assist work and to guide problem solving
- applying relevant implementation processes
- applying technical data and information, and project management knowledge to technical data and information systems
- consulting and negotiating effectively with internal and external key stakeholders and resolving potential areas of conflict or concern to ensure overall technical data and information systems objectives are achieved
- displaying resilience by continuing to move forward despite criticism or setbacks
- identifying the relationship between organisational goals and recognising how own work contributes to achieving these goals
- implementing processes to enable new technical data and information systems requirements to be effectively transitioned across the life cycle – including integrated logistics support considerations, environmental, sustainability issues, and validation and verification activities
- monitoring and reporting on implementation processes
- monitoring processes to ensure technical data and information systems continue to enable operational requirements to be attained – this may include performance metrics.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- data management, standards, principles, processes and functional requirements
- details of the technical regulatory framework, organisational engineering management plans and technical data management plan
- established communication channels and protocols
- organisational data management systems
- organisational functions, structure and culture
- organisational policy, strategies and procedures
- organisational rules for capturing, accessing, using and maintaining technical data and information
- organisational technical classification scheme and language
- own role in relation to wider organisational or project context
- problem identification and resolution
- procedures for recording, reporting and maintaining workplace records and information
- quality assurance principles and processes
- technical expertise required for the job/function
- workflow and business process re-engineering principles and practices.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment, computer and software and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

# TLIX5037 Plan logistics support for deployed operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to plan logistics support for deployed elements of an organisation in support of organisational operations in accordance with relevant organisational policy and procedures.

This unit of competency is applicable to logistics personnel who have a responsibility to organise the delivery of logistics support in a deployed context. This person will typically plan logistics support for relatively simple operations. This type of operation would enable planning to be completed by an individual as opposed to a significant operation where planning is usually completed by a team of professionals and operational control is at the highest level of the organisation.

This role requires management and leadership skills.

Logistics support may be comprised of a range of capabilities from different disciplines including road transport, supply, maintenance, catering or health.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Analyse logistics requirement**

1.1 Operational requirement is analysed to establish scope and intent of logistics support

1.2 Operating environment is identified and information is sought to establish operational operating and logistics factors

1.3 Limitations and constraints are determined to establish feasible and realistic courses of actions

1.4 Critical facts and assumptions are made to allow planning to progress in the absence of developed knowledge of the current situation

### **2 Analyse risks to logistics support**

2.1 Risk analysis is conducted to identify and mitigate against unacceptable risks in accordance with organisational policy and procedures

2.2 Liaison with agencies involved in operational logistics is undertaken to ensure most effective coordination of effort

2.3 Local population and organisations in operating area are analysed to identify possible disruption to logistics support

### **3 Develop logistics plan**

3.1 Logistics situation is reviewed to inform planning

3.2 Planning timeline is prepared to guide planning activities and to ensure sufficient time is allowed to disseminate information and subsequent preparation of personnel and equipment

3.3 Logistics concept is created, based on analysis and principles of logistics, operational suitability, feasibility and acceptance by management

3.4 Logistics plan is developed in accordance with organisational policy and procedures

3.5 Logistics plan is adjusted in accordance with changing operational need

3.6 Contingency plans are developed

3.7 Logistics plan is communicated to stakeholders

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX5037A Plan logistic support for deployed operations.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIX5037 Plan logistics support for deployed operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing and validating numerical information accurately
- analysing task complexities such as limitations, freedoms, vulnerabilities, environmental considerations and time limitations
- applying a broad range of problem-solving strategies to planning outcomes
- applying relevant organisational policy and procedures
- applying planning process in response to a logistics support task in a deployed setting
- communicating effectively verbally and in writing
- interpreting instructions and applying to actions and tasks
- interpreting policies and procedures
- making decisive, informed decisions that align with organisational requirements
- managing own planning tasks in accordance with organisational requirements
- moving forward despite planning task difficulty
- preparing and issuing instructions that clearly communicate intent and operational tasks
- undertaking analysis to determine where internal and external factors impact on logistics support requirements and adjusting plans accordingly
- using appropriate information technology and software

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- environment consideration in planning logistics support
- logistics concepts
- organisation, its function and logistics capabilities
- organisational policy and procedures pertaining to logistics

- organisational role relevant to specialist logistics support
- organisational writing conventions
- planning process
- risks to logistics support
- specialist understanding of customer and stakeholder requirements.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# **TLIX5038 Organise the deployment and delivery of logistics support**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to organise the deployment and delivery of logistics support in a deployed context in support of organisational operations in accordance with relevant organisational policy and procedures.

The application of this unit in the workplace includes preparing for logistics operations, deploying logistics elements and managing the internal operation of a specialist logistics element.

This unit is applicable to logistics personnel responsible for organising and managing logistics support in a deployment context.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

X – Logistics

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Prepare for logistics operations**

- 1.1 Operational requirement is analysed to establish scope and intent of logistics support
- 1.2 Deployment requirements are received and interpreted to determine logistic requirements
- 1.3 Reconnaissance of deployment area is conducted to inform planning including technical and functional siting considerations
- 1.4 Warning instructions are prepared and issued to logistics element personnel to enable them to prepare for deployment
- 1.5 Work health and safety (WHS)/occupational health and safety (OHS) requirements and recognised safety precautions are applied throughout the operation in accordance with organisational policy and procedures

### **2 Deploy logistics support**

- 2.1 Deployment instructions are prepared and issued to logistics element personnel to inform them of deployment method and sequence
- 2.2 Movement to deployment site is managed in accordance with operational environment and management instructions
- 2.3 Logistics element is deployed, sited and monitored to ensure operational logistics support requirements are being achieved

### **3 Provide logistics support**

- 3.1 Liaison with stakeholders involved in the operation is carried out to ensure most effective coordination of effort
- 3.2 Operational or organisational constraints are recognised and logistics tasks are directed to align with these constraints
- 3.3 Logistics support priorities are set to align activities with organisational objectives
- 3.4 Activity is monitored to ensure logistics elements are conducting activity with appropriate authority and in accordance with organisational policy and procedures
- 3.5 Logistics support delivery is managed to meet operational demands
- 3.6 Personnel are supervised and efficiently and effectively employed

within their area of speciality

- 3.7 Maintenance integrity of logistics support assets is monitored to ensure assets are available for support tasks when required
  - 3.8 Logistics information systems are utilised to monitor and coordinate logistics support operations and to inform decision making process
  - 3.9 Liaison with agencies involved in the operation is carried out to ensure most effective coordination of effort
  - 3.10 Management and stakeholders are advised when significant issues or developments arise that may adversely impact on operation
  - 3.11 Records are maintained and entered into information systems
- 4 Close down site**
- 4.1 Redeployment instructions are prepared and issued to logistics element personnel
  - 4.2 Scaling down and withdrawal of deployment site is monitored to ensure it is consistent with operational environment and organisational requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX5038A Organise the deployment and delivery of logistics support.

## Links

Companion Volume implementation guides are found in VETNet -

# TLIX5039 Plan and conduct road convoy

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to plan and coordinate road convoy movement in accordance with relevant organisational policy and procedures.

The application of this unit in the workplace includes receiving instructions to undertake road convoy movement, planning all aspects of the movement, and coordinating vehicle movement and personnel, in accordance with operating environment plan and requirements.

This role requires management and leadership skills.

Road convoy movement may be conducted across any terrain comprised of vehicles integral to logistics capabilities from different disciplines including road transport, supply, maintenance, catering or health.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Plan convoy movement**

- 1.1 Road convoy movement instructions to are received and interpreted
- 1.2 Route reconnaissance is conducted to inform planning
- 1.3 Replenishment and staging requirements are identified
- 1.4 Logistics information systems are utilised to monitor and coordinate operation and to inform decision making process
- 1.5 Operational or organisational constraints are recognised and tasks are planned to align with these constraints
- 1.6 Plan for the road convoy movement is developed and distributed
- 1.7 Work health and safety (WHS)/occupational health and safety (OHS) requirements and recognised safety precautions are applied throughout the operation in accordance with standard procedures

### **2 Lead convoy movement**

- 2.1 Deployment instructions are prepared and issued to personnel to inform them of road convoy method and sequence
- 2.2 Vehicle discipline is enforced to ensure all vehicle speed, movement and behaviour is in accordance with convoy plan and organisational policy and procedure
- 2.3 Halts are coordinated during convoy movement in accordance with convoy plan and organisational policy and procedure
- 2.4 Replenishment and staging is undertaken in accordance with convoy plan
- 2.5 Convoy protection is ensured during operation as required
- 2.6 Fatigue management strategies are applied to ensure vehicles are operated by rested and alert drivers
- 2.7 Liaison with agencies involved in operation is carried out to ensure most effective coordination of effort
- 2.8 Management and stakeholders are advised when significant issues or developments arise that may adversely impact on operation

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX5039A Plan and conduct road convoy.

- analysing and validating numerical information accurately
- analysing task complexities such as limitations, freedoms, vulnerabilities, time limitations
- applying a broad range of problem-solving strategies
- applying planning process to produce suitable road movement plans
- drafting and releasing complex forms of written communication
- interpreting instructions and applying to actions and tasks
- interpreting policies and procedures
- managing own planning tasks in accordance with organisational requirements
- navigating a vehicle
- supervising a team
- using appropriate information technology and software.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- dangerous cargo
- environmental considerations for planning transport
- fatigue management strategies for planning and conducting road convoy
- fuel usage and vehicle distance planning
- organisation, its function and logistics support capabilities
- organisational policy and procedures relevant to road transport and convoy operations
- organisational writing conventions
- planning process for planning and conducting road convoy

- regulatory standards and requirements for road transport
- road traffic rules
- vehicle and transport equipment capabilities and limitations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

## TLIX5040 Manage contracted support services

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to manage contracted support services in support of organisational operations, in accordance with relevant workplace policies and procedures.

It includes determining the scope of contracted support provided, integrating contracted support into organisational operations, and supervising the delivery of and reporting on, contracted support performance.

The unit applies to people with responsibility for managing contracted services in a deployed context. However, this unit can apply to anyone managing/administering contract services. This unit does not include establishing the contractual arrangements.

This person will bring management skills and leadership to perform the scope of this unit of competency. Contracted support may be comprised of a range of capabilities from different disciplines such as road transport, supply, maintenance, catering or health. These services are usually procured to supplement organisational capability to fill organisational capability gaps.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

X – Logistics

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

#### PERFORMANCE CRITERIA

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
<b>1 Determine the scope of contracted support</b>	<ul style="list-style-type: none"><li>1.1 Contract service arrangements are confirmed and clarified as required</li><li>1.2 Contract obligations are identified in accordance with contractual and organisational requirements</li><li>1.3 Contract authority is consulted to clarify and assist with contract administration issues</li><li>1.4 Contract service arrangement risks are assessed and responded to in accordance with contract requirements, and organisational policy and procedures</li><li>1.5 Contract supervision strategy is developed and documented to establish the environment for contractor integration and production in the workplace</li></ul>
<b>2 Integrate contracted support with own operations</b>	<ul style="list-style-type: none"><li>2.1 Arrangements for interaction and production between contracted personnel and organisational personnel are established</li><li>2.2 Opportunities to communicate between contracted personnel and organisational personnel are established to promote an open and productive environment</li><li>2.3 Concerns expressed by workplace and contracted personnel are responded to quickly to resolve issues and to provide an equitable workplace</li><li>2.4 Unity and cohesion are promoted to enable the integration between contracted personnel and organisational personnel</li></ul>
<b>3 Supervise the delivery of contracted support</b>	<ul style="list-style-type: none"><li>3.1 Workplace obligations to the contractor are monitored in accordance with the contract requirements and organisational policy and procedures</li><li>3.2 Contractor performance is monitored against service arrangements to ensure all agreement obligations are being met</li><li>3.3 Notices of contract variations are reviewed and integrated into current workplace arrangements in accordance with the contract, and organisational policy and procedures</li><li>3.4 Complaints are responded to in a manner that resolves simple issues early and close to the source of the problem</li></ul>

- 3.5 Effective communication strategies and processes are established and implemented to assist ongoing communication between contracted personnel and organisational personnel
- 4 Report on the performance of contracted support**
- 4.1 Communication on the performance of the contract is maintained with the contract authority in accordance with contractual requirements, and organisational policy and procedures
- 4.2 Performance reporting is carried out in accordance with contractual requirements, and organisational policy and procedures
- 4.3 Contract information is maintained in accordance with organisational policy and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX5040A Manage contracted support services.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIX5040 Manage contracted support services

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing and validating information accurately
- analysing task complexities such as limitations, vulnerabilities and time limitations
- applying a broad range of problem-solving strategies
- assessing risk posed to the successful implementation of contract support services
- communicating and negotiating with contractors and other stakeholders
- developing a contract supervision strategy for contract support being augmented with own organisation in a field deployment context
- drafting and releasing complex forms of written communication
- interpreting and applying complex documents such as contracts, legislation and guidelines
- interpreting policies and procedures
- making decisive, informed decisions that align with organisational requirements
- moving forward despite the difficulty of the task
- networking with a diverse range of service providers, contractors and end users
- planning and organising own tasks in accordance with organisational requirements
- providing accurate and balanced reporting on contract performance
- responding to contract variations and demonstrating how these affect the contract supervision strategy
- using appropriate information technology and software.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- commonwealth/state/territory government legislation, policies, practices and guidelines relating to contract administration, including environmental, purchasing guidance, logistics support concepts, and work health and safety (WHS)/occupational health and safety (OHS)
- contract management
- contract performance management
- equal employment opportunity, equity and diversity principles
- negotiation
- organisational writing conventions
- organisation, function and logistics support capabilities
- planning processes
- privacy and confidentiality requirements
- probity principles and issues
- procurement
- risk management.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

# TLIX5041 Organise supply support on deployment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to organise supply support operations in a deployed context in support of operations, in accordance with relevant organisational policy and procedures.

The application of this unit in the workplace includes planning supply support and managing delivery of supply support services. This involves overseeing local procurement, inventory control, warehousing and the return, salvage and disposal of supplies to meet specific operational requirements.

This unit is applicable to logistics personnel responsible for organising and managing delivery of supply support in a deployment context.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to demonstrate

essential outcomes.	achievement of the element.
<b>1 Manage procurement</b>	<ul style="list-style-type: none"><li>1.1 Local procurement is utilised to contribute to organisational sustainment</li><li>1.2 Deployment input to central procurement is provided to contribute to organisational sustainment</li><li>1.3 Governance requirements relating to procurement are maintained in accordance with organisational policy and procedure</li></ul>
<b>2 Control inventory of supplies</b>	<ul style="list-style-type: none"><li>2.1 Accounting for stocks is monitored including stocktaking and earmarking stock for specific purposes</li><li>2.2 Logistics information management systems are used to control inventory and to support organisational decision making</li><li>2.3 Positioning and distributing stock in the supply chain are supervised to accommodate stockholding plans and forecast usage</li><li>2.4 Processing stock demands is monitored to ensure stocks are made available for distribution to locations in line with customer needs</li><li>2.5 Arrangements for distributing and delivering stock are monitored to ensure smooth transition between supply and distribution</li><li>2.6 Stock replenishment in quantities and timeframes determined by usage and provision plan is supervised to ensure appropriate stockholdings</li></ul>
<b>3 Manage warehousing of supplies</b>	<ul style="list-style-type: none"><li>3.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and recognised safety precautions are applied throughout the operation in accordance with standard procedures</li><li>3.2 Warehouse is sited consistent with overall logistics support concept and consideration for siting</li><li>3.3 Warehouse functional components are established in accordance with operational requirements and commodities required to be supplied</li><li>3.4 Stores security is established and monitored</li><li>3.5 Principles of warehousing are applied to obtain maximum operational effectiveness the warehouse and personnel</li></ul>

- 3.6 Stock location methods are implemented and monitored
  - 3.7 Storage principles, as they apply to different commodity groups, are applied
  - 3.8 Warehousing documentation methods are monitored to ensure warehouse accounting is accurate and visibility of stock location in supply chain is maintained
  - 3.9 Warehousing procedures relating to receipts and issues are monitored to ensure integrity of warehousing processes
  - 3.10 Warehousing procedures relating to hazardous stocks, segregation, dispersion requirements and stock compatibility are applied
  - 3.11 Stock inspections are carried out to confirm stock records are correct, life expectancy repackaging or renewal dates are applied, serviceability of packaging is being maintained, and to identify technical inspections or routine maintenance requirements
  - 3.12 Use of material handling equipment is monitored to ensure efficient and safe material handling within the warehouse
- 4 Manage return, salvage and disposal of supplies**
- 4.1 Return processes are monitored to ensure they are applied in accordance with organisational policy and procedures
  - 4.2 Salvage processes and procedures are monitored to ensure recycling of damaged, discarded, condemned or abandoned materiel is in accordance with organisational policy and procedure
  - 4.3 Disposal processes are monitored to ensure material is appropriately removed from circulation and use in accordance with organisational policy and procedure

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIX5041 Organise supply support on deployment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing and validating numerical information accurately
- analysing task complexities such as limitations, freedoms, vulnerabilities, time limitations
- applying a broad range of problem-solving strategies
- applying supply knowledge
- interpreting instructions and applying information to actions and tasks
- interpreting policies and procedures
- making decisive, informed decisions that align with organisational requirements
- managing own planning tasks in accordance with organisational requirements
- moving forward despite planning task difficulty
- preparing and issuing instructions that clearly communicate intent and operational tasks
- using appropriate information technology and software.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- disposal processes
- environmental considerations for providing supply support
- financial delegation limits
- logistics support analysis principles and processes
- logistics support concepts
- organisation, its function and logistics support capabilities
- organisational policy and procedures relevant to supply
- organisational role relevant to specialist logistics support

- organisational writing conventions
- planning process
- return processes
- salvage processes
- warehousing procedures for hazardous stocks, segregation, dispersion requirements and stock compatibility
- warehousing procedures for receipts and issues
- WHS/OHS.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

# Assessment Requirements for TLIX5042 Organise road transport operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing and validating numerical information accurately
- analysing task complexities such as limitations, freedoms, vulnerabilities, time limitations
- applying a broad range of problem-solving strategies
- drafting and releasing complex forms of written communication
- interpreting instructions and applying to actions and tasks
- interpreting policies and procedures
- making decisive, informed decisions that align with organisational requirements
- managing at least two different road transport operations such as replenishment operations and passenger transport
- managing own planning tasks in accordance with organisational requirements
- moving forward despite task difficulty
- undertaking analysis to determine where internal and external factors impact on transport support requirements
- using appropriate information technology and software.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- environmental considerations for planning transport support
- fatigue management
- logistics analysis principles and processes
- logistics concepts
- organisation, its function and logistics capabilities
- organisational policy and procedures relevant to road transport

- organisational writing conventions
- passenger transport operations
- planning process
- regulatory standards and requirements for road transport
- replenishment operations
- vehicle and transport equipment capabilities and limitations.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations*, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIX5043 Conduct maintenance on deployed operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to organise logistics maintenance support operations in a deployed context in support of operations, in accordance with relevant organisational policy and procedures.

This unit is applicable to logistics personnel responsible for organising and managing delivery of maintenance support in a field deployment context.

The unit will usually be applied in a frontline maintenance facility supporting equipment maintenance, repair and recovery to support organisational operations.

People who undertake this unit will usually be a technician or have an engineering background. This role requires management and leadership skills.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to demonstrate

essential outcomes.

achievement of the element.

## **1 Analyse maintenance requirement**

- 1.1 Maintenance tasks are received and analysed for operational maintenance requirements
- 1.2 Information is sourced and analysed to identify maintenance factors to be considered in supporting operations
- 1.3 Logistics information management systems are utilised in scheduling and coordinating maintenance
- 1.4 Workshop equipment maintenance is scheduled within constraints of delivering maintenance support
- 1.5 Considerations for production/maintenance planning are applied to derive most efficient employment of maintenance equipment and personnel
- 1.6 Maintenance support enabling components are identified and established
- 1.7 Instructions are prepared and delivered to implement and coordinate maintenance support
- 1.8 Risk analysis is conducted to identify and mitigate against unacceptable risks
- 1.9 Technical advice is provided to management and stakeholders

## **2 Manage maintenance support**

- 2.1 Maintenance technical policy and procedure are applied when conducting maintenance support
- 2.2 Work health and safety (WHS)/occupational health and safety (OHS) requirements and recognised safety precautions are applied throughout operation in accordance with standard procedures
- 2.3 Maintenance personnel are supervised, and efficiently and effectively employed within their area of speciality
- 2.4 Repair/recovery support requests are received and appropriate response is developed to support task
- 2.5 Maintenance effort is monitored to ensure workload is effectively distributed across maintenance organisation
- 2.6 Operational or organisational constraints are recognised and maintenance tasks are directed to align with these constraints
- 2.7 Maintenance activity is monitored to ensure maintenance

organisations are conducting activity with appropriate authority and in accordance with organisational policy and procedures

- 2.8 Liaison with agencies involved in operation, maintenance and supply chain is carried out to ensure most effective coordination of effort
- 2.9 Maintenance support priorities are set to align maintenance support activities with organisational objectives
- 2.10 Management and stakeholders are advised when significant issues or developments arise that may adversely impact on technical integrity of material within the organisation
- 2.11 Maintenance records are maintained and entered into information systems

### **3 Forecast repair parts requirements**

- 3.1 Repair parts agencies are liaised with to coordinate provisioning of repair parts to meet forecast maintenance requirements
- 3.2 Supply and demand of repair parts is monitored to ensure repair parts and materials are available to support maintenance activities
- 3.3 Management of repair parts records are monitored to ensure visibility over repair parts to support maintenance planning

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX5043A Conduct maintenance on deployed operations.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIX5043 Conduct maintenance on deployed operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying maintenance support planning knowledge when planning support
- applying maintenance planning tools to inform maintenance support planning
- applying planning processes
- communicating technical advice
- delivering clear, concise, and accurate instructions
- identifying relationships between organisational goals and recognising how own planning contributes to achieving these goals
- liaising with external agencies to coordinate maintenance support
- preparing maintenance reports
- providing advice to managers
- supervising a team of tradespeople
- using information technology and software.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- backloading management principles
- backlog management principles
- cannibalisation and salvage policy and procedures
- concept of reliability, availability and maintainability/usability codes
- grades of repair
- legislative and regulatory requirements
- likely consequences of terrain and weather on material
- lines of maintenance support
- maintenance advisory bulletins
- maintenance planning processes
- maintenance policy, procedures and instructions
- maintenance role relevant to integrated logistics support
- material maintenance plan
- repair parts policy as it relates to authorisation to fit and configuration control
- repair parts supply processes
- standard operating procedures
- technical regulations, policy and procedure
- types of maintenance support
- workflow management principles
- workshop production management principles.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice

and operation manuals.

# TLIX5044 Organise health support operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to organise health support operations in a field deployment context in support of operations, in accordance with relevant organisational policy and procedures.

This unit is applicable to logistics personnel responsible for organising and managing the delivery of health support in a field deployment context.

People who undertake this unit will usually be a clinician or a health care provider. This role requires management and leadership skills.

Health elements may be comprised of a range of health capability from different disciplines (such as dental, pathology, surgical), which, when brought together, form a comprehensive health support organisation. The composition of this health support organisation will be guided by the type and scale of operation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element.

- |  |   |
|--|---|
| <b>1 Prepare for health support operations</b> | <ul style="list-style-type: none"><li>1.1 Information is sourced and analysed to identify health factors to be considered</li><li>1.2 Considerations of production/maintenance planning are applied to derive the most efficient employment of health element equipment and personnel</li><li>1.3 Maintenance of health equipment is scheduled within the constraints of delivering health support</li><li>1.4 Preparedness of health personnel is monitored to ensure personnel are competent, authorised and ready to provide health care</li><li>1.5 Principles of health support are applied to preparing and planning health support</li><li>1.6 Instructions are prepared and delivered to implement and coordinate health support operations</li><li>1.7 Technical advice is provided to management and stakeholders</li></ul> |
| <b>2 Manage evacuation support</b>             | <ul style="list-style-type: none"><li>2.1 Evacuation planning factors are taken into consideration when planning and compiling an evacuation task order</li><li>2.2 Evacuation assets are maintained in a state of high readiness to respond to evacuation tasking</li><li>2.3 Processes and procedures are established to enable despatch and control of evacuation assets in response to tasking</li><li>2.4 Evacuation support is delivered to support continuity of care to casualties requiring evacuation via the health element</li><li>2.5 Evacuation support is delivered within operational environment constraints allowing for appropriate security and protection of evacuation assets</li><li>2.6 Reception and despatch of casualties with other evacuation modes is coordinated</li></ul>                             |
| <b>3 Manage health support</b>                 | <ul style="list-style-type: none"><li>3.1 Interrelationship between health elements is managed to enable continuity of care as patient transitions through care agencies</li><li>3.2 Health care specialists and providers are consulted to ensure patient holding is appropriate and is balanced with care required</li></ul>  |

and needed to maintain health element mobility

- 3.3 Patient tracking is managed to ensure accurate picture of patient status at all times and to ensure personnel administrative system is informed of patient movements
- 3.4 Health records are maintained to enable accurate recording of care provided and basis for review and ongoing treatment
- 3.5 Health logistics are managed to ensure health resources available for care are consistent with care required and capability of health element
- 3.6 Health related reports and returns are prepared and submitted to assist with organisational health planning and coordination
- 3.7 Knowledge of relevant conventions and laws (such as the Geneva Conventions and the Laws of Armed Conflict) are applied to health support delivery
- 3.8 Welfare and administration of patients and health element personnel is monitored

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX5044A Organise health support operations.

# Assessment Requirements for TLIX5044 Organise health support operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying knowledge of health planning and coordination
- applying health planning tools to inform health planning
- delivering clear, concise, accurate and authoritative instructions
- identifying relationships between organisational goals and recognising how own planning contributes to achieving these goals
- leading a team of medical experts as required
- liaising with external agencies to coordinate health support
- preparing health related reports and returns
- supervising a team of health care workers
- using information technology and software
- working closely with a senior clinical officer to coordinate health support.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- health stores and equipment resupply systems and procedures
- legislative and regulatory environment as it relates to materiel logistics
- logistics support analysis principles and processes
- organisational policy and procedures
- organisational role relevant to specialist logistic support
- patient tracking and administration
- planning processes
- policy and procedures relating to evacuation

- preparedness requirements of health personnel
- principles of health support
- requirements relating to managing health waste
- supplying, handling and storing blood products
- tasks and composition of health elements and their points of interaction.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations*, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

# TLIX5045 Manage and monitor catering on deployed operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to organise logistics catering operations in a field deployment context in support of operations, in accordance with relevant organisational policy and procedures.

This unit is applicable to logistics personnel responsible for organising and managing the delivery of catering support in a field deployment context.

This unit may be undertaken by personnel who are not a cook or a qualified chef, however, this role requires management and leadership skills.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Prepare for catering operations**
  - 1.1 Information is sourced and analysed to identify catering factors to be considered in supporting operations
  - 1.2 Logistics information management systems and planning tools are utilised in scheduling and coordinating catering
  - 1.3 Catering equipment maintenance is scheduled within constraints of delivering catering support to operations
  - 1.4 Catering facility establishment is monitored to promote a functional and technically efficient catering operation
  - 1.5 Instructions are prepared and delivered to implement and coordinate catering operations
  - 1.6 Technical advice is provided to management and stakeholders
  - 1.7 Work health and safety (WHS)/occupational health and safety (OHS) requirements and recognised safety precautions are applied throughout operation in accordance with standard procedures
- 2 Ensure compliance with food safety**
  - 2.1 Resources required to meet food safety requirements are accessed and made available
  - 2.2 Observance of food safety programs is monitored
  - 2.3 Corrective action in response to food safety non-compliance is taken in close consultation with senior caterer
  - 2.4 Food recall or quarantine notices are acted on to ensure food safety
- 3 Manage food service**
  - 3.1 Catering team is supervised to ensure links between receipt and storage of food, food preparation and food service are actively maintained to meet food standards and catering support requirements
  - 3.2 Menu planning and preparation is monitored to ensure menu complements the operational plan and provides sound nutritional balance to personnel
  - 3.3 Staff rostering is monitored to ensure it accurately reflects catering support requirements and utilises staff efficiently and sustainably
  - 3.4 Organisational policies and procedures relating to food service are implemented and monitored in delivering catering support

- 3.5 Consistent quality in service and food product is supervised to meet food standards and catering support requirements
  - 3.6 Inventory management relating to provisioning, procurement, supply, receipt and storage of food and food service material is supervised to meet food standards and catering support requirements
  - 3.7 External stakeholders are liaised with during ongoing monitoring of catering support requirements
  - 3.8 Processes and procedures relating to food usage and resource accounting are monitored
- 4 Minimise waste and manage food and waste disposal**
- 4.1 Opportunities to reduce waste are identified and acted on within catering facility
  - 4.2 Cost control procedures are implemented to minimise waste within catering facility and to use catering resources efficiently
  - 4.3 Development and implementation of waste management arrangements are monitored to ensure waste management supports good field hygiene and environmental protection
  - 4.4 Waste management processes and procedures are monitored to ensure compliance with field hygiene and environmental standards
  - 4.5 Agencies responsible for removing waste and monitoring field hygiene are liaised with to ensure compliance with field hygiene and environmental standards

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX5045A Manage and monitor catering on deployed operations.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIX5045 Manage and monitor catering on deployed operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- displaying resilience by continuing to move forward despite operation difficulty
- identifying relationships between organisational goals and recognising how own efforts contribute to achieving these goals
- leading a team
- liaising and negotiating with stakeholders
- providing catering support in a field environment
- using appropriate information technology and software
- utilising information technology systems related to catering.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- awareness of common microbiological, physical and chemical hazards related to foods handled
- catering cost control strategies
- catering documentation and accounting procedures
- different menu systems used to support operations (such as cyclic menus)
- factors that influence menu development
- five food groups and how these are integrated into a menu
- food recall procedures within own level of responsibility
- food storage, processing and handling requirements
- food waste minimisation methods
- layout and design principles of a field catering facility

- legal obligations for food safety and quality
- options for responding to non-compliance in food safety
- organisational programs and systems for managing and supporting quality and food safety
- principles of a hazard analysis and critical control points (HACCP) based approach to managing food safety
- procedures for identifying unsafe and/or non-conforming practices or food product
- relationship between diet and nutrition with individual performance and operational capability
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and guidelines
- suitable standard for materials, measuring devices, equipment and utensils used in work area
- waste collection, recycling, handling and disposal.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIX6001 Formulate materiel logistics strategies

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to formulate materiel logistics strategies across the materiel life cycle in accordance with relevant organisational policy and procedures.

These strategies are formulated to ensure materiel and materiel systems are able to meet their stated capability requirement.

This unit was developed for logistics specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs.

This unit cannot be used in a qualification in which *TLIX6002 Contribute to materiel logistics strategies* has been used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Analyse materiel logistics environment**

1.1 Operational concept of materiel and materiel systems are analysed, and key factors and issues are identified for consideration and/or response

1.2 External and internal factors likely to impact on materiel logistics needs and capabilities are continually monitored and analysed

1.3 Key stakeholders are identified and consulted on materiel and materiel systems needs and capabilities in accordance with organisational policy and procedures

1.4 Legislation and organisational policy and procedures that may impact on materiel logistics activity are identified and analysed

### **2 Develop materiel logistics strategies**

2.1 Consultation and negotiation with key stakeholders is conducted in accordance with organisational policy and procedures

2.2 Strategic objectives are defined and documented in materiel logistics strategies

2.3 Costing analysis of strategic options is managed and documented in accordance with organisational policy and procedures

### **3 Establish priorities for materiel logistics strategies**

3.1 Strategic priorities are developed and documented that support organisational materiel logistics objectives

3.2 Strategic priorities are analysed to ensure they reflect key stakeholder capability requirements, in accordance with organisational policy and procedures

3.3 Opportunities for strategic alliances and cooperative ventures are incorporated into strategies

### **4 Communicate materiel logistics strategies**

4.1 Strategies are explained to key stakeholders

4.2 Strategies are promoted across the organisation through a variety of communication channels, in accordance with organisational policy and procedures

### **5 Evaluate materiel**

5.1 Materiel logistics strategies are regularly evaluated in

**logistics strategies**                      accordance with organisational policy and procedures

5.2 Strategies are amended and documented in accordance with organisational policy and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX6001A Formulate materiel logistics strategies.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIX6001 Formulate materiel logistics strategies

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- aligning materiel logistics strategy to organisational strategic objectives
- analysing and evaluating outcomes
- analysing materiel logistics information to determine where internal and external factors impact on the materiel logistics environment, and adjusting strategic planning activities accordingly
- applying project management knowledge when formulating materiel logistics strategies
- building and sustaining positive relationships with team members, stakeholders and clients
- committing to action, even in cases of limited information and conditions of uncertainty
- consulting and negotiating with internal and external stakeholders and resolving potential areas of conflict or concern to ensure overall objectives are achieved
- displaying resilience by continuing to move forward despite criticism or setbacks
- exercising judgement by using intelligence and common sense to shape strategic thinking
- identifying and evaluating priorities, and adjusting them as necessary to ensure they meet objectives
- identifying, assessing and prioritising competing objectives
- initiating remedial action required
- managing materiel logistics contracts and their deliverables effectively
- managing time, and prioritising work to ensure objectives are met in accordance with required schedule
- preparing complex and sensitive material, presenting information confidently and selecting appropriate medium for maximum communication effect to influence a range of audiences
- reviewing and analysing performance measurement data to guide and direct team to ensure objectives are measured against defined parameters
- sourcing information on best practice approaches adopted in public and private sectors, demonstrating an insight into how industry operates and business drivers that influence industry with their dealings

- undertaking research and analysis about operational concepts and strategic objectives to determine impacts on materiel logistics environment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- acquisition processes
- business processes
- capability performance measurement
- codification and cataloguing processes
- costing, which may include life cycle costing
- external environment scanning relating to environmental, sustainable, social, political economic and technological developments
- industrial base capability
- integrated logistics support
- international agreements and arrangements
- interoperability
- legislative and regulatory environment as it relates to materiel logistics
- logistics governance
- logistics support analysis principles and processes
- materiel logistics
- materiel system components
- organisational policy and procedures
- outsourcing/insourcing
- performance management techniques
- project management
- risk management
- strategic planning methodologies
- supply chain concepts
- technical regulation
- value chain concepts.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- computer and relevant software
- legislation, guidelines, procedures and protocols relating to materiel logistics
- materiel logistics plans.

Companion Volume implementation guides are found in VETNet -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

## TLIX6002 Contribute to materiel logistics strategies

### Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

### Application

This unit involves the skills and knowledge required to provide input to the development of materiel logistics strategies by employees or others who are not directly responsible for the development process itself. It includes contributing to the consultative, validation and review phases and providing feedback on the process.

This unit was developed for logistics specialists working within materiel logistics but is applicable to individuals in broader logistics roles.

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

This unit cannot be used in a qualification in which *TLIX6001 Formulate materiel logistics strategies* has been used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

X – Logistics

### Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Analyse the materiel logistics environment**

1.1 Stakeholders are identified and consulted on materiel needs and capabilities in accordance with organisational policy and procedures

1.2 Effective relationships are developed with stakeholders through consultation

1.3 Legislation and organisational policy and procedures that may impact on materiel logistics activity are identified and analysed

1.4 Key factors and issues that have been identified from the operational concept of the materiel and materiel system are reviewed

### **2 Contribute to materiel logistics strategies**

2.1 Organisational objectives are contributed to in clear and measurable terms

2.2 Strategies are contributed to ensure they reflect key stakeholder capability requirements

2.3 Materiel logistics strategies are introduced, consistent with strategic direction and costing

### **3 Establish priorities for materiel logistics strategies**

3.1 Strategic priorities are contributed and documented that support organisational materiel logistics objectives

3.2 Strategic priorities are analysed to ensure they reflect key stakeholder capability requirements of, in accordance with organisational policy and procedures

3.3 Opportunities for strategic alliances and cooperative ventures are incorporated into strategies

### **4 Review strategic performance**

4.1 Performance indicators and other criteria for measuring achievement are developed and documented

4.2 All key aspects of organisational performance are addressed in performance measures, to meet stakeholder interests

4.3 Performance data is analysed on a regular and planned basis in terms of indicators and performance standards, in accordance with organisational policy and procedures

4.4 Strategic performance is reported in accordance with

organisational policy and procedures

4.5 Objectives and strategies are reviewed, revised and documented as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX6002A Contribute to materiel logistics strategies.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIX6002 Contribute to materiel logistics strategies

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adhering to relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- analysing materiel logistics information to determine where internal and external factors impact on the materiel logistics environment, and adjusting strategic planning activities accordingly
- applying project management knowledge when contributing to materiel logistics strategies
- building and sustaining positive relationships with team members, stakeholders and clients
- committing to action, even in cases of limited information and conditions of uncertainty
- consulting and negotiating with internal and external stakeholders and resolving potential areas of conflict or concern to ensure overall objectives are achieved
- displaying resilience by continuing to move forward despite criticism or setbacks
- exercising judgement by using intelligence and common sense to shape strategic thinking
- identifying requirements for contribution and adjusting them as necessary to ensure they meet objectives
- identifying, assessing, and prioritising competing objectives to facilitate development of overall materiel logistics strategy
- initiating and efficiently monitoring processes
- initiating remedial action required
- managing time and prioritising work to ensure objectives are met in accordance with required schedule
- preparing complex and sensitive material, presenting information confidently and selecting appropriate medium for maximum communication effect to influence a range of audiences
- sourcing information on best practice approaches adopted in public and private sectors, demonstrating an insight into how industry operates and business drivers that influence industry with their dealings, including environmental and sustainability issues
- undertaking research and analysis to determine operational concepts and strategic objectives, and to identify impacts on materiel logistics environment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- acquisition processes
- business processes
- capability performance measurement
- codification and cataloguing processes
- costing, which may include life cycle costing
- external environment scanning relating to environmental, sustainable, social, political, economic and technological developments
- industrial base capability
- integrated logistics support
- international agreements and arrangements
- interoperability
- legislative and regulatory environment as it relates to materiel logistics
- logistics governance
- logistics support analysis principles and processes
- materiel logistics
- materiel system components
- organisational policy and procedures
- outsourcing/insourcing
- performance measurement
- project management
- strategic planning methodology
- supply chain concepts
- technical regulation
- value chain concepts.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational

situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- computer and relevant software
- legislation, guidelines, procedures and protocols relating to materiel logistics
- materiel logistics plans.

## **Links**

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# TLIX6046 Plan deployed logistics support for significant operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to plan logistics support involving numerous logistics elements on deployment in support of significant operations, in accordance with relevant organisational policy and procedures.

The application of this unit in the workplace includes responding to organisational support tasks by developing a logistics plan that enables the organisation to operate effectively and to achieve its objectives.

This unit would typically apply to a senior logistician who is supporting a significant or complex deployment with more than one logistics element. This type of operation could involve the use of various organisational assets. This activity would usually occur in a headquarters as part of a planning team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Analyse logistics requirement**

- 1.1 Operational requirement is analysed to establish logistics support scope and intent
- 1.2 Operating environment is identified and analysed to assess logistics support effect on delivery
- 1.3 Operating environment infrastructure is analysed to identify its potential to support logistics operations and/or vulnerabilities that require consideration in planning
- 1.4 Risks to logistics support delivery are identified and analysed to determine their likelihood of occurrence and potential consequences for logistics operation
- 1.5 Critical facts and assumptions are made to allow planning to progress in absence of developed current situational knowledge
- 1.6 Specialist logistics requirements are determined so that the different logistic element estimates are developed and considered in operational sustainability requirements
- 1.7 Logistics capabilities are analysed against operational requirements to identify critical shortfalls and/or define logistic support limits
- 1.8 Logistics planning information is communicated to other planning staff and management throughout the operation

### **2 Develop logistics plan**

- 2.1 Logistics information management systems are utilised to compile and analyse planning data and information
- 2.2 Options are developed, analysed and tested to establish broad advantages and disadvantages
- 2.3 Tasks, priorities, and decisive points are identified and validated
- 2.4 Preferred course of action is identified
- 2.5 Integration of contracted support is considered for inclusion in plan
- 2.6 Policy and procedures are developed to support logistics activity within operational area of deployment

- 2.7 Logistics organisational structure is developed to meet estimates within organisational resource constraints
- 2.8 Control arrangements are established within operational command and management framework
- 2.9 Logistics plan is developed to support implementation of selected course of action
- 2.10 Plan is adjusted in accordance with changing operational need
- 2.11 Contingency plans are developed
- 2.12 Logistics plan is communicated to stakeholders

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX6046A Plan deployed logistic support for significant operations.

## Links

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIX6046 Plan deployed logistics support for significant operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing and validating numerical information accurately
- analysing task complexities
- applying a broad range of problem-solving strategies to planning outcomes
- identifying operational intent and recognising how own planning contributes to mission success
- interpreting instructions and applying this to developing own actions and tasks
- interpreting technical policy and doctrine
- making informed decisions that align with organisational requirements
- moving forward despite planning task difficulty
- preparing and issuing written instructions
- reading and writing at a level to cope with a range of complex workplace materials
- undertaking analysis to determine where internal and external factors impact on logistics support requirements
- using appropriate information technology and software
- using organisational skills to manage planning tasks in concert with other stakeholders
- using planning tools
- working cooperatively as a member of a team.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- environmental considerations in planning logistics support
- logistics concepts
- logistics principles and processes
- organisation, its function and logistics capabilities
- organisational policy and procedure
- organisational role relevant to specialist logistics support
- organisational writing conventions
- planning process
- risks to logistics support.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# **TLIX6047 Monitor and provide logistics staff support for significant deployed operations**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to monitor and provide logistics staff support for significant deployed operations, in accordance with relevant organisational policy and procedures.

The application of this unit in the workplace includes providing the necessary staff support to enable an organisation to prepare for a deployment, to deploy, to remain sustained in an operating area and then to redeploy to its home location.

This unit is applicable to senior logistics personnel responsible for monitoring and coordinating logistics support at an organisational level.

The context of this performance is typically in the headquarters of an organisation with full access to information technology and support services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

X – Logistics

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Support deployment preparations**

- 1.1 Communications and reporting procedures are established with different logistics elements
- 1.2 Corporate training requirements are formulated, resourced and implemented to ensure staff competence
- 1.3 Organisational requirements are defined, communicated to stakeholders and monitored in accordance with organisational policy and procedure
- 1.4 Deficiencies in manpower and equipment are identified and an organisational response is developed
- 1.5 Scoping and definition of requirement for contracted support to organisational deployment and sustainment is undertaken
- 1.6 Planning data is gathered from subordinate organisations, collated and analysed to develop contingency plans
- 1.7 Collation and preparation of movement documentation for deployment is coordinated

### **2 Support organisation deployed elements**

- 2.1 Operational demands and deployment information are accessed and analysed to identify factors to be considered in supporting operations
- 2.2 Liaison with relevant agencies and supporting organisations (such as external contracted services) is conducted to gather information, access services and coordinate deployment activities and movements
- 2.3 Procurement and delivery of equipment and stores is monitored and appropriate action is initiated to overcome shortages
- 2.4 Operations of deployed elements are monitored and where issues are identified, organisational responses are developed and communicated
- 2.5 Accounting for, and attribution of costs for, all organisational logistics deployment activities is monitored to ensure compliance with organisational policy and procedures
- 2.6 Personnel rotation and reinforcement arrangements are monitored to ensure placement of personnel in support

operations is consistent with operational requirements and organisational policy and procedure

2.7 Personnel and material tracking is monitored to ensure accurate knowledge of location and status of personnel and material

### **3 Support organisation extraction and redeployment**

3.1 Priorities for extraction of logistic elements are determined based on need to support organisational activities

3.2 Redeployment plan is developed

3.3 Liaison with relevant agencies is conducted to gather information, access services and coordinate redeployment activities and movements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIX6047A Monitor and provide logistic staff support for significant deployed operations.

## **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIX6047 Monitor and provide logistics staff support for significant deployed operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing and validating numerical information accurately
- analysing task complexities
- applying a broad range of problem-solving strategies to planning outcomes
- identifying operational intent and recognising how own planning contributes to operation success
- interpreting instructions and applying this to developing actions and tasks
- interpreting policy and procedures
- making informed decisions that align with organisational requirements
- managing own planning tasks in accordance with other staff planners
- moving forward despite planning task difficulty
- preparing and issuing written instructions
- undertaking analysis to determine where internal and external factors impact on health support requirements, and adjusting planning accordingly
- using appropriate information technology and software
- working cooperatively as a member of a team.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- channels of communication and processes for obtaining advice, approvals
- environmental considerations in planning logistics support
- equal employment opportunity, equity and diversity principles
- legislation, regulations, and guidelines relating to deployment logistics support
- logistics concepts including mobilisation, deployment, reception, staging, onward movement, integration, sustainment, redeployment and reconstitution
- organisation, its function and logistics support capabilities
- organisational policy and procedure
- organisational writing conventions
- planning process.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

# **TLIX6048 Manage the deployment and delivery of logistics support**

## **Modification History**

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## **Application**

This unit involves the skills and knowledge required to manage the deployment and delivery of complex or significant logistics support in a deployed context in support of operations, in accordance with relevant organisational policy and procedures.

The application of this unit in the workplace includes preparing for logistics operations, deploying a logistics team from a home location to a field environment, and managing the internal operation of logistics support, extraction and return to a home location.

This unit is applicable to senior logistics personnel responsible for organising and managing delivery of integrated logistics support in a field deployment context.

This unit is designed for large operations that require significant logistics support; a typical example would be an overseas deployment for disaster support involving numerous logistics elements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

X – Logistics

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Manage preparation of logistic elements for deployment**

- 1.1 Operational requirement is analysed to establish scope and intent of logistics support
- 1.2 Deployment requirements are received and interpreted to determine logistics support required
- 1.3 Work health and safety (WHS)/occupational health and safety (OHS) requirements and recognised safety precautions are applied throughout operation in accordance with standard procedures
- 1.4 Corporate training requirements are formulated, resourced and implemented to ensure staff competence
- 1.5 Deficiencies in manpower and equipment are identified and organisational response is developed
- 1.6 Forecast shortages on arrival in operating area are anticipated and action is taken to ensure logistics support can be established and sustained
- 1.7 Preparation, packaging and marking of equipment and stores, including hazardous material, is managed to ensure effective and efficient movement
- 1.8 Movement documentation of personnel and materiel is managed to ensure it is completed
- 1.9 Organisational requirements are managed to ensure all personnel are ready for deployment and provided with support for duration of the operation
- 1.10 Instructions are prepared and issued to logistics element managers to enable them to prepare for deployment

### **2 Manage movement of logistic elements**

- 2.1 Movement to point of departure and arrival is coordinated to ensure efficient movement of all personnel and material
- 2.2 Preparation of material for movement is managed to ensure packaging, containerisation and sequencing of transportation is consistent with operational need

### **3 Manage deployment and concentration of logistic elements within area of operations**

- 2.3 Waivers required for movement of hazardous cargo are obtained in accordance with organisational policy and procedure
- 2.4 Relevant agencies are liaised with to ensure effective and efficient movement of all personnel and material
- 2.5 Logistics support to reception and staging area is coordinated to avoid congestion of personnel and materiel during disembarkation in operational area
- 3.1 Operational deployment instructions are received and interpreted to determine deployment requirements, tasks and operational commander intent
- 3.2 Logistics deployment instructions are prepared and issued to logistics element managers
- 3.3 Movement to deployment site is managed in accordance with operational environment and management instructions
- 3.4 Logistics team is sited
- 3.5 Operational or organisational constraints are recognised and logistics tasks are directed to align with these constraints
- 3.6 Activity is monitored to ensure logistics elements are conducting activity with appropriate authority and in accordance with organisational policy and procedures
- 3.7 Delivery of logistics support is managed to meet operational demands
- 3.8 Logistics support priorities are set to align activities with organisational objectives
- 3.9 Logistics information systems are utilised to monitor and coordinate logistics support operations and to inform decision making process
- 3.10 Technical advice regarding use and allocation of logistics support is provided to maximise efficiency and effectiveness of services to supported organisation

- 3.11 Liaison with agencies involved in the operation is carried out to ensure most effective coordination of effort
  - 3.12 Management and stakeholders are advised when significant issues or developments arise that may adversely impact on the operation
  - 3.13 Reports and returns relevant to integrated logistics support are prepared and issued in accordance with organisational policy and procedure
- 4 Manage extraction of logistic elements from area of operations and redeployment to home location**
- 4.1 Redeployment instructions are prepared and issued to logistics element managers
  - 4.2 Scaling down and withdrawal of deployment site is monitored to ensure it is consistent with operational environment and organisational requirements
  - 4.3 Movement to departure port is coordinated to ensure it is consistent with operational requirements
  - 4.4 Return movement to home base is coordinated through relevant authorities in accordance with organisational policy and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX6048A Manage the deployment and delivery of logistic support.

## Links

Companion Volume implementation guides are found in VETNet -

# Assessment Requirements for TLIX6048 Manage the deployment and delivery of logistics support

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing task complexities
- applying a broad range of problem-solving strategies to planning outcomes
- controlling risk when planning and executing integrated logistic support
- identifying operational intent and recognising how own planning contributes to operational success
- interpreting instructions and applying this information to developing actions and tasks
- interpreting policy and procedures
- liaising with internal and external organisations and representatives to plan and accomplish tasks
- making informed decisions that align with organisational requirements
- managing own planning tasks
- moving forward despite task difficulty
- undertaking analysis to determine where internal and external factors impact on health support requirements, and adjusting planning accordingly
- using appropriate information technology and software
- working cooperatively as a member of a team.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- channels of communication and processes for obtaining advice, approvals
- environmental considerations in logistics support
- equal employment opportunity, equity and diversity principles
- functional and technical siting requirements of specialist logistics teams
- likely logistics needs of deployed dependencies
- legislation, regulations, and guidelines relating to deployment logistic support
- logistics concepts including a knowledge of mobilisation, deployment, reception, staging, onward movement, integration, sustainment, redeployment and reconstitution
- organisation, its function and logistics capabilities
- organisational policy and procedure
- organisational writing conventions
- planning process
- specialist logistics support services including transport, material maintenance, supply, catering and health support.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

# TLIX6049 Undertake provisioning in support of deployed operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to undertake provisioning for deployed elements of an organisation in support of operations, in accordance with relevant organisational policy and procedures.

The application of this unit in the workplace includes planning and controlling necessary stockholding levels of all items of supply. Supply provisioning is a quantitative analysis and involves detailed mathematical calculations of supply factors such as known usage rates and time factors.

This unit is typically applicable to senior logistics personnel responsible for planning and coordinating logistics supply support at an organisational level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Analyse operational requirement**

1.1 Operational requirement is analysed to establish provisioning requirements

1.2 Operational factors are analysed to identify variables to be considered in provisioning

1.3 Technical supply factors are analysed to identify variables to be considered in provisioning

1.4 Liaison with other logistics planners is undertaken to inform specialist supply aspects of provisioning requirement

### **2 Calculate provisioning requirement**

2.1 Stockholding factors are determined and analysed to provide a basis for provisioning calculation

2.2 Time factors are determined and analysed to establish duration of supply and lead time required for provisioning

2.3 Usage rates are calculated to define frequency and quantity of stock to be consumed by dependencies

2.4 Total liability period is calculated to establish period dependencies will be required to provide initial self-sustainment before routine replenishment is available

2.5 Assets and liabilities are identified through analysis of stockholding and time factors in accordance with organisational policy and procedure

2.6 Surpluses or deficiencies are calculated based on established assets and liabilities

### **3 Develop and report provisioning requirement**

3.1 Provisioning data is created based upon analysis and provisioning calculations

3.2 Provisioning requirement is adjusted in accordance with changing operational need

3.3 Provisioning requirement is communicated to stakeholders

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX6049A Undertake provisioning in support of deployed operations.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIX6049 Undertake provisioning in support of deployed operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing and validating numerical information accurately and completing mathematical calculations
- analysing task complexities such as limitations, freedoms, vulnerabilities, time limitations
- applying a broad range of problem-solving strategies to planning outcomes
- calculating provisioning requirements of all classes of supply
- engaging with a range of stakeholders to research and collate provisioning information
- identifying accurately, inputs required to undertake provisioning in accordance with operational task
- interpreting policies and procedures
- interpreting policy and instructions, and applying this information to actions and tasks
- making informed decisions that align with organisational requirements
- managing own planning tasks in accordance with organisational requirements
- moving forward despite task difficulty
- preparing and issuing instructions that clearly communicate intent and tasks
- producing provisioning outputs required to support distribution planning
- undertaking analysis to determine where internal and external factors impact on logistics support requirements, and adjusting planning accordingly
- using appropriate information technology and software.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- composition and capability of supply systems and installations
- environmental considerations in provisioning
- fundamentals of sustainment to deployed provisioning
- imperatives of supply
- logistics support concepts
- national support base that supports procurement
- organisation, its function and logistics support capabilities
- organisational policy and procedure relating to procurement and provisioning
- organisational role relevant to specialist logistics support
- organisational role relevant to specialist provisioning
- organisational writing conventions
- planning processes as they apply to deployed operations
- provisioning calculation processes
- relevant risk factors as they apply to deployed operations
- time and stockholding factors, and their effect on provisioning.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIX6050 Plan distribution operations on deployment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to plan logistics distribution operations in a deployed context in support of operations, in accordance with relevant organisational policy and procedures.

The application of this unit includes developing distribution support plans to deliver supplies and transport to sustain an organisation. While distribution planning is conducted on its own, it is also conducted alongside other logistics planners in a cooperative environment where planners share information and work together to produce a cohesive and integrated logistics support plan.

This unit is applicable to logistics personnel responsible for planning and coordinating logistics support at an organisational level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Analyse operational requirement**

1.1 Operational task is received and analysed for distribution requirements

1.2 Information is sourced and analysed to identify operational and technical factors to be considered in supporting distribution operations

1.3 Logistics information management systems are utilised to compile and analyse distribution planning data and information

1.4 Usage rates of different supply classes are calculated based on historical data and consideration of operational and technical supply factors

1.5 Provisioning calculations are undertaken to develop stockholding plans and to identify replenishment arrangements, including reorder points and reorder quantities

1.6 Distribution estimates are produced

### **2 Develop distribution plan**

2.1 Distribution capabilities are identified based on stock distribution requirement, and operational and technical support requirements

2.2 Organisational structure is developed to meet distribution requirements in accordance with organisational resource constraints

2.3 Integration of contracted support is considered for inclusion in plan

2.4 Technical control arrangements are established within operational command and management framework

2.5 Distribution plan is created and approved in accordance with organisational policy and procedures

2.6 Risk analysis is conducted against distribution plan to identify and mitigate against unacceptable risks

2.7 Recommendations are provided to management regarding distribution operations and employment of distribution

capabilities

2.8 Distribution plan is communicated to stakeholders

### **3 Integrate maintenance plan with logistics support plan**

3.1 Liaison with other logistics stakeholders is undertaken to ensure distribution plan is integrated into larger logistics or operational plan/s

3.2 Distribution plan is adjusted in accordance with changing operational need or need to synchronise with other logistics functions

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIX6050A Plan distribution operations on deployment.

## **Links**

Companion Volume implementation guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIX6050 Plan distribution operations on deployment

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing and validating numerical information accurately
- analysing task complexities
- applying a broad range of problem-solving strategies to planning outcomes
- communicating complex ideas and arguments in a persuasive manner
- identifying operational intent and recognising how own planning contributes to mission success
- interpreting instructions and applying this to developing own actions and tasks
- interpreting technical policy and doctrine
- making informed decisions that align with organisational requirements
- managing planning tasks in collaboration with other stakeholders
- moving forward despite planning task difficulty
- preparing and issuing written instructions
- reading and writing at a level to cope with a range of complex workplace materials
- undertaking analysis to determine where internal and external factors impact on logistics requirements
- using appropriate information technology and software
- using planning tools
- working cooperatively as a member of a team.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- environmental considerations for planning logistics support
- legislative and regulatory environment as it pertains to distribution and logistic support
- logistics support concepts
- logistics support concepts including mobilisation, deployment, reception, staging, onward movement, integration, sustainment, redeployment and reconstitution
- organisational structures and support services
- techniques to deal with opposing views and to negotiate a consensus position
- transport logistics including stock distribution and transportation strategies.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

# TLIX6051 Plan maintenance for deployed operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to plan logistics maintenance operations in operations, in accordance with relevant organisational policy and procedures.

This unit is applicable to logistics personnel responsible for planning and coordinating maintenance support at an organisational level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                               |  |
|-------------------------------|--|
| <b>1 Analyse requirements</b> | 1.1 Operational task is received and analysed for maintenance requirements |
|-------------------------------|--|

- 1.2 Information is sourced and analysed to identify maintenance factors to be considered in supporting operations
  - 1.3 Recommendations are provided to management regarding maintenance support and employment of maintenance capabilities
- 2 Develop maintenance plan**
- 2.1 Logistics information management systems are utilised to compile and analyse maintenance planning data and information
  - 2.2 Maintenance equipment failure and repair data are used to establish type and scope of deployment maintenance support
  - 2.3 Maintenance estimates are produced to support courses of action
  - 2.4 Maintenance policy and procedures are reviewed and/or amended or developed to support maintenance activity within operational area of deployment
  - 2.5 Maintenance organisational structure is developed to meet maintenance estimates within organisational resource constraints
  - 2.6 Integration of contracted maintenance support is considered for inclusion in plan
  - 2.7 Technical control arrangements are established within operational command and management framework
  - 2.8 Maintenance plan is created in accordance with organisational policy and procedures
  - 2.9 Risk analysis is conducted against maintenance plan to identify and mitigate unacceptable risks
  - 2.10 Maintenance plan is communicated to stakeholders
- 3 Integrate maintenance plan with logistics plan**
- 3.1 Liaison with other logistics stakeholders is undertaken to ensure maintenance plan is integrated into larger logistics or operational plan
  - 3.2 Maintenance plan is adjusted in accordance with changing operational need or need to synchronise with other logistics functions

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

# Assessment Requirements for TLIX6051 Plan maintenance for deployed operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing and validating numerical information accurately
- analysing task complexities
- applying a broad range of problem-solving strategies to planning outcomes
- identifying operational intent and recognising how own planning contributes to mission success
- interpreting instructions and applying this to developing own actions and tasks
- interpreting technical policy and doctrine
- making informed decisions that align with organisational requirements
- managing planning tasks in collaboration with other stakeholders
- moving forward despite the planning task difficulty
- preparing and issuing written instructions
- reading and writing at a level to cope with a range of complex workplace materials
- undertaking analysis to determine where internal and external factors impact on logistics support requirements
- using appropriate information technology and software
- using maintenance planning tools
- working cooperatively as a member of a team.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- backloading management principles
- backlog management principles
- grades of repair
- integrated logistics support (ILS)
- legislative and regulatory environment relating to materiel maintenance
- likely consequences of terrain and weather on material
- lines of maintenance support
- logistics support concepts
- maintenance doctrine, instructions and advisory bulletins
- maintenance planning
- operational requirements of maintenance support
- organisational structures and support services
- reliability, availability, maintainability (RAM)
- technical regulations, policy and procedure
- types of maintenance support
- workflow management principles.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

# TLIX6052 Plan health support for deployed personnel

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to plan health support in support operations, in accordance with relevant organisational policy and procedures.

This unit was written to support Defence operations that are likely to involve casualties and are therefore supported by health elements. However, the skills and knowledge are applicable to a variety of deployed operations such as health support for natural disasters and humanitarian activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Analyse health

1.1 Operational situation and tempo are analysed to establish scope

- requirements** and intent of health support
- 1.2 Information is sourced and analysed to identify health support planning factors
  - 1.3 Information systems are utilised to compile and analyse casualty planning data
  - 1.4 Health risk assessments are prepared to classify health risks to the organisation and to inform development of health estimate
  - 1.5 Casualty estimates are produced to inform health planning and compilation of health estimate
  - 1.6 Health estimates are produced to support a number of courses of action to support command appreciation
- 2 Develop health support plan**
- 2.1 Health support organisational structure is developed to meet health estimates in accordance with organisational resource constraints
  - 2.2 Lines of health support and types of health support are identified along with clear lines of responsibility and agreed casualty exchange points
  - 2.3 Imperatives of health support are applied to developing health support plan and identifying a preferred course of action
  - 2.4 Health support control measures are determined to provide adequate regulation of casualties and to support casualty survivability
  - 2.5 Health information requirements are planned and integrated into health support plan to ensure health information is collected and analysed to inform ongoing health planning
  - 2.6 Health administration requirements are planned and integrated into health support plan
  - 2.7 Health plan is developed to detail provision of services, and establishment and operation of operational health elements
  - 2.8 Health plan is communicated to stakeholders
- 3 Integrate health plan**
- 3.1 Liaison with other stakeholders is undertaken to ensure health plan is integrated into larger logistics or operational plan
  - 3.2 Health plan is adjusted in accordance with changing operational tempo or need to synchronise with other logistics functions

- 3.3 Specialist health input and recommendations are provided to management regarding health support and employment of health support capabilities

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX6052A Plan health support for deployed personnel.

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIX6052 Plan health support for deployed personnel

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing and validating numerical information accurately
- analysing task complexities
- applying a broad range of problem-solving strategies to planning outcomes
- identifying operational intent and recognising how own planning contributes to operation success
- interpreting instructions and applying this information to developing actions and tasks
- interpreting policy and procedures
- making informed decisions that align with organisational requirements
- managing own planning tasks in collaboration with other staff planners
- moving forward despite planning task difficulty
- preparing and issuing written instructions
- undertaking analysis to determine where internal and external factors impact on health support requirements, and adjusting planning accordingly
- using appropriate information technology and software
- working cooperatively as a member of a team.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- environmental consideration for planning health support
- estimation of casualty numbers and types
- functionality and operation of logistics information management systems
- health capabilities
- health intelligence sources, collection and analysis processes
- health planning inputs to staff planning process
- health stores and equipment including resupply systems and procedures
- integrated logistics support (ILS)
- legislative and regulatory environment relating to materiel logistics and health services delivery
- organisational policy and procedure relating to health support
- patient tracking and administration
- policy and procedures relating to surface evacuation
- preparedness requirements of health personnel and equipment
- principles of health support
- requirements relating to managing health waste
- risks to health support
- staff planning process
- supplying, handling and storing blood products
- tasks and composition of health elements, and their points of interaction
- writing conventions.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice

and operation manuals.

# TLIX6053 Coordinate health support operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to coordinate health support operations in support operations in accordance with relevant organisational policy and procedures.

This unit is applicable to logistics personnel who have specialist health planning skills and are responsible for coordinating logistics support across a variety of health elements at an organisational level.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### 1 Coordinate health information collection to aid

1.1 Health information requirements are identified to contribute to establishing and maintaining an accurate

- health planning and health support delivery**
- understanding of current and potential health threats
  - 1.2 Health elements are liaised with to establish arrangements for collecting and reporting information
  - 1.3 Information management systems and information from health elements are utilised to compile and analyse health data and information to identify significant trends or data and develop an understanding of current and emerging health threats
  - 1.4 Health estimates are produced and updated based on analysis of health information and direction from health specialists
  - 1.5 Health estimates are communicated to stakeholders to enable appropriate employment of health support capabilities
- 2 Undertake casualty regulation in support of operations**
- 2.1 Casualty regulation strategies are determined and implemented to ensure efficient routing of casualties to appropriate treatment facilities
  - 2.2 Effectiveness of casualty regulation strategies is monitored and adapted to ensure strategies reflect environmental and operational situation needs
  - 2.3 Casualty evacuation is coordinated to support appropriate movement of casualties around area of operations
- 3 Coordinate supply and support services to health facilities**
- 3.1 Arrangements for removing and disposing health related waste are coordinated
  - 3.2 Water resupply to health facilities is monitored to ensure water availability is consistent with health dependency being supported
  - 3.3 Laundry support to health facilities is coordinated to ensure linen and clothing availability is consistent with health dependency being supported
  - 3.4 Mortuary support to health facilities is coordinated to ensure remains storage is consistent with operational need and operational plan for handling and repatriating human remains
  - 3.5 Medical and dental supply arrangements are monitored to ensure perishable and/or disposable items are supplied consistent with health dependency being

supported, and identified and forecasted usage rates

3.6 Procurement, transportation and supply of whole blood is coordinated to ensure surgical elements have sufficient quantities of blood to meet current and potential health care

#### **4 Coordinate health administration**

4.1 Accurate records of organisational clinical workload and patient care statistics are maintained to provide a basis for analysis and service improvement

4.2 Medical reports and returns are prepared and issued to provide an accurate picture of health status

4.3 Advice is prepared and provided on health administration matters to health elements to ensure delivery of health care and handling of health administrative matters are in accordance with organisational policy and procedure

4.4 Casualty notification and report updates are prepared and issued to notify and provide updates on casualty status to family or other interested parties

4.5 Relevant agencies are liaised with to seek advice on casualty welfare and administration, and to ensure health support provided is in accordance with organisational policy and procedures

4.6 Health support operations are monitored to ensure health support provided is in accordance with organisational policy and procedures

### **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

### **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to TLIX6053A Coordinate health support operations.

## **Links**

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

# Assessment Requirements for TLIX6053 Coordinate health support operations

## Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing and validating numerical information accurately
- applying a broad range of problem-solving strategies to planning outcomes
- applying organisational policy and procedures relating to health support delivery
- applying outcomes of health risk analysis to planning and coordinating current operations
- collating and analysing health information to identify current and emerging health threats
- coordinating health administration in accordance with organisational policy and procedure
- coordinating provision of health support service to deployed health facilities
- identifying operational intent and recognising how own work contributes to operational success
- identifying viable and useful health information sources and facilitating their collection
- interpreting instructions and applying to actions and tasks
- interpreting policies and procedures
- maintaining health threat assessment (health estimate) based on collection and analysis of health information
- making informed decisions that align current health support operation to organisational requirements
- making specific recommendation/s to medical specialist regarding emerging health threats
- managing own tasks in collaboration with other planners
- moving forward despite planning task difficulty
- preparing and issuing written instructions
- undertaking analysis to determine where internal and external factors impact on health support requirements and adjusting planning accordingly
- using appropriate information technology and software
- working cooperatively as a member of a team.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- casualty regulation strategies, concepts and principles
- environmental consideration in health support
- functionality and operation of logistics information management systems
- health information collection, analysis and application
- health stores and equipment including resupply systems and procedures
- laundry requirements relating to health support
- legislative and regulatory environment relating to materiel logistics and health services delivery
- mortuary requirements relating to health support
- organisational policy and procedure relating to health support
- patient tracking and administration
- policy and procedure relating to evacuation
- principles of health support
- requirements relating to managing health waste
- risks to health support
- supplying, handling and storing blood products
- tasks and composition of health elements and their points of interaction.

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

## Links

Companion Volume implementation guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851>

## UETIDRRF02B Perform pole top rescue

### Modification History

Release	Action		Details	Points
	Update	Pre-requisite	HLTAID001 Provide cardiopulmonary resuscitation	

### Unit Descriptor

#### Unit Descriptor

#### 1) Scope:

##### 1.1) Descriptor

This Competency Standard Unit covers the performance of pole top rescue procedures as an emergency procedure required in the work place. It specifies the mandatory requirements of rescue from a pole top and how they apply in the context of transmission, distribution and rail work functions. It encompasses responsibilities for rescue, health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

### Application of the Unit

#### Application of the Unit 2)

This competency standard unit shall be selected as part of an endorsed skill set for the purposes of refresher training and/or to meet regulatory and/or network requirements.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).

Practice in the workplace and during training is also subject to regulations directly related to occupational

health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc

## Licensing/Regulatory Information

### License to practice 3)

The skills and knowledge described in this unit may require a licence/registration to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to Occupational Health and Safety, electricity/telecommunications/gas/water industry safety and compliance, environmental protection, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

ESI employees are required to maintain currency in this Unit for authorisation/approval to work on ESI Networks.

## Pre-Requisites

### Prerequisite Unit(s) 4)

### Competencies 4.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been

**Prerequisite Unit(s) 4)**

confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed.

Common Unit Group

Unit Code	Unit Title
HLTAID001	Provide cardiopulmonary resuscitation

**Literacy and numeracy skills 4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

**Employability Skills Information**

**Employability Skills 5)**

This unit contains employability skills

**Elements and Performance Criteria Pre-Content**

6) Elements describe the essential outcomes of a competency standard unit  
 Performance Criteria describe the required performance needed to demonstrate achievement of the element.  
 Assessment of performance is to be consistent with the Evidence Guide.

**Elements and Performance Criteria**

**ELEMENT PERFORMANCE CRITERIA**

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1 Prepare to perform pole top rescue	1.1 Instruction in hazards and risk control measures for specific work functions and work areas are identified and obtained. (This will include the risk assessment and control measures taken by the individual performing the rescue).
	1.2 Tools and emergency equipment are checked for safety, functionality and placed in an accessible location to facilitate response and rescue according to established procedures.
2 Carry out pole top rescue.	2.1 Workplace procedures and work instructions for controlling risk are followed.
	2.2 Workplace procedures for accessing the pole top and removing the victim where necessary from contact with live apparatus.
	2.3 Workplace procedures for attaching the emergency lowering equipment and lowering the victim to the ground are followed.
	2.4 Workplace procedures for carrying out CPR, if required, at the site and treatment where necessary by medical professionals are followed.
	2.5 The worksite is secured and entry controlled until appropriate authorities inspect and release the site.
3 Complete the pole top rescue procedure	3.1 Processes for reporting accidents and/or incidents to authorised personnel are confirmed in accordance with established procedures.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

**8) Essential Knowledge and Associated Skills (EKAS):** This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of pole top rescue equipment and procedures.

All knowledge and skills detailed in this unit should be contextualised to current

## REQUIRED SKILLS AND KNOWLEDGE

industry practices and technologies.

### KS01-TRF02B Pole Top Rescue

Evidence shall show an understanding of pole top rescue to an extent indicated by the following aspects:

T1 Emergency procedures for the pole top rescue of a victim encompassing:

- Inspection of rescue equipment
- Assessing hazards to rescuer, victim and others
- Isolation procedures where appropriate
- Knowledge of Safe Approach Distances (SAD's) appropriate to Pole Top Rescue
- Involvement of external emergency services

T2 Emergency procedures for the skills for the pole top rescue of a victim encompassing:

- Placement of rescue equipment
- Controlling hazards to rescuer, victim and others
- Maintaining Safe Approach Distances (SAD's) appropriate to Pole Top Rescue
- Practical demonstration of rescuing a person
- Removing victim to safe location / place of safety

## Evidence Guide

### EVIDENCE GUIDE

9) This provides essential advice for assessment of the competency standard unit and must be read in conjunction with the Performance Criteria and the range statement of the competency standard unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment 9.1)

In accordance with the National Refresher Training Recognition Protocol for the Electricity Supply Industry, this unit is identified as a Refresher Training unit and is only available for use by industry to meet industry protocols and regulatory requirements.

Industry has defined Refresher Training as:

“A competency confirmation event which may include training, the purpose of which is to compensate for or prevent deterioration in a previously achieved standard of performance”

Under the protocol and the applicable State or Territory legislative and regulatory requirements, Electricity Supply Industry employees are required to maintain currency in this Unit for authorisation/approval to work on ESI Networks.

Industry accepts that opportunities to practice emergency procedures are generally restricted to simulated exercises in a controlled environment during competency confirmation programs.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be ‘rich’ in nature so as to minimise error in judgment.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments.

An industry endorsed Learning Assessment Plan (LAP) has been developed to support this unit.

**Critical aspects of evidence required to demonstrate competency in this unit 9.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated at each competency confirmation event.

- In accordance with State and Territory regulations and the “Assessment Guidelines – UET12”. Evidence shall also comprise:
  - A performance demonstrated within the timeframes

typically expected of the rescue procedure. In particular the assessment of this unit shall confirm that a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range; and
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment.
- Demonstrated performance across a representative range of contexts from the prescribed items below:

<b>Range of tools/equipment/materials/procedures/workplaces/other variables</b>		
<b>Group No</b>	<b>The minimum number of items on which skill is to be demonstrated</b>	<b>Item List</b>
A	All, to the satisfaction of the assessor:	Inspection and placement of rescue equipment
B	All, to the satisfaction of the assessor	Perform pole top rescue in accordance with workplace procedures

### **Context of and specific resources for assessment 9.3)**

This unit should be assessed as it relates to organisational rescue practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to safely undertake actual performance of pole top rescue procedures in the workplace.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency working in a realistic environment and a variety of conditions.

**Method of assessment****9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

**Concurrent assessment and relationship with other units****9.5)**

For optimisation of training and assessment effort, competence in this unit is not recommended to be assessed concurrently with any other unit.

**Range Statement****RANGE STATEMENT**

**10)** This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to performing pole top rescue procedures in the workplace and will include the following:

Applying work procedures and instructions as they apply to risk control and personal safety measures.

## RANGE STATEMENT

Inspection and placement of rescue equipment to facilitate a prompt response and rescue from an incident at the pole top.

Applying rescue procedures as applicable to poles which may include; wood, spun concrete, steel/concrete, steel, and composites with cross arms which may include; wood, steel, and composites.

Accessing the pole top and placing, securing and attaching the rescue equipment/lowering device to the victim in accordance with workplace procedures.

Removing the victim from contact with any live conductors/apparatus where necessary in accordance with workplace procedures.

Lowering the victim to the ground and performing CPR if required in accordance with workplace procedures.

Facilitating treatment by medical professionals when and where required

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons
- Assessing risk
- Assessment
- Authorisation
- Emergency
- Established procedures
- Fall prevention
- Hazards
- Identifying hazards
- Inspect
- Legislation
- Notification
- OHS practices
- OHS issues
- Permits and/or permits to work
- Personnel
- Requirements
- Rescue Equipment Testing procedures
- Work clearance systems

## TLISS00092 Mentoring Skill Set

### Modification History

Release 1. This is the first release of this skill set in the TLI Transport and Logistics Training Package.

This skill set replaces and is equivalent to the TLISS00070 Mentoring Skill Set.

### Description

This Skill Set reflects the work required by people who mentor individuals or small groups (two to five people) across all sectors of the Transport and Logistics Industry.

### Pathways Information

The TLISS00092 Mentoring Skill Set is part of the TLI Transport and Logistics Training Package.

### Licensing/Regulatory Information

Not applicable.

### Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIM400 Mentor individuals or small groups

4

### Target Group

People interested in mentoring individuals or small groups (two to five people) across all sectors of the Transport and Logistics Industry.

This Skill Set has been developed by industry for experienced workers who take on the role of mentoring in an on-the-job environment. It is intended for use by workers across a range of sectors in the Transport and Logistics Industry.

## **Suggested words for Statement of Attainment**

This TLISS00092 Mentoring Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who prepare for, undertake and review mentoring to develop the required workplace competence in other workers on a one-to-one or small group basis in an on-the-job environment.

## **Custom Content Section**

Not applicable.

# TLISS00093 Integrated Logistics Support Inventory Controller Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00020 Integrated Logistics Support Inventory Controller Skill Set.

## Description

This Skill Set is for individuals who have functional responsibility for the control of inventory and includes defining stockholding policy, usage rates, demand management, performance management and disposal.

## Pathways Information

The TLISS00093 Integrated Logistics Support Inventory Controller Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Candidates should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

## Skill Set Requirements

A total of **7 units** of competency must be attained.

PSPGOV404 Develop and implement work unit plans

B

PSPPROC303 Carry out basic procurement

A

TLIP5036 Manage assets

TLIR4001 Monitor supplier performance

TLIX4028 Apply knowledge of logistics

TLIX4030 Apply knowledge of materiel sustainment

TLIX4035 Maintain technical data and information

## **Target Group**

People interested in a practitioner role, generally in the acquisition phase of the materiel life cycle. This role involves establishing the inventory management supply chain for the in-service phase of the materiel life cycle and strongly aligns with the roles of Logistic Inventory Controller.

## **Suggested words for Statement of Attainment**

This TLISS00093 Integrated Logistics Support Inventory Controller Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who control line items or fleets within a supply system in an acquisition environment.

## **Custom Content Section**

Not applicable.

# TLISS00094 Integrated Logistics Support Management Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00021 Integrated Logistics Support Management Skill Set.

## Description

This Skill Set is for individuals who work as an integrated logistics support (ILS) manager.

## Pathways Information

The TLISS00094 Integrated Logistics Support Management Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Candidates should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

## Skill Set Requirements

A total of **4 units** of competency must be attained.

TLIX50 Develop and review integrated logistics support plans  
03

TLIX50 Develop integrated logistics support processes and procedures  
04

TLIX50 Manage integrated logistics support operations  
05

TLIX50 Provide specialist integrated logistics support advice  
10

## Target Group

People interested in an ILS manager role, generally in the acquisition phase of the materiel life cycle. An ILS manager coordinates ILS activities to contribute to the design of the mission and support systems. ILS Managers often manage a team.

## Suggested words for Statement of Attainment

This TLISS00094 Integrated Logistics Support Management Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for the integrated logistics support management function.

## Custom Content Section

Not applicable.

# TLISS00095 Integrated Logistics Support Practitioner Skill Set

## Modification History

Release 1. New Skill Set

This Skill Set replaces and is equivalent to the TLISS00019 Integrated Logistics Support (ILS) Practitioner Skill Set.

## Description

This Skill Set is for individuals who work as a specialist integrated logistics support (ILS) practitioner.

## Pathways Information

The TLISS00095 Integrated Logistics Support Practitioner Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Candidates should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

## Skill Set Requirements

A total of **7 units** of competency must be attained.

PSPGOV404 Develop and implement work unit plans

B

PSPPROC30 Carry out basic procurement

3A

TLIX4007 Implement and monitor integrated logistics support plans

TLIX4008 Conduct integrated logistics support activities

TLIX4009 Apply integrated logistics support processes and procedures

TLIX4028 Apply knowledge of logistics

TLIX4030 Apply knowledge of materiel sustainment

## Target Group

People interested in a practitioner role, generally in the acquisition phase of the materiel life cycle. A practitioner is part of the team and contributes to the overall management of the ILS program but is not responsible for the program.

## Suggested words for Statement of Attainment

This TLISS00095 Integrated Logistics Support Practitioner Skill Set meets the industry requirements for the specialist integrated logistics support (ILS) practitioner role.

## Custom Content Section

Not applicable.

# TLISS00096 Logistics Configuration Management Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00024 Logistics Configuration Management Skill Set.

## Description

This Skill Set is for individuals who perform tasks relating to configuration items.

## Pathways Information

The TLISS00096 Logistics Configuration Management Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Candidates should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

## Skill Set Requirements

A total of **4 units** of competency must be attained.

TLIX402 Implement and monitor configuration management plans  
2

TLIX402 Conduct configuration management activities  
3

TLIX402 Apply configuration management processes and procedures  
4

TLIX403 Apply knowledge of technical regulatory framework  
2

## **Target Group**

People interested in a management role and in applying technical and administrative direction and surveillance to identify and document the functional and physical characteristics of a configuration item, to control changes to those characteristics and to record and report change processing and implementation status.

## **Suggested words for Statement of Attainment**

This TLISS00096 Logistics Configuration Management Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who conduct configuration management.

## **Custom Content Section**

Not applicable.

# TLISS00097 Logistics Executive Management Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00025 Logistics Executive Management Skill Set.

## Description

This Skill Set is for individuals who move into materiel logistics executive management streams.

## Pathways Information

The TLISS00097 Logistics Executive Management Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Candidates should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

## Skill Set Requirements

A total of **6 units** of competency must be attained.

BSBMGT6 Provide leadership across the organisation  
05

BSBRSK50 Manage risk  
1

PSPGOV60 Establish and maintain strategic networks  
2B

PSPGOV60 Persuade and influence opinion  
5A

PSPGOV60 Prepare high-level/sensitive written materials

6A

PSPPOL603 Manage policy implementation

A

## Target Group

People interested in an executive role. Executives manage programs, program offices or directorates and will require a sound understanding of the acquisition and sustainment phases of the materiel logistics life cycle.

## Suggested words for Statement of Attainment

These units of competency from the BSB Business Training Package and the PSP Public Sector Training Package meet the.

This TLISS00097 Logistics Executive Management Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for executive managers within the specific area of materiel logistics.

## Custom Content Section

Not applicable.

# TLISS00098 Logistics Inventory Controller Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00026 Logistics Inventory Controller Skill Set.

## Description

This Skill Set is for individuals who have functional responsibility for the control of inventory.

## Pathways Information

The TLISS00098 Logistics Inventory Controller Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Candidates should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

## Skill Set Requirements

A total of **7 units** of competency must be attained.

PSPGOV404 Develop and implement work unit plans  
B

PSPPROC30 Carry out basic procurement  
3A

TLIP5036 Manage assets

TLIR4001 Monitor supplier performance

TLIX4028 Apply knowledge of logistics

TLIX4029 Apply knowledge of integrated logistics support

TLIX4035 Maintain technical data and information

## Target Group

People interested in a practitioner role, generally in the in-service phase of the materiel life cycle. This role involves defining stockholding policy, monitoring usage rates, demand planning, performance management and disposal.

## Suggested words for Statement of Attainment

This TLISS00098 Logistics Inventory Controller Skill from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who control line items or fleets within a supply system in a logistics environment.

## Custom Content Section

Not applicable.

## TLISS00099 Logistics Product Management Skill Set

### Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00027 Logistics Product Management Skill Set.

### Description

This Skill Set is for individuals who manage line items or fleets within a supply system.

### Pathways Information

TLISS00099 Logistics Product Management Skill Set is part of the TLI Transport and Logistics Training Package.

### Licensing/Regulatory Information

Candidates should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

### Skill Set Requirements

A total of **5 units** of competency must be attained.

TLIL50 Manage a supply chain  
55

TLIP50 Manage assets  
36

TLIR50 Manage suppliers  
14

TLIX40 Apply knowledge of integrated logistics support  
29

TLIX50 Manage materiel sustainment operations  
14

## **Target Group**

People interested in a management role and in managing line items or fleets in a logistics environment from supplier, through the supply chain to the client as well as in managing maintenance processes.

## **Suggested words for Statement of Attainment**

This TLISS00099 Logistics Product Management Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individual who manage line items or fleets within a supply system.

## **Custom Content Section**

Not applicable.

# TLISS00100 Logistics Sustainment Management Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00028 Logistics Sustainment Management Skill Set.

## Description

This Skill Set is for individuals who work as logistics sustainment managers.

## Pathways Information

The TLISS00100 Logistics Sustainment Management Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Candidates should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

## Skill Set Requirements

A total of **4 units** of competency must be attained.

TLIX50 Develop and review materiel sustainment plans  
12

TLIX50 Develop materiel sustainment processes and procedures  
13

TLIX50 Manage materiel sustainment operations  
14

TLIX50 Provide specialist materiel sustainment advice  
19

## **Target Group**

People interested in a management role, generally in the in-service phase of the materiel life cycle. A manager will use integrated logistics support (ILS) and other disciplines to manage mission and support systems. Sustainment managers often manage a team.

## **Suggested words for Statement of Attainment**

This TLISS00100 Logistics Sustainment Management Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for the logistics sustainment management function.

## **Custom Content Section**

Not applicable.

# TLISS00101 Logistics Sustainment Practitioner Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00029 Logistics Sustainment Practitioner Skill Set.

## Description

This Skill Set is for individuals who work as a specialist logistics practitioner in materiel sustainment.

## Pathways Information

TLISS00101 Logistics Sustainment Practitioner Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Candidates should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

## Skill Set Requirements

A total of **7 units** of competency must be attained.

PSPGOV404 Develop and implement work unit plans

B

PSPPROC30 Carry out basic procurement

3A

TLIX4016 Implement and monitor materiel sustainment plans

TLIX4017 Conduct materiel sustainment activities

TLIX4018 Apply materiel sustainment processes and procedures

TLIX4028 Apply knowledge of logistics

TLIX4029 Apply knowledge of integrated logistics support

## Target Group

People interested in a practitioner role, generally in the in-service phase of the materiel life cycle. Practitioners use integrated logistics support (ILS) and other disciplines to sustain mission and support systems.

## Suggested words for Statement of Attainment

This TLISS00101 Logistics Sustainment Practitioner Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a logistics sustainment practitioner.

## Custom Content Section

Not applicable.

## **TLISS00102 Access and Move a Track Vehicle Within a Defined Worksite Skill Set**

### **Modification History**

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00001 Access and Move a Track Vehicle Within a Defined Worksite Skill Set.

### **Description**

This Skill Set is for individuals who access rail track to run track vehicle within a defined worksite as part of their job role.

### **Pathways Information**

The TLISS00102 Access and Move a Track Vehicle Within a Defined Worksite Skill Set is part of the TLI Transport and Logistics Training Package.

### **Licensing/Regulatory Information**

Not applicable.

### **Skill Set Requirements**

A total of **2 units** of competency must be attained.

TLIC205 Access rail track to run track vehicle within defined worksite  
4

TLIF208 Safely access the rail corridor  
0

### **Target Group**

People interested in track vehicle operations within the rail infrastructure environment where a track vehicle is to be moved within a defined worksite.

## **Suggested words for Statement of Attainment**

This TLISS00102 Access and Move a Track Vehicle Within a Defined Worksite Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a track vehicle operator within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

## **TLISS00103 Accessing the Rail Corridor Skill Set**

### **Modification History**

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00002 Accessing the Rail Corridor Skill Set.

### **Description**

This Skill Set is for individuals who access the rail corridor.

### **Pathways Information**

The TLISS00103 Accessing the Rail Corridor Skill Set is part of the TLI Transport and Logistics Training Package.

### **Licensing/Regulatory Information**

Not applicable.

### **Skill Set Requirements**

A total of **1 unit** of competency must be attained.

TLIF20 Safely access the rail corridor  
80

### **Target Group**

People interested in induction to the rail corridor. This Skill Set is intended for anyone who is required to access the rail corridor and/or rail danger zone as part of their job role.

### **Suggested words for Statement of Attainment**

This TLISS00103 Accessing the Rail Corridor Skill Set from the TLI Transport and

Logistics Training Package meets the industry requirements for individuals who work within the rail environment and access the rail infrastructure corridor.

## **Custom Content Section**

Not applicable.

# TLISS00104 Aluminothermic Welding Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00003 Aluminothermic Welding Skill Set.

## Description

This Skill Set is for individuals who heat and cut materials using oxy-LPG equipment and weld rail using the aluminothermic welding process.

## Pathways Information

The TLISS00104 Aluminothermic Welding Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **2 units** of competency must be attained.

TLIW30 Weld rail using aluminothermic welding process  
15

TLIW30 Heat and cut materials using oxy-LPG equipment for the rail industry  
35

## Target Group

People interested in the role of aluminothermic welder within the rail infrastructure environment.

## **Suggested words for Statement of Attainment**

This TLISS00104 Aluminothermic Welding Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as an aluminothermic welder within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

## TLISS00105 Blocking Protection Skill Set

### Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00004 Blocking Protection Skill Set.

### Description

This Skill Set is for individuals who implement track blocking protection as part of their job role as a protection officer.

### Pathways Information

The TLISS00105 Blocking Protection Skill Set is part of the TLI Transport and Logistics Training Package.

### Licensing/Regulatory Information

Not applicable.

### Skill Set Requirements

A total of **3 units** of competency must be attained.

TLIF20 Safely access the rail corridor  
80

TLIF30 Conduct track protection assessment  
83

TLIL30 Implement absolute signal blocking  
82

### Target Group

People interested in the role of protection officer or anyone required to implement track blocking protection within the rail infrastructure environment.

## **Suggested words for Statement of Attainment**

This TLISS00105 Blocking Protection Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a protection officer operating within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00106 Conduct Track Protection Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00005 Conduct Track Protection Skill Set.

## Description

This Skill Set is for individuals who carry out a track protection assessment as part of their job role.

## Pathways Information

The TLISS00106 Conduct Track Protection Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **2 units** of competency must be attained.

TLIF20 Safely access the rail corridor  
80

TLIF30 Conduct track protection assessment  
83

## Target Group

People interested in the role of protection/access planner or people required to conduct a track protection assessment prior to work being carried out within the rail infrastructure environment.

## **Suggested words for Statement of Attainment**

This TLISS00106 Conduct Track Protection Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a protection/access planner operating within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00107 Control Rail Traffic Through Worksite Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00006 Control Rail Traffic Through Worksite Skill Set.

## Description

This Skill Set is for individuals who control rail traffic through a worksite as part of their job role as a protection officer.

## Pathways Information

The TLISS00107 Control Rail Traffic Through Worksite Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **3 units** of competency must be attained.

TLIF20 Safely access the rail corridor  
80

TLIF30 Conduct track protection assessment  
83

TLIL30 Implement a track work authority and manage rail traffic through worksites  
83

## Target Group

People interested in the role of protection officer within the rail infrastructure environment or people required to control rail traffic through a worksite.

## **Suggested words for Statement of Attainment**

This TLISS00107 Control Rail Traffic Through Worksite Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a protection officer operating within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00108 Coordinate Multiple Work Groups Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00007 Coordinate Multiple Work Groups Skill Set.

## Description

This Skill Set is for individuals who plan and coordinate protection for multiple work groups as part of their job role of coordinating protection officer/possession protection officer.

This Skill Set can only be attained in addition to one or more Skill Sets for the role of protection officer or possession protection officer.

## Pathways Information

The TLISS00108 Coordinate Multiple Work Groups Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIL40 Plan and coordinate protection for multiple worksites within limits of a work  
69 on track authority

## Target Group

People interested in the role of coordinating protection officer/coordinating possession protection officer within the rail infrastructure environment, who are required to plan and coordinate protection for multiple work groups.

People who have attained TLIW2001 Operate under track protection rules and are interested in a coordinating role.

## **Suggested words for Statement of Attainment**

This TLISS00108 Coordinate Multiple Work Groups Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a coordinating protection officer/coordinating possession protection officer operating within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00109 Decommission Mechanical Signalling Infrastructure and Interlocking Equipment Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00008 Decommission Mechanical Signalling Infrastructure and Interlocking Equipment Skill Set.

## Description

This Skill Set is for individuals who decommission mechanical signalling infrastructure equipment and interlocking equipment from service, in accordance with safeworking and regulatory requirements, and workplace procedures.

## Pathways Information

The TLISS00109 Decommission Mechanical Signalling Infrastructure and Interlocking Equipment Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIS40 Decommission mechanical signalling infrastructure and interlocking  
07 equipment from service

## Target Group

People interested in decommissioning mechanical signalling infrastructure and interlocking equipment in a rail infrastructure environment.

## **Suggested words for Statement of Attainment**

This TLISS00109 Decommission Mechanical Signalling Infrastructure and Interlocking Equipment Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who decommission mechanical signalling and interlocking equipment in the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00110 Electric Track Welding Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00010 Electric/Track Welding Skill Set.

## Description

This Skill Set is for individuals who heat and cut materials using oxy-LPG equipment and apply an electric welding process to rail.

## Pathways Information

The TLISS00110 Electric Track Welding Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **2 units** of competency must be attained.

TLIW00 Apply electric welding process to rail  
36

TLIW30 Heat and cut materials using oxy-LPG equipment for the rail industry  
35

## Target Group

People interested in the role of electric track welder within the rail infrastructure environment.

## **Suggested words for Statement of Attainment**

This TLISS00110 Electric Track Welding Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as an electric track welder within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00111 Examining Concrete/Masonry Structures Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00011 Examining Concrete/Masonry Structures Skill Set.

## Description

This Skill Set is for individuals who examine concrete/masonry structures in accordance with rail industry standards and workplace requirements.

## Pathways Information

The TLISS00111 Examining Concrete/Masonry Structures Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIB30 Examine concrete/masonry structures  
98

## Target Group

People interested in a role that includes examining concrete/masonry structures within the rail infrastructure environment.

## **Suggested words for Statement of Attainment**

This TLISS00111 Examining Concrete/Masonry Structures Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work within the rail infrastructure environment and are required to examine concrete/masonry structures.

## **Custom Content Section**

Not applicable.

# TLISS00112 Examining Steel Structures Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00012 Examining Steel Structures Skill Set.

## Description

This Skill Set is for individuals who examine steel structures in accordance with rail industry standards.

## Pathways Information

The TLISS00112 Examining Steel Structures Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI32515 Certificate III in Rail Infrastructure or equivalent.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **5 units** of competency must be attained.

TLIB3088 Examine steel structures

MEM1800 Use hand tools  
1C

MEM2400 Perform basic penetrant testing  
1B

MEM2400 Perform basic magnetic particle testing  
3B

MEM2401 Apply metallurgy principles  
2C

## **Target Group**

People interested in a role that includes examining steel structures within the rail infrastructure environment who have a TLI32515 Certificate III in Rail Infrastructure or equivalent.

## **Suggested words for Statement of Attainment**

This TLISS00112 Examining Steel Structures Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work within the rail infrastructure environment and are required to examine steel structures.

## **Custom Content Section**

Not applicable.

# TLISS00113 Examining Timber Structures Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00013 Examining Timber Structures Skill Set.

## Description

This Skill Set is for individuals who examine timber structures in accordance with rail industry standards.

## Pathways Information

The TLISS00113 Examining Timber Structures Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI32515 Certificate III in Rail Infrastructure or equivalent.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIB30 Examine timber structures

87

## Target Group

People interested in a role that includes examining timber structures within the rail infrastructure environment who have a TLI32515 Certificate III in Rail Infrastructure or equivalent.

## **Suggested words for Statement of Attainment**

This TLISS00113 Examining Timber Structures Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work within the rail infrastructure environment and are required to examine timber structures.

## **Custom Content Section**

Not applicable.

## TLISS00114 Flashbutt Welding Skill Set

### Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00014 Flashbutt Welding Skill Set.

### Description

This Skill Set is for individuals who weld rail using flashbutt welding in accordance with rail industry standards.

### Pathways Information

The TLISS00114 Flashbutt Welding Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI21315 Certificate II in Rail Infrastructure or equivalent.

### Licensing/Regulatory Information

Not applicable.

### Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIW30 Weld rail using flashbutt welding process  
16

### Target Group

People interested in the role of flashbutt welder within the rail infrastructure environment who have a TLI21315 Certificate II in Rail Infrastructure or equivalent.

## **Suggested words for Statement of Attainment**

This TLISS00114 Flashbutt Welding Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a flashbutt welder within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00115 Handsignaller Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00015 Handsignaller Skill Set.

## Description

This Skill Set is for individuals who perform handsignaller duties.

## Pathways Information

The TLISS00115 Handsignaller Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **2 units** of competency must be attained.

TLIF208 Safely access the rail corridor  
0

TLIF208 Perform handsignaller duties  
2

## Target Group

People interested in the role of handsignaller and are involved in protection duties in the rail corridor within the rail infrastructure environment.

## **Suggested words for Statement of Attainment**

This TLISS00115 Handsignaller Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a handsignaller operating within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00116 Install Mechanical Equipment Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00016 Install Mechanical Equipment Skill Set.

## Description

This Skill Set is for individuals who install mechanical signalling and/or locking and interlocking equipment within a rail environment.

## Pathways Information

The TLISS00116 Install Mechanical Equipment Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIS300 Install mechanical signalling locking and interlocking devices

9

## Target Group

People interested in installing mechanical equipment within a rail infrastructure environment. It is intended for operations on equipment used in mechanical signalling, locking and interlocking.

## **Suggested words for Statement of Attainment**

This TLISS00116 Install Mechanical Equipment Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who install mechanical signalling and/or locking and interlocking equipment within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

## TLISS00117 Installing Minor Structures Skill Set

### Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00017 Installing Minor Structures Skill Set.

### Description

This Skill Set is for individuals who install minor structures.

### Pathways Information

The TLISS00117 Installing Minor Structures Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI21315 Certificate II in Rail Infrastructure (Structures) or equivalent.

### Licensing/Regulatory Information

Not applicable.

### Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIS20 Install minor structures  
13

### Target Group

People interested in a role that includes installing minor structures within the rail infrastructure environment who have a TLI21315 Certificate II in Rail Infrastructure (Structures) or equivalent.

## **Suggested words for Statement of Attainment**

This TLISS00117 Installing Minor Structures Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work within the rail infrastructure environment and are required to install minor structures.

## **Custom Content Section**

Not applicable.

## TLISS00118 Installing Transoms Skill Set

### Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00018 Installing Transoms Skill Set.

### Description

This Skill Set is for individuals who install transoms.

### Pathways Information

The TLISS00118 Installing Transoms Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI21315 Certificate II in Rail Infrastructure (Structures) or equivalent.

### Licensing/Regulatory Information

Not applicable.

### Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIS20 Install and replace transoms  
28

### Target Group

People interested in a role that includes installing transoms within the rail infrastructure environment who have a TLI21315 Certificate II in Rail Infrastructure (Structures) or equivalent.

## **Suggested words for Statement of Attainment**

This TLISS00118 Installing Transoms Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work within the rail infrastructure environment and are required to install transoms.

## **Custom Content Section**

Not applicable.

# TLISS00119 Light On-track Equipment Operation Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00023 Light On-track Equipment Operation Skill Set.

## Description

This Skill Set is for individuals who propel and operate basic mechanical or hydraulic light on-track equipment.

Light on-track equipment is considered to be less than 10 tonnes that may be lifted on or off track mechanically.

## Pathways Information

The TLISS00119 Light On-track Equipment Operation Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the core units from the TLI32515 Certificate III in Rail Infrastructure or equivalent.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **2 units** of competency must be attained.

TLIB20 Apply track fundamentals  
85

TLIC20 Propel and operate light on-track equipment  
59

## **Target Group**

People interested in a role requiring the operation of light on-track equipment in the rail infrastructure environment.

## **Suggested words for Statement of Attainment**

This TLISS00119 Light On-track Equipment Operation Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who propel and operate light on-track equipment in the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

## TLISS00120 Lookout Working Skill Set

### Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00030 Lookout Working Skill Set.

### Description

This Skill Set is for individuals who perform lookout duties.

### Pathways Information

The TLISS00120 Lookout Working Skill Set is part of the TLI Transport and Logistics Training Package.

### Licensing/Regulatory Information

Not applicable.

### Skill Set Requirements

A total of **2 units** of competency must be attained.

TLIF208 Safely access the rail corridor  
0

TLIF208 Perform lookout duties  
1

### Target Group

People interested in the role of lookout within the rail infrastructure environment.

## **Suggested words for Statement of Attainment**

This TLISS00120 Lookout Working Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a lookout operating within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00121 Maintain Aerial Signal/Telecommunication Lines and Cables Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00031 Maintain Aerial Signal/Telecommunication Lines and Cables Skill Set.

## Description

This Skill Set is for individuals who maintain aerial signal/telecommunication lines and cables.

## Pathways Information

The TLISS00121 Maintain Aerial Signal/Telecommunication Lines and Cables Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIB30 Maintain aerial signal/telecommunications lines and cables  
58

## Target Group

People interested in maintaining aerial signal/telecommunication lines and cables within a rail infrastructure environment, once they have been isolated by an authorised and qualified electrical technician.

People requiring this Skill Set would also work on electrical signalling equipment as a major activity.

## **Suggested words for Statement of Attainment**

This TLISS00121 Maintain Aerial Signal/Telecommunication Lines and Cables Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who maintain aerial signal or telecommunication lines and cables operating within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00122 Maintain Bridge Bearings Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00032 Maintain Bridge Bearings Skill Set.

## Description

This Skill Set is for individuals who maintain bridge bearings.

## Pathways Information

The TLISS00122 Maintain Bridge Bearings Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI21315 Certificate II in Rail Infrastructure (Structures) or equivalent.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIB20 Maintain bridge bearings

83

## Target Group

People interested in a role that includes carrying out maintenance of bridge bearings within the rail infrastructure environment who have a TLI21315 Certificate II in Rail Infrastructure (Structures) or equivalent.

## **Suggested words for Statement of Attainment**

This TLISS00122 Maintain Bridge Bearings Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work within the rail infrastructure environment and are required to maintain bridge bearings.

## **Custom Content Section**

Not applicable.

## TLISS00123 Maintain Mechanical Equipment Skill Set

### Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00033 Maintain Mechanical Equipment Skill Set.

### Description

This Skill Set is for individuals who maintain mechanical signalling and/or locking and interlocking equipment within a rail environment.

### Pathways Information

The TLISS00123 Maintain Mechanical Equipment Skill Set is part of the TLI Transport and Logistics Training Package.

### Licensing/Regulatory Information

Not applicable.

### Skill Set Requirements

A total of **3 units** of competency must be attained.

TLIB304 Service and clean mechanical signalling equipment and infrastructure  
6

TLIB304 Repair and adjust mechanical signalling equipment and infrastructure  
7

TLIB305 Maintain mechanical signalling locking and interlocking devices  
3

## Target Group

People interested in carrying out maintenance of mechanical equipment within a rail infrastructure environment.

It is intended for operations on equipment used in mechanical signalling, locking and interlocking.

## Suggested words for Statement of Attainment

This TLISS00123 Maintain Mechanical Equipment Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who maintain mechanical signalling and/or locking and interlocking equipment.

## Custom Content Section

Not applicable.

# TLISS00124 Minor Track Equipment Operation Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00035 Minor Track Equipment Operation Skill Set.

## Description

This Skill Set is for individuals who operate minor track equipment, which covers equipment that can be lifted on or off track manually.

## Pathways Information

The TLISS00124 Minor Track Equipment Operation Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the core units from the TLI21315 Certificate II in Rail Infrastructure or equivalent.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIW30 Operate minor track equipment

27

## Target Group

People interested in the role of minor rail plant operator in the rail infrastructure environment.

## **Suggested words for Statement of Attainment**

This TLISS00124 Minor Track Equipment Operation Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a minor rail plant operator in the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00125 Operate Signalling/Point Control Equipment Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00038 Operate Signalling/Point Control Equipment Skill Set.

## Description

This Skill Set is for individuals who operate stand alone signalling and/or point control equipment as part of their job role.

While this Skill Set is not aligned to any specific qualification and can be achieved separately, it is unlikely to be used outside of a more complex job role.

## Pathways Information

The TLISS00125 Operate Signalling/Point Control Equipment Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **2 units** of competency must be attained.

TLIF208 Safely access the rail corridor  
0

TLIW30 Operate stand alone signalling/point control equipment  
26

## Target Group

People interested in the rail infrastructure or operations environment and are required to operate stand alone signalling and/or point control equipment as part of their duties.

## Suggested words for Statement of Attainment

This TLISS00125 Operate Signalling/Point Control Equipment Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work within the rail corridor environment and operate stand alone signalling and/or point control equipment.

## Custom Content Section

Not applicable.

# TLISS00126 Plan Track Possessions Protection Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00039 Plan Track Possessions Protection Skill Set.

## Description

This Skill Set is for individuals who plan and implement track possession protection as part of their job role as a protection officer.

## Pathways Information

The TLISS00126 Plan Track Possessions Protection Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **4 units** of competency must be attained.

TLIC20 Pilot rail traffic within work on track authority limits  
81

TLIF20 Safely access the rail corridor  
80

TLIF30 Conduct track protection assessment  
83

TLIL30 Implement a local possession authority  
84

## **Target Group**

People interested in the role of possession protection officer within the rail infrastructure environment and are required to plan and implement track possession protection.

## **Suggested words for Statement of Attainment**

This TLISS00126 Plan Track Possessions Protection Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a possession protection officer operating within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

## TLISS00127 Rail Adjustment Skill Set

### Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00040 Rail Adjustment Skill Set.

### Description

This Skill Set is for individuals who adjust rail.

### Pathways Information

The TLISS00127 Rail Adjustment Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the core units from the TLI21315 Certificate II in Rail Infrastructure (Track Work) or equivalent.

### Licensing/Regulatory Information

Not applicable.

### Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIB310 Adjust rail  
2

### Target Group

People interested in the role of rail adjustor within the rail infrastructure environment.

### Suggested words for Statement of Attainment

This TLISS00127 Rail Adjustment Skill Set from the TLI Transport and Logistics

Training Package meets the industry requirements for individuals who work as a rail adjustor within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00128 Rail Infrastructure Induction Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00041 Rail Infrastructure Induction Skill Set.

## Description

This Skill Set is for individuals who are new to the rail infrastructure environment.

## Pathways Information

The TLISS00128 Rail Infrastructure Induction Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **5 units** of competency must be attained.

TLIB102 Maintain and use hand tools  
8

TLID100 Shift materials safely using manual handling methods  
1

TLIF100 Follow work health and safety procedures  
1

TLIF208 Safely access the rail corridor  
0

TLIW20 Operate under track protection rules  
01

## **Target Group**

People interested in basic induction into the rail infrastructure environment. This Skill Set is intended for use by temporary workers or those who will be carrying out basic activities in the rail infrastructure environment.

## **Suggested words for Statement of Attainment**

This TLISS00128 Rail Infrastructure Induction Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who commence work within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00129 Repairing Concrete/Masonry Structures Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00043 Repairing Concrete/Masonry Structures Skill Set.

## Description

This Skill Set is for individuals who repair concrete/masonry structures.

## Pathways Information

The TLISS00129 Repairing Concrete or Masonry Structures Skill Set is part of the TLI Transport and logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI21315 Certificate II in Rail Infrastructure (Structures) or equivalent.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **2 units** of competency must be attained.

TLIB209 Repair concrete/masonry structures  
6

TLIS203 Use chemical repair products  
6

## Target Group

People interested in the role of concrete or masonry structures repairer within the rail infrastructure environment who have a TLI21315 Certificate II in Rail Infrastructure (Structures) or equivalent.

## **Suggested words for Statement of Attainment**

This TLISS00129 Repairing Concrete or Masonry Structures Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a concrete/masonry structures repairer operating within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00130 Repairing Steel Structures Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00044 Repairing Steel Structures Skill Set.

## Description

This Skill Set is for individuals who repair steel structures.

## Pathways Information

The TLISS00130 Repairing Steel Structures Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI21315 Certificate II in Rail Infrastructure (Structures) or equivalent.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **2 units** of competency must be attained.

TLIB2082 Repair steel structures

TLIW303 Apply protective coating systems to structures

4

## Target Group

People interested in the role of steel structures repairer within the rail infrastructure environment who have a TLI21315 Certificate II in Rail Infrastructure (Structures) or equivalent.

## **Suggested words for Statement of Attainment**

This TLISS00130 Repairing Steel Structures Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a steel structures repairer operating within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00131 Repairing Timber Structures Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00045 Repairing Timber Structures Skill Set.

## Description

This Skill Set is for individuals who repair timber structures.

## Pathways Information

The TLISS00131 Repairing Timber Structures Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI21315 Certificate II in Rail Infrastructure (Structures) or equivalent.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIB20 Repair timber structures

81

## Target Group

People interested in the role of timber structures repairer within the rail infrastructure environment who have a TLI21315 Certificate II in Rail Infrastructure (Structures) or equivalent.

## **Suggested words for Statement of Attainment**

This TLISS00131 Repairing Timber Structures Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a timber structures repairer operating within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00132 Suburban Network Train Driver Assistant Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00049 Suburban Network Train Driver Assistant Skill Set.

## Description

This Skill Set is for individuals who assist a suburban train driver.

## Pathways Information

The TLISS00132 Suburban Network Train Driver Assistant Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI32315 Certificate III in Electric Passenger Train Guard.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **5 units** of competency must be attained.

TLIB011 Assist with preparation of a train prior to operation  
7

TLIC301 Shunt rolling stock  
7

TLIC302 Stable a motive power unit  
7

TLIL303 Assist with train operations  
9

TLIW30 Operate stand alone signalling/point control equipment  
26

## Target Group

People interested in the role of an electric passenger train guard and required to act as Driver Assistant on diesel operated locomotives who have a TLI32315 Certificate III in Electric Passenger Train Guard.

## Suggested words for Statement of Attainment

This TLISS00132 Suburban Network Train Driver Assistant Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as an electric passenger train guard and act as a Driver Assistant on diesel operated locomotives.

## Custom Content Section

Not applicable.

## TLISS00133 Track Grinding Skill Set

### Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00050 Track Grinding Skill Set.

### Description

This Skill Set is for individuals who grind rails.

### Pathways Information

The TLISS00133 Track Grinding Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the core units from the TLI21315 Certificate II in Rail Infrastructure (Track Work) or equivalent units.

### Licensing/Regulatory Information

Not applicable.

### Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIW20 Grind rails  
12

### Target Group

People interested in the requirements to grind rail within the rail infrastructure environment.

### Suggested words for Statement of Attainment

This TLISS00133 Track Grinding Skill Set from the TLI Transport and Logistics

Training Package meets the industry requirements for individuals who work as a track grinder operating within the rail infrastructure environment and are required to grind rails as part of their job role.

## **Custom Content Section**

Not applicable.

## TLISS00134 Track Inspection Skill Set

### Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00051 Track Inspection Skill Set.

### Description

This Skill Set is for individuals who inspect track infrastructure.

### Pathways Information

The TLISS00134 Track Inspection Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI21315 Certificate II in Rail Infrastructure (Track Work) or equivalent.

### Licensing/Regulatory Information

Not applicable.

### Skill Set Requirements

A total of **2 units** of competency must be attained.

TLIB30 Examine track infrastructure  
99

TLIB31 Visually inspect track infrastructure  
00

### Target Group

People interested in the role of track inspector within the rail infrastructure environment who have a TLI21315 Certificate II in Rail Infrastructure (Track Work).

## **Suggested words for Statement of Attainment**

This TLISS00134 Track Inspection Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a track inspector operating within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

## TLISS00135 Track Lubrication Skill Set

### Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00052 Track Lubrication Skill Set.

### Description

This Skill Set is for individuals who install and/or maintain track lubrication equipment.

### Pathways Information

The TLISS00135 Track Lubrication Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI21315 Certificate II in Rail Infrastructure (Track Work) or equivalent.

### Licensing/Regulatory Information

Not applicable.

### Skill Set Requirements

A total of **2 units** of competency must be attained.

TLIB10 Clean equipment and restore worksite  
93

TLIS20 Install and service rail lubrication equipment  
12

### Target Group

People interested in the role of track lubricator within the rail infrastructure environment who have a TLI21315 Certificate II in Rail Infrastructure (Track Work) or equivalent.

## **Suggested words for Statement of Attainment**

This TLISS00135 Track Lubrication Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a track lubricator operating within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00136 Track Occupancy Protection Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00053 Track Occupancy Protection Skill Set.

## Description

This Skill Set is for individuals who are required to implement track occupancy protection as part of their job role as a protection officer.

## Pathways Information

The TLISS00136 Track Occupancy Protection Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **4 units** of competency must be attained.

TLIC208 Pilot rail traffic within work on track authority limits  
1

TLIF208 Safely access the rail corridor  
0

TLIF308 Conduct track protection assessment  
3

TLIL306 Implement a track occupancy authority  
5

## **Target Group**

People interested in the role of protection officer within the rail infrastructure environment and are required to implement track occupancy protection.

## **Suggested words for Statement of Attainment**

This TLISS00136 Track Occupancy Protection Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a protection officer operating within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

## TLISS00137 Track Patrol Skill Set

### Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00054 Track Patrol Skill Set.

### Description

This Skill Set is for individuals who patrol track infrastructure.

### Pathways Information

The TLISS00137 Track Patrol Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI21315 Certificate II in Rail Infrastructure (Track Work) or equivalent.

### Licensing/Regulatory Information

Not applicable.

### Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIB31 Visually inspect track infrastructure  
00

### Target Group

People interested in the role of track patroller within the rail infrastructure environment who have a TLI21315 Certificate II in Rail Infrastructure (Track Work) or equivalent.

## **Suggested words for Statement of Attainment**

This TLISS00137 Track Patrol Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a track patroller operating within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00138 Travel Medium/Heavy On-Track Equipment Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00055 Travel Medium/Heavy On-track Equipment Skill Set.

## Description

This Skill Set is for individuals who travel medium or heavy on-track equipment.

Medium or heavy on-track equipment is considered to weigh more than 10 tonnes and is permanently railed.

## Pathways Information

The TLISS00138 Travel Medium/Heavy On-Track Equipment Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the core units from TLI21315 Certificate II in Rail Infrastructure or equivalent.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **2 units** of competency must be attained.

TLIB20 Apply track fundamentals  
85

TLIC20 Travel medium or heavy self-propelled on-track equipment  
58

## Target Group

People interested in a role that requires medium or heavy on-track equipment to be travelled in the rail infrastructure environment.

## Suggested words for Statement of Attainment

This TLISS00138 Travel Medium/Heavy On-Track Equipment Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who are required to travel medium or heavy on-track equipment in the rail infrastructure environment.

## Custom Content Section

Not applicable.

# TLISS00139 Travel Track Vehicle Under Block Working Conditions Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00056 Travel Track Vehicle Under Block Working Conditions Skill Set.

## Description

This Skill Set is for individuals who are required to access rail track to travel a track vehicle under block working conditions as part of their job role.

## Pathways Information

The TLISS00139 Travel Track Vehicle Under Block Working Conditions Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **2 units** of competency must be attained.

TLIC008 Access rail track to travel track vehicles under manual block working  
4 conditions

TLIF208 Safely access the rail corridor  
0

## Target Group

People interested in the role of track vehicle operator working specifically under block working conditions within the rail infrastructure environment.

## **Suggested words for Statement of Attainment**

This TLISS00139 Travel Track Vehicle Under Block Working Conditions Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a track vehicle operator within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

# TLISS00140 Travel Track Vehicle Under Occupancy Authority Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00057 Travel Track Vehicle Under Occupancy Authority Skill Set.

## Description

This Skill Set is for individuals who are required to access rail track to travel a track vehicle under occupancy authority as part of their job role.

## Pathways Information

The TLISS00140 Travel Track Vehicle Under Occupancy Authority Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **3 units** of competency must be attained.

TLIC008 Access rail track to travel track vehicle under a proceed authority  
3

TLIC205 Access rail track to run track vehicle within a defined worksite  
4

TLIF208 Safely access the rail corridor  
0

## Target Group

People interested in the role of track vehicle operator working specifically under occupancy authorities within the rail infrastructure environment.

## Suggested words for Statement of Attainment

This TLISS00140 Travel Track Vehicle Under Occupancy Authority Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a track vehicle operator within the rail infrastructure environment.

## Custom Content Section

Not applicable.

# TLISS00141 Ultrasonic Points and Crossings Testing Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00060 Ultrasonic Points and Crossings Testing Skill Set.

## Description

This Skill Set is for individuals who test points and crossings using ultrasonic equipment.

## Pathways Information

The TLISS00141 Ultrasonic Points and Crossings Testing Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI21315 Certificate II in Rail Infrastructure (Track Work) or a recognised qualification in nondestructive testing equivalent to a Certificate II or above.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **2 units** of competency must be attained.

TLIS301 Test rail using ultrasonic equipment  
0

TLIS301 Test rail using nondestructive testing equipment  
1

## Target Group

People interested in testing points and crossings using either ultrasonic or nondestructive testing equipment in the rail infrastructure environment who have a TLI21315 Certificate II in Rail Infrastructure (Track Work) or a recognised qualification in nondestructive testing equivalent to a Certificate II or above.

## Suggested words for Statement of Attainment

This TLISS00141 Ultrasonic Points and Crossings Testing Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as an ultrasonic points and crossings tester operating within the rail infrastructure environment.

## Custom Content Section

Not applicable.

## TLISS00142 Ultrasonic Rail Testing Skill Set

### Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00061 Ultrasonic Rail Testing Skill Set.

### Description

This Skill Set is for individuals who test rail using ultrasonic equipment.

### Pathways Information

The TLISS00142 Ultrasonic Rail Testing Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI21315 Certificate II in Rail Infrastructure (Track Work) or a recognised qualification in nondestructive testing equivalent to a Certificate II or above.

### Licensing/Regulatory Information

Not applicable.

### Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIS30 Test rail using ultrasonic equipment  
10

### Target Group

People interested in the role of ultrasonic rail tester within the rail infrastructure environment who have a TLI21315 Certificate II in Rail Infrastructure (Track Work) or a recognised qualification in nondestructive testing equivalent to a Certificate II or above.

## **Suggested words for Statement of Attainment**

This TLISS00142 Ultrasonic Rail Testing Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as an ultrasonic rail tester operating within the rail infrastructure environment.

## **Custom Content Section**

Not applicable.

## TLISS00143 Certify Rolling Stock Skill Set

### Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00062 Certify Rolling Stock Skill Set.

### Description

This Skill Set is for individuals who certify rolling stock as fit for operation following maintenance activities.

### Pathways Information

The TLISS00143 Certify Rolling Stock Skill Set is part of the TLI Transport and Logistics Training Package.

### Licensing/Regulatory Information

Not applicable.

### Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIB01 Certify rolling stock prior to handover  
27

### Target Group

People interested in the certification of rolling stock prior to its return to operation. This may be certification of new rolling stock or following maintenance activities.

### Suggested words for Statement of Attainment

This TLISS00143 Certify Rolling Stock Skill Set from the TLI Transport and

Logistics Training Package meets the industry requirements for individuals who work within the rail maintenance environment and are required to certify rolling stock prior to its return to operation.

## **Custom Content Section**

Not applicable.

# TLISS00144 Move Rolling Stock Within Defined Limits Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00063 Move Rolling Stock Within Defined Limits Skill Set.

## Description

This Skill Set is for individuals who move rolling stock within defined limits. This would occur within a rail yard, private siding or maintenance operation.

## Pathways Information

The TLISS00144 Move Rolling Stock Within Defined Limits Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **4 units** of competency must be attained.

TLIB012 Conduct pre-movement checks on motive power units  
8

TLIB013 Start up and shut down a single locomotive  
2

TLIB312 Conduct pre-movement checks on rolling stock  
9

TLIC007 Operate a motive power unit within defined limits  
9

## Target Group

People interested in rail safety worker requirements for safely moving rolling stock within defined limits.

## Suggested words for Statement of Attainment

This TLISS00144 Move Rolling Stock Within Defined Limits Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work within the rail environment and are required to carry out rail safety activities including moving rolling stock within a rail yard, terminus or private siding.

## Custom Content Section

Not applicable.

## TLISS00145 Rail Maintainer Skill Set

### Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00064 Rail Maintainer Skill Set.

### Description

This Skill Set is for individuals who carry out rail maintenance activities within a rail yard or maintenance facility. It covers the rail safe working aspects of the rail maintainer job roles.

### Pathways Information

The TLISS00145 Rail Maintainer Skill Set is part of the TLI Transport and Logistics Training Package.

### Licensing/Regulatory Information

Not applicable.

### Skill Set Requirements

A total of **5 units** of competency must be attained.

TLIB21 Apply awareness of fundamentals of rail operations in yards or sidings  
22

TLIB30 Test train braking system  
19

TLIB31 Apply awareness of motive power unit fundamentals  
23

TLIB31 Conduct pre-movement checks on rolling stock  
29

TLIF00 Apply personal and equipment lockouts for rolling stock  
98

## **Target Group**

People interested in maintaining rolling stock.

## **Suggested words for Statement of Attainment**

This TLISS00145 Rail Maintainer Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work within the rail maintenance environment and are required to carry out rail safety activities.

## **Custom Content Section**

Not applicable.

# TLISS00146 Tram or Light Rail Turnout Construction Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00065 Tram or Light Rail Turnout Construction Skill Set.

## Description

This Skill Set is for individuals who are required to construct turnouts for tram or light rail systems.

## Pathways Information

The TLISS00146 Tram or Light Rail Turnout Construction Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI22215 Certificate II in Tram or Light Rail Infrastructure.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIS30 Construct concrete or steel points and crossings  
40

## Target Group

People interested in a role required to construct tram or light rail turnouts who have a TLI22215 Certificate II in Tram or Light Rail Infrastructure.

## **Suggested words for Statement of Attainment**

This TLISS00146 Tram or Light Rail Turnout Construction Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work within the tram or light rail infrastructure environment and are required to construct turnouts.

## **Custom Content Section**

Not applicable.

# TLISS00147 Tram or Light Rail Turnout Installation Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00066 Tram or Light Rail Turnout Installation Skill Set.

## Description

This Skill Set is for individuals who are required to install turnouts on a tram or light rail system.

## Pathways Information

The TLISS00147 Tram or Light Rail Turnout Installation Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI22215 Certificate II in Tram or Light Rail Infrastructure.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIS30  
45      Install turnouts

## Target Group

People interested in a role required to install turnouts on tram or light rail tracks who have a TLI22215 Certificate II in Tram or Light Rail Infrastructure.

## **Suggested words for Statement of Attainment**

This TLISS00147 Tram or Light Rail Turnout Installation Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work within the tram or light rail infrastructure environment and are required to install turnouts.

## **Custom Content Section**

Not applicable.

## TLISS00148 Submerged ARC Welding Skill Set

### Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00067 Submerged ARC Welding Skill Set.

### Description

This Skill Set is for individuals who are required to carry out submerged ARC welding to tram or light rail tracks.

### Pathways Information

The TLISS00148 Submerged ARC Welding Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI32915 Certificate III in Tram or Light Rail Infrastructure.

### Licensing/Regulatory Information

Not applicable.

### Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIW00 Weld rail on tram/light rail systems using submerged ARC welding process  
44

### Target Group

People interested in a role carrying out submerged arc welding on tram or light rail tracks including straight track, and points and crossings who have a TLI32915 Certificate III in Tram or Light Rail Infrastructure.

## **Suggested words for Statement of Attainment**

This TLISS00148 Submerged ARC Welding Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work within the tram or light rail infrastructure environment and are required to carry out submerged ARC welding on tram or light rail tracks.

## **Custom Content Section**

Not applicable.

# TLISS00149 Tram or Light Rail Track Inspection Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00068 Tram or Light Rail Track Inspection Skill Set.

## Description

This Skill Set is for individuals who are required to inspect tram or light rail tracks to ensure they are fit for operations.

## Pathways Information

The TLISS00149 Tram or Light Rail Track Inspection Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI22215 Certificate II in Tram or Light Rail Infrastructure.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **2 units** of competency must be attained.

TLIB30  
99 Examine track infrastructure

TLIB31  
00 Visually inspect track infrastructure

## Target Group

People interested in the role of a tram or light rail track inspector who have a TLI22215 Certificate II in Tram or Light Rail Infrastructure.

## Suggested words for Statement of Attainment

This TLISS00149 Tram or Light Rail Track Inspection Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work as a tram or light rail track inspector operating within the tram or light rail infrastructure environment.

## Custom Content Section

Not applicable.

# TLISS00150 Tram or Light Rail Track Sweeping Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00069 Tram or Light Rail Track Sweeping Skill Set.

## Description

This Skill Set is for individuals who are required to operate specialised equipment to carry out track cleaning operations on tram or light rail tracks.

## Pathways Information

The TLISS00150 Tram or Light Rail Track Sweeping Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI32915 Certificate III in Tram or Light Rail Infrastructure.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **1 unit** of competency must be attained.

TLIC00 Conduct tram/light rail track cleaning operations

73

## Target Group

People interested in a role that is required to operate tram or light rail track cleaning equipment on tram or light rail tracks including straight track, and points and crossings who have a TLI32915 Certificate III in Tram or Light Rail Infrastructure.

## **Suggested words for Statement of Attainment**

This TLISS00150 Tram or Light Rail Track Sweeping Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work within the tram or light rail infrastructure environment and are required to operate tram or light rail track cleaning equipment on tram or light rail tracks.

## **Custom Content Section**

Not applicable.

## TLISS00151 Lead Shunter Skill Set

### Modification History

Release 1. New Skill Set

This Skill Set replaces and is equivalent to the TLISS00071 Lead Shunter Skill Set.

### Description

This Skill Set is for individuals who carry out the duties of a lead shunter within a rail yard, rail terminal or rail sidings.

### Pathways Information

The TLISS00151 Lead Shunter Skill Set is part of the TLI Transport and Logistics Training Package.

This Skill Set is only to be undertaken in addition to the TLI22015 Certificate II in Shunting.

### Licensing/Regulatory Information

Not applicable.

### Skill Set Requirements

A total of **3 units** of competency must be attained.

TLIF30 Apply safeworking rules and regulations to rail functions  
58

TLIF30 Apply local incident response procedures  
85

TLIG30 Lead a work team or group  
02

## Target Group

People working as a lead shunter/senior terminal operator providing guidance to one or more shunters/terminal operators within a rail yard or terminal who have a TLI22015 Certificate II in Shunting.

## Suggested words for Statement of Attainment

The TLISS00151 Lead Shunter Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work within the rail maintenance environment and are required to provide leadership to other shunters.

## Custom Content Section

Not applicable.

# TLISS00152 Rail Operations Safeworking Skill Set

## Modification History

Release 1. New Skill Set

This Skill Set replaces and is equivalent to the TLISS00077 Rail Operations Safeworking Skill Set.

## Description

This Skill is for individuals who are required to apply safeworking as part of their duties within a rail operations environment.

## Pathways Information

The TLISS00152 Rail Operations Safeworking Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **3 units** of competency must be attained.

TLIC20 Identify and respond to signals and trackside signs  
78

TLIF20 Safely access the rail corridor  
80

TLIF30 Apply safeworking rules and regulations to rail functions  
58

## **Target Group**

People who have a TLI22315 Certificate II in Rail Customer Service or higher qualification, work in a rail operations environment and are required to apply limited safeworking activities as part of their duties.

## **Suggested words for Statement of Attainment**

The TLISS00152 Rail Operations Safeworking Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work within a rail operations environment and are required to carry out safeworking activities.

## **Custom Content Section**

Not applicable.

# TLISS00153 Rail Signal Panel Operation Skill Set

## Modification History

Release 1. New Skill Set.

This Skill Set replaces and is equivalent to the TLISS00078 Rail Signal Panel Operation Skill Set.

## Description

This Skill Set is for individuals who are required to operate a rail signal panel as part of their duties within a rail operations environment.

## Pathways Information

The TLISS00153 Rail Signal Panel Operation Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **5 units** of competency must be attained.

TLIC207 Identify and respond to signals and trackside signs  
8

TLIF208 Safely access the rail corridor  
0

TLIF305 Apply safeworking rules and regulations to rail functions  
8

TLIL307 Operate signal panel or equipment  
2

TLIW20 Clip and secure points  
37

## **Target Group**

People interested in working in a rail operations environment and are required to operate a signal panel or signalling equipment as part of their duties.

## **Suggested words for Statement of Attainment**

This TLISS00153 Rail Signal Panel Operation Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work within the rail environment and are required to operate a signal panel or signalling equipment.

## **Custom Content Section**

Not applicable.

# TLISS00154 Train Buffet Operation Skill Set

## Modification History

Release 1. New Skill Set

This Skill Set replaces and is equivalent to the TLISS00089 Train Buffet Operation Skill Set.

## Description

This Skill Set is for individuals required to operate a buffet service on a train as part of their duties within a rail operations environment.

## Pathways Information

The TLISS00154 Train Buffet Operation Skill Set is part of the TLI Transport and Logistics Training Package.

## Licensing/Regulatory Information

Not applicable.

## Skill Set Requirements

A total of **4 units** of competency must be attained.

SITXFSA1 Use hygienic practices for food safety  
01

TLII2015 Operate the on-train buffet car

TLII3009 Provide on-board services to customers

TLIL2048 Prepare for train departure

## Target Group

People working on a train who are required to buffet services as part of their duties.

## **Suggested words for Statement of Attainment**

The TLISS00154 Train Buffet Operation Skill Set from the TLI Transport and Logistics Training Package meets the industry requirements for individuals who work within the rail environment and are required to carry out train buffet service activities.

## **Custom Content Section**

Not applicable.
